# A clear vision, a solid path

## Technology and innovation for over 30 years

At Maxa, we design, build, and distribute heating and air conditioning systems with a clear goal in mind: to offer solutions that improve people's comfort and contribute to a more sustainable future. This is not just a statement of intent, but the mission that has guided every decision we have made since the company was founded.

Founded in 1992 thanks to the entrepreneurial intuition of Luciano Tredicesimo Ferroli, Maxa has grown to become one of the top five Italian companies in the production of heat pumps. A journey built on

innovation, quality, and strategic vision.

Today, under the leadership of his sons Paolo, David, and Simone, Maxa continues to evolve, maintaining its original values and focusing on cutting-edge technologies, Made in Italy production, and attention to the environment.

Every day, our team works passionately to develop solutions that combine energy efficiency, comfort, and sustainability, responding to the needs of a constantly changing market.

1992

### The Beginnings

In 1992, the MAXA project began, entering the residential air conditioning sector, which was in its infancy at the time. The first warehouse and workshop is inaugurated in Villanova di San Bonifacio. Growth continues thanks to the economic development of the air conditioning market, and in 2004 we become a joint-stock company.

2005

### The Expansion

Since 2005, the decision has been made to expand sales activities abroad, thus beginning a process of growth that has led Maxa to become a well-known brand on international markets.

2010

### Our production

In 2010, the first production line for 5 to 15 kW inverter heat pumps was opened, riding the first signs of renewal in the heating market with alternative products to boilers, and supported by the possibility of exploiting new environmentally friendly technologies. Since 2011, Maxa has been equipped with an M1 climate chamber for testing units with up to 100 kW of cooling capacity on chillers and heat pumps.

2016

### The expansion

A process of growth and expansion began in Maxa's production department, leading us in 2016, following the construction of the fifth line, to develop the production of heat pumps up to 115 kW. All this makes it necessary to expand the company and build a new 7,100 m<sup>2</sup> factory, in addition to the existing 7,800 m<sup>2</sup>.

2024

### Innovation

In 2019, we inaugurated eight production lines. In 2023, three new lines of heat pumps using R290 gas were introduced and the new M2 climate chamber was inaugurated for in-depth performance testing. In 2024, the historic payoff line "Air Conditioning" is replaced with the more appropriate and modern "Heating and Cooling." The reason for the change lies in the need to further strengthen our identity as a Made in Italy manufacturer in the heating and cooling sector.

2025

### The New Plant

At the beginning of 2025, work began on the construction of a new 7,100 m<sup>2</sup> facility, which will house the new logistics center and electronics production laboratories. The expansion of the facility represents a concrete step toward the future.

# Innovation, Performance, Reliability

## Our commitment to the future of air conditioning

With a vision focused on excellence and sustainability, we design and manufacture solutions for residential, commercial, industrial, and tertiary air conditioning.

Thanks to a department **Research & Development** At the cutting edge, our product range is among the most comprehensive and competitive in Europe, offering increasingly efficient and sustainable technologies.

What truly sets us apart is our production capacity. We have:

- **8 production lines** dedicated to the production of inverter heat pumps, designed to respond flexibly and quickly to market demands;
- **2 climate-controlled rooms** (M1 and M2) capable of testing units up to 800 kW, ensuring maximum precision in performance verification. A strategic asset that allows us to confidently declare what our products are capable of doing.

### A strategic investment in the future

Our headquarters in Arcole covers a total area of 42,000 square meters, housing offices, a 7,000-square-meter warehouse for storing finished products and spare parts, and a 7,800-square-meter production area that houses our eight production lines.

Between 2025 and 2026, this industrial hub will undergo a major expansion: an additional 6,600 square meters will be added to further enhance production and logistics capacity.

A strategic investment that not only strengthens our operational efficiency, but also allows us to respond more quickly and flexibly to market needs, integrate new technologies, and consolidate our role as a leader in the HVAC sector.

The expansion of the plant represents a concrete step towards the future, with the aim of guaranteeing quality, innovation, and constant availability of our products.

Maxa constantly invests in quality control through modern testing procedures and advanced monitoring systems to ensure maximum performance, efficiency and reliability of all HVAC units.

# i-290 Inverter Heat Pumps

## Efficiency, Comfort and Environmental Sustainability

Solutions that maximize energy efficiency for heating, cooling, and domestic hot water production, ensuring a high level of environmental sustainability.

The use of **natural refrigerant R290** enables high performance with full respect for the environment, ensuring comfort and energy savings in residential, commercial and industrial applications.

The range is designed to adapt to diverse application contexts: **14 models** are available, with capacities from **6 to 50 kW**, offering versatility, reliability, and tailored performance.

**78°C**

Maximum water supply temperature up to 78°C, guaranteed on a continuous basis.

**-20/+46°C**

Perfect for any climate thanks to the wide operating range from -20°C to +46°C.

**350 kw**

Single units of 6 to 50 kW which, when configured in cascade, can reach a maximum of 350 kW.

**A+++**

Energy efficiency class up to A+++.

**GWP = 0,02**

R290 eco-friendly gas with very low climate impact, for sustainable applications.

**Design**

Unique design and modern aesthetics facilitate architectural integration in every context.

**Made In Italy**

Range conceived, designed and produced by Maxa in the Arcole plant (Italy).

**Easy Plug**

All components have been arranged to facilitate the installation operations as much as possible.

### Maximum respect for the environment

The **eco-friendly gas R290**, with an extremely low GWP of just 0.02 (Global Warming Potential), drastically reduces environmental impact compared to traditional gases, delivering a concrete improvement in environmental sustainability. This means that the environmental impact of R290 gas on global warming is very low.

### Ease of Installation

The heat pumps in the i-290 range are designed for quick and straightforward commissioning. Thanks to the hydraulic connections located at the rear of the heat pump, where the electrical service terminal blocks are also positioned, installation and commissioning are significantly simplified.

### Solution suitable for every system

The i-290 range can be perfectly and rapidly integrated both into new buildings and in combination with existing systems, allowing highly efficient operation with both radiant underfloor systems and traditional systems with high-temperature water. Numerous accessories and configurations make it possible to customize the equipment of each heat pump.

### Reduced refrigerant charge

The i-290 heat pumps ensure a significantly reduced refrigerant charge compared to traditional R32 solutions. For the same heating capacity, the amount of R290 required is considerably lower, with values that remain limited even in the higher-capacity models.

### High level of safety

The i-290 heat pumps guarantee high safety standards. In sizes from 0106 to 0127, the use of **antispark components** always ensures safe operation of the heat pump. In the larger sizes, 0240 and 0250, the use of **leak detection sensors**, installed directly inside the heat pumps, determines their overall safety.

The i-290 heat pumps up to size 0127 are also equipped as standard with a **air separator** that continuously removes any air and gas present in the hydraulic circuit.

The internal filter creates turbulence, promoting the separation of micro-bubbles, which are then automatically expelled by a float valve. This component improves efficiency, reduces noise and extends the service life of the system.

### Assured performance all year round

The indispensable comfort ensured by domestic water systems, and the resulting increase in demand for domestic hot water, are perfectly met by i-290 technology, which confirms and extends the application range of heat pumps designed for this purpose. The i-290 range makes it possible to produce technical hot water under any outdoor temperature condition, from +46°C down to -20°C.

# i-290 0106÷0118

## Monobloc inverter air-to-water reversible heat pump with R290

6 kW÷18 kW

The latest evolution of MAXA's full inverter heat pump technology uses the eco-friendly refrigerant gas R290. This new evolutionary step further simplifies the design of systems fully managed by the heat pump alone. In fact, thanks to the 75°C maximum water temperature achievable with the i-290 range, application on systems requiring high supply temperatures is also very straightforward. Finally, the direct replacement of existing systems that previously operated with combustion appliances is very manageable.

### Construction Features

- Proprietary control system with microcontroller-based regulation, superheat control logic via electronic expansion valve.
- Compressor: Twin Rotary DC inverter.
- Fans: axial type with brushless DC motor.
- Source heat exchanger: finned coil with copper tubes and aluminum fins with hydrophilic coating.
- User plate heat exchanger with AISI 304 stainless steel brazed plates, featuring low pressure drop on the water side.
- Refrigerant circuit made of copper tubing, including: condensing pressure control, electronic thermostatic valve, reversing valve, high-pressure switch, liquid separator, pressure tapping point, bidirectional metal mesh filters, high- and low-pressure transducers.
- Integrated hydraulic circuit with high-efficiency variable-speed brushless circulator, flow meter, deaerator with air vent valve, 3-bar overpressure valve, and system filling and drain cock.
- The SL version ensures reduced sound emissions, particularly with regard to standard EN12102-1:2022. The reduction of the sound power level under A7/W55 conditions is between 2 and 4 dB(A).

### Logics and Controls:

- All units can operate in three different modes: heating, cooling, and domestic hot water, with specific programs that maximize performance in all conditions, including optional control via climatic compensation curve.
- The i-290 series units are capable of managing mixing valves, diverting valves and secondary-side circulation pumps; they are also able to control the solar thermal system, any integration with external heat sources, and integration with external Home/Building Automation or Home Automation systems.
- ModBus RTU available as standard.
- All units in the i-290 series (0106/0118) are supplied as standard with the e-Pro wired controller, providing complete control of the heat pump both locally and remotely via connectivity, once connected to the Wi-Fi network.
- Thanks to the MyMaxa app, you can associate one or more MAXA heat pump installations with your user profile and thus obtain full remote control of them.

### Operating Areas

Tw: water temperature - Ta: outdoor air temperature

## Accessories

### Factory-installed

- **KA** - Antifreeze kit (heat exchanger + base) – includes the use of a self-heating cable that is glued to the base of the unit near the condenser coil, and a PET heater positioned on the plate heat exchanger face.
- **KA3** - Antifreeze kit (base only) - provides exclusively for the use of a self-heating cable that is applied to the base of the unit near the condensing coil.
- **TR2** - Anti-corrosion treatment for coils – thanks to the treatment, the coil becomes flexible to withstand thermal expansion and contraction, mechanically resistant, protected against UV rays and dirt-repellent. Heat transfer losses are very limited. The treatment ensures coil protection in virtually all environmental conditions: from coastal to rural areas, from

industrial to urban zones. The treatment withstands 6000 h according to ASTM B117.

- **TR2C4** - Anti-corrosion treatment on coil and sheet metal – includes a TR2-type treatment on the coil and, in addition, the hot-dip galvanized steel panels are painted so as to make them suitable for unit installation in C4H environments, in accordance with UNI EN 12944. The external fastening hardware is made of AISI 304 material, class A2. The treatment also includes the fan protection grille, while the galvanized sheets inside the unit (electrical panel casing and inductances) are excluded.
- **RP** - Coil protective grilles – wire mesh to prevent foreign objects from entering the coil and to protect the coil from accidental contact with objects or people.

### Provided separately

- **SAS** - Domestic hot water probe / Remote system probe – in some system configurations (e.g. heat pump in parallel with the boiler on the same hydronic circuit and diverter valve for boiler exclusion), it may be necessary to enable a system temperature probe so that the unit controller can correctly manage the operation. The remote system probe controls the heat pump temperature only during the compressor start-up phase; shutdown is managed by the probe located on the heat pump flow line.
- **SPS** - Solar panel probe for GI3 – probe required to measure the temperature of the solar panels when the unit is integrated with a solar thermal system.
- **AG** - Anti-vibration kit – designed to prevent transmission of vibrations to the structure; must be installed under the unit, in the dedicated mounting holes.
- **VRC** - Condensate drip tray – galvanized sheet metal container to be installed at the base of the unit for collecting condensate water.
- **FY** - Y-strainer – contains a stainless steel mesh screen (500 µm filtration) that collects solid materials present in the water. Filtration prevents blockage and/or damage to the devices installed downstream of the strainer. Alternatively, it is possible to install a dirt separator that ensures a filtration level not greater than 1 mm (in this case, it is no longer necessary to install the Y-strainer).
- **FD** - Dirt separator – allows the heavier impurities present in the hydraulic circuit to be stopped and retained, as they are captured by a synthetic filter mesh and collected in a settling chamber. A magnetic device located inside the body of the dirt separator also makes it possible to trap ferromagnetic particles.
- **VDIS2** - Diverting valve – 3-way motorized ball valve DN (1"1/4) Kvs 19.2, 1" 1/2 MMM connections, complete with actuator.
- **ACT** - Technical storage tank (see dedicated section).
- **VSA** - Anti-freeze thermal discharge valve – a valve capable of opening at 0°C to prevent ice formation inside the pipes.
- **RP** - Coil protection grilles – wire mesh to prevent foreign objects from entering the coil and to protect the coil from accidental contact with objects or people (supplied as a

separate accessory and to be installed by the installer).

- **e-LITE\*\*** - Color touch-screen wired controller, which can be used as a remote keypad for the heat pump, as it replicates the functions of the on-board unit display. It is equipped with local temperature sensing and time scheduling.
- **Hi-TV415\*\*** - Color touchscreen wired remote controller for centralized management of a chiller/heat pump cascade, for up to 7 units.
- **Connect Box\*\*** - Wi-Fi communication gateway for the Maxa Connect App.
- **GI3\*\*** - External system management module – enables management of the following functions: recirculation pump control, plant-side mixing valve control, solar thermal integration control.
- **ISK\*\*** - USB/RS485 serial converter – interface device capable of reading and writing control registers via the RS485 standard and converting them to a USB port that can be connected to any supervision system.
- **LNC\*\*** - LAN-Wi-Fi router – device that allows the unit to be connected to a local network via Ethernet cable or Wi-Fi coverage for remote monitoring.
- **OPN\*\*** - 3G LAN-Wi-Fi router with VPN tunnel – device that allows the unit to be connected remotely with an industrial router using the secure OPENVPN service.

## Monobloc inverter air-to-water reversible heat pump with R290

21 kW÷27 kW

Range of heat pumps from 21 to 27 kW, equipped with eco-friendly R290 refrigerant gas, representing the most advanced evolution of full inverter technology.

The 21 to 27 kW range is able to reach a maximum water temperature of 78°C; this feature allows it to be combined with a wide variety of heating systems. Ideal for replacing combustion-based systems, it ensures simple installation and optimal energy efficiency, with a reduced environmental impact.

### Construction Features

- Proprietary control system with microcontroller-based regulation, superheat control logic via electronic expansion valve.
- Compressors: DC inverter scroll.
- Fans: axial type with brushless DC motor.
- Source heat exchanger: optimized with a finned coil circuit, copper tubes and aluminum fins.
- User plate heat exchanger with AISI 304 stainless steel brazed plates, featuring low pressure drop on the water side.
- Refrigerant circuit made of copper tubing, including: condensation control, electronic thermostatic valve, reversing valve, high-pressure switch, liquid separator, liquid receiver, pressure tapping point, unidirectional filter-drier, high- and low-pressure transducers.
- Integrated hydraulic circuit with high-efficiency variable-speed brushless circulator, flow meter, deaerator with air vent valve, 6 bar overpressure valve, and system filling and drain cock.

### Logics and Controls:

- All units can operate in three different modes: heating, cooling, and domestic hot water, with specific programs that maximize performance in all conditions, including optional control via climatic compensation curve.
- The i-290 series units are capable of managing mixing valves, diverting valves and secondary-side circulation pumps; they are also able to control the solar thermal system, any integration with external heat sources, and integration with external Home/Building Automation or Home Automation systems.
- ModBus RTU available as "CM" accessory.
- All units in the i-290 (0121/0127) series are equipped as standard with the e-Pro wired controller, providing full control of the heat pump both locally and remotely via connectivity, once connected to the Wi-Fi network.
- Thanks to the MyMaxa app, you can associate one or more MAXA heat pump installations with your user profile and thus obtain full remote control of them.

### Operating Areas

Tw: water temperature - Ta: outdoor air temperature

## Accessories

### Factory-installed

- **KA \*** - Anti-freeze kit (heat exchanger + base) – uses a self-heating cable that is bonded to the base of the unit near the condensing coil, and a PET heater positioned on the plate heat exchanger face.
- **KA3 \*** - Anti-freeze kit (base only) – provides exclusively for the use of a self-heating cable applied to the base of the unit near the condenser coil.
- **TR2** - Anti-corrosion treatment for coils – thanks to the treatment, the coil becomes flexible to withstand thermal contractions and expansions, mechanically resistant, protected against UV rays and repellent to dirt. Heat transfer losses are very limited. The treatment guarantees protection of the coils under virtually all environmental conditions: from coastal to rural areas, from industrial to urban zones. The treatment withstands 6000 h in accordance with ASTM B117.
- **TR2C4** - Anti-corrosion treatment on coil and sheet metal – includes a TR2-type treatment of the coil and, in addition,

the hot-dip galvanized steel panels are painted to make them suitable for unit installation in C4H environments, in accordance with UNI EN 12944. The external fastening hardware is made of AISI 304, class A2. The treatment also includes the fan protection grille, while the galvanized sheet metal inside the unit (electrical panel casing and inductors) is excluded.

- **RP** - Coil protective grilles – wire mesh to prevent foreign objects from entering the coil and to protect the coil from accidental contact with objects or people.
- **CM** - BMS connectivity setup – ModBus protocol included – accessory that enables the connection of the unit to external controllers via serial cable with RS-485 electrical standard and ModBus RTU protocol.
- **SSL** - thanks to the use of dedicated acoustic panels, ensures low noise emissions, particularly with regard to the EN12102-1:2022 standard. The reduction of the sound power level under A7/W55 conditions reaches 7 dB(A).

### Provided separately

- **SAS** - DHW sensor / Remote system sensor – in some system configurations (e.g. heat pump in parallel with the boiler on the same hydronic circuit and diverter valve for exclusion) it may be necessary to enable a system temperature sensor so that the unit-mounted controller can correctly manage operation.  
  
The remote system sensor controls the heat pump temperature only during the compressor start-up phase; shutdown is managed by the sensor installed on the heat pump flow line.
- **SPS** - Solar panel probe for GI3 – probe required to measure the temperature of the solar panels when the unit is integrated with a solar thermal system.
- **AG** - Anti-vibration kit – designed to prevent transmission of vibrations to the structure; must be installed under the unit, in the dedicated mounting holes.
- **VRC** - Condensate drip tray – galvanized sheet metal container to be installed at the base of the unit for collecting condensate water.
- **FY** - Y-strainer – contains a stainless steel mesh screen (500 µm filtration) that collects solid materials present in the water. Filtration prevents blockage and/or damage to the devices installed downstream of the strainer. Alternatively, it is possible to install a dirt separator that ensures a filtration level not greater than 1 mm (in this case, it is no longer necessary to install the Y-strainer).
- **FD** - Dirt separator – allows the heavier impurities present in the hydraulic circuit to be stopped and retained, as they are captured by a synthetic filter mesh and collected in a settling chamber. A magnetic device located inside the body of the dirt separator also makes it possible to trap ferromagnetic particles.
- **VDIS3** - Diverter valve – 3-way motorized ball valve Kvs 20.8, 1" 1/4 F connections, complete with actuator.
- **ACT** - Technical storage tank (see dedicated section)
- **VSA** - Anti-freeze thermal discharge valve – a valve capable of opening at 0°C to prevent ice formation inside the pipes.

- **RP** - Coil protection grilles – wire mesh to prevent foreign objects from entering the coil and to protect the coil from accidental contact with objects or people (supplied as a separate accessory and to be installed by the installer).
- **e-LITE\*\*** - Color touch-screen wired controller, which can be used as a remote keypad for the heat pump, as it replicates the functions of the on-board unit display. It is equipped with local temperature sensing and time scheduling.
- **Hi-TV415\*\*** - Color touchscreen wired remote controller for centralized management of a chiller/heat pump cascade, for up to 7 units.
- **Connect Box\*\*** - Wi-Fi communication gateway for the Maxa Connect App.
- **GI3\*\*** - External system management module - enables management of the following functions: recirculation pump control, plant-side mixing valve control, solar thermal integration control.
- **ISK\*\*** - USB/RS485 serial converter – interface device capable of reading and writing control registers via the RS485 standard and converting them to a USB port that can be connected to any supervision system.
- **LNC\*\*** - LAN-Wi-Fi router – device that allows the unit to be connected to a local network via Ethernet cable or Wi-Fi coverage for remote monitoring.
- **OVPN\*\*** - 3G LAN-Wi-Fi router with VPN tunnel – device that allows the unit to be connected remotely with an industrial router using the secure OPENVPN service.

# i-290 0240÷0250

## Monobloc inverter air-to-water reversible heat pump with R290

40 kW÷50 kW

Sizes i-290 0240 and 0250 represent the latest evolution in MAXA full inverter heat pump technology. By using the environmentally friendly R290 refrigerant, it is possible to achieve the final evolutionary step that further simplifies the design of systems fully managed by the heat pump alone. In fact, thanks to a maximum temperature of 78°, direct application on systems requiring high supply temperatures is also very straightforward.

### Construction Features

- Proprietary control system with microcontroller-based regulation, superheat control logic via electronic expansion valve.
- Compressors: DC inverter scroll.
- Fans: axial type with brushless DC motor.
- Source heat exchanger: copper tubes and aluminum fins with hydrophilic coating.
- User plate heat exchanger with AISI 304 stainless steel brazed plates, featuring low pressure drop on the water side.
- Refrigerant circuit made of copper tubing, including: 4-way reversing valve, electronic expansion valve, liquid separator, liquid receiver, high-pressure switch, pressure transducers, filter-drier, liquid sight glass with moisture indicator.
- Hydraulic circuit includes: plate heat exchanger, flow switch, safety valve (6 bar) and manual air vent valve.
- On request (optional), additional components such as a tank and circulation pump can be installed on board the unit.
- Electrical circuit equipped with a three-phase relay for overvoltage and undervoltage monitoring plus phase loss/sequence control. It indicates the presence of all three phases in the correct sequence and whether all three line-to-line voltages are within the set limits.
- Electrical circuit equipped with a digital input that can be activated by an external contact to reduce the sound power level by acting on the ventilation. This mode is particularly recommended for nighttime operation.
- Presence of a leak detection sensor that ensures a high level of safety

### Logics and Controls:

- All units can operate in three different modes: heating, cooling, and domestic hot water, with specific programs that maximize performance in all conditions, including optional control via climatic compensation curve.
- The i-290 series units are capable of managing mixing valves, diverting valves and secondary-side circulation pumps; they are also able to control the solar thermal system, any integration with external heat sources, and integration with external Home/Building Automation or Home Automation systems.
- The i-290 0240-0250 series can be fully managed via the onboard unit display.
- The range is compatible with the various MAXA remote control models, in particular: **e-Lite**, suitable for local control of a single heat pump; **Hi-TV415**, suitable for local control of a cascade of heat pumps; **e-Pro**, which enables both local and remote control of a single heat pump; or **CONNECT BOX**, which functions as a gateway between the heat pump and the local Wi-Fi network.

### Operating Areas

Tw: water temperature - Ta: outdoor air temperature

## Accessories

### Factory-installed

- **KA1** - Anti-freeze heater on: heat exchanger and pump - Electric heater installed on the front side of the plate heat exchanger, which is activated when the water temperature inside the exchanger drops below +4°C. If the selected hydronic kit includes the pump, this component will also be equipped with a heater that protects it from ice formation.
- **TR2** - Cu/Al coil with Silver Line surface treatment. Finned coil heat exchangers with copper tubes and aluminium fins, subjected to treatment with a special polyurethane-based paint for corrosion protection. The protection provides the coil with flexibility to withstand thermal contraction and expansion, UV resistance, and makes it dirt-repellent. The treatment ensures coil protection under virtually all environmental conditions: from marine to rural environments, from industrial to urban areas. For specific instructions on cleaning coils treated in this way, refer to the relevant chapter in the user-installer manual. The treatment withstands 6000 h according to ASTM B117.
- **TR2C4** - Anti-corrosion treatment on coil and sheet metal - includes a TR2-type treatment of the coil and, additionally, the hot-dip galvanized steel panels are painted so as to make them suitable for installation of the unit in C4H environments, in accordance with UNI EN 12944. The fastening hardware is suitable for installation in C4H environments.
- **RP** - Coil protection grid. Grids installed to protect finned coils. The grilles are used to protect the heat exchanger from accidental contact. They are especially recommended in locations where people or animals could damage, or be injured by, the finned heat exchanger. They can also be installed after the unit has been delivered.
- **CM** - BMS connectivity setup - ModBus protocol included - accessory that enables the connection of the unit to external controllers via serial cable with RS-485 electrical standard and ModBus RTU protocol.
- **IM** - Circuit breakers on compressors - Overcurrent switches applied to compressors, protecting components from faults caused by possible current spikes.
- **PS** - Fixed-speed AC circulation pump.
- **PSI** - AC circulation pump controlled via external inverter installed in the electrical panel.
- **PSEC** - Single EC pump equipped with integrated frequency converter (high head).
- **PS-SI** - Fixed-speed AC circulation pump with integrated 400-liter tank and 24-liter expansion vessel.
- **PSI-SI** - AC circulation pump controlled via external inverter installed in the electrical panel, with integrated 400-litre tank and 24-litre expansion vessel.
- **PSEC-SI** - Single EC pump equipped with integrated frequency converter (high head), with integrated 400-liter tank and 24-liter expansion vessel.
- **GL** - Packaging with wooden crate. Special packaging consisting of a wooden crate to protect the unit during transport. Optional; it is recommended for long-distance shipments (for example, container transport) or when the unit is stored in a warehouse where it may be subject to accidental damage. The boards that make up the structure comply with ISPM15 regulations.
- **SL** - Silenced Version. Involves the installation of sound-absorbing covers on the compressors, significantly reducing the unit's sound pressure level and ensuring quieter operation without altering performance.
- **SSL** - Super Silent Version. Maintains the features of the SL and incorporates an optimized diffuser that increases fan efficiency. This allows the fan speed to be reduced, lowering sound pressure and optimizing energy consumption, ensuring improved acoustic comfort.
- **EXSL** - Extra Silenced Version. Adds an additional sound-absorbing cover on the tandem compressors to the SL configuration, achieving a further noise reduction for applications that are particularly sensitive to acoustic impact.
- **EXSSL** - Extra Super Silenced version. Includes all SSL solutions and adds additional sound-absorbing cladding on the tandem compressors, for the maximum level of noise reduction available in the range.

### Provided separately

- **SAS** - Domestic hot water probe / Remote system probe - in some system configurations (e.g. heat pump in parallel with the boiler on the same hydronic circuit and diverter valve for boiler exclusion), it may be necessary to enable a system temperature probe so that the unit controller can correctly manage the operation. The remote system probe controls the heat pump temperature only during the compressor start-up phase; shutdown is managed by the probe located on the heat pump flow line.
- **SPS** - Solar panel probe for GI3 - probe required to measure the temperature of the solar panels when the unit is integrated with a solar thermal system.
- **AG** - Anti-vibration kit - designed to prevent transmission of vibrations to the structure; must be installed under the unit, in the dedicated mounting holes.
- **FY** - Y-strainer - contains a stainless steel mesh screen (500 µm filtration) that collects solid materials present in the water. Filtration prevents blockage and/or damage to the devices installed downstream of the strainer. Alternatively, it is possible to install a dirt separator that ensures a filtration level not greater than 1 mm (in this case, it is no longer necessary to

install the Y-strainer).

- **FD-DA** - Air Separator Kit - Use as air separator (installation in the system supply line): component that allows continuous capture and expulsion of air and any other gases dissolved in the water of the hydraulic circuit. The removal efficiency of this device is very high, allowing the elimination of non-condensable gases present in the circuits down to the level of microbubbles. Use as dirt separator (installation in the return pipe, before the inlet to the heat pump): allows blocking and retaining the heavier impurities present in the hydraulic circuit, which are captured by a synthetic filter mesh and collected in a settling chamber. A magnetic device located inside the body of the dirt separator also allows interception of ferromagnetic particles.
- **VDIS4** - Three-way diverting valve for DHW production. Valve that diverts the water flow produced by the heat pump between the system and a buffer tank for the production of domestic hot water. Three-way motorized ball valve, DN (1 1/2), Kvs 28, complete with actuator, insulation shell and spacer, ensuring correct operation even with glycolated water. The power cable from the actuator is 1 metre long.

\*\* Accessories not usable simultaneously

## Accessories

### Provided separately

- **VSA** - Anti-freeze thermal discharge valve – a valve capable of opening at 0°C to prevent ice formation inside the pipes.
- **RP** - Coil protection grilles – wire mesh to prevent foreign objects from entering the coil and to protect the coil from accidental contact with objects or people (supplied as a separate accessory and to be installed by the installer).
- **RV** - Grooved connection joint. Carbon steel stub pipe featuring, on one side, a grooved connection complete with clamp for connection to the heat pump, and on the other side a G 1" 1/2 M threaded connection. The kit consists of 2 stub pipes and 2 grooved clamps.
- **GI3\*\*** - External system management module - enables management of the following functions: recirculation pump control, plant-side mixing valve control, solar thermal integration control.
- **ISK\*\*** - USB/RS485 serial converter – interface device capable of reading and writing control registers via the RS485 standard and converting them to a USB port that can be connected to any supervision system.
- **LNC\*\*** - LAN-Wi-Fi router – device that allows the unit to be connected to a local network via Ethernet cable or Wi-Fi coverage for remote monitoring.
- **OVPN\*\*** - 3G LAN-Wi-Fi router with VPN tunnel – device that

allows the unit to be connected remotely with an industrial router using the secure OPENVPN service.

- **e-LITE\*\*** - Color touch-screen wired controller, which can be used as a remote keypad for the heat pump, as it replicates the functions of the on-board unit display. It is equipped with local temperature sensing and time scheduling.
- **e-Pro\*\*** - Color touch-screen Wi-Fi wired controller that allows both local and remote control via the MyMaxa app.
- **Hi-TV415\*\*** - Color touchscreen wired controller for centralized management of a chiller/heat pump cascade, for up to 7 units.
- **Connect Box\*\*** - Wi-Fi communication gateway for the Maxa Connect App.

## Monobloc R32 air-to-water reversible inverter heat pump

6 kW÷18 kW

### 11 models: the most compact and high-performance on the market!

The use of inverter technology together with DC brushless motors ensures extremely high overall energy efficiency, both by reducing the specific consumption of each motor and thanks to the high modulation capability.

Extensive use of these technologies on all components results in high COP and EER values, with a significant increase in efficiency at partial loads.

### Construction Features

- Proprietary control system with microcontroller-based regulation, superheat control logic via electronic expansion valve.
- Compressors: Twin Rotary DC inverter
- Fans: axial type with brushless DC motor
- Source heat exchanger: optimized with a circuit and a finned coil with copper tubes and aluminum fins with hydrophilic treatment.
- User plate heat exchanger with AISI 304 stainless steel brazed plates, featuring low pressure drop on the water side.
- Refrigerant circuit made of copper tubing, including: condensing control, electronic thermostatic valve, 4-way reversing valve, high-pressure switches, liquid separator and receiver, service and control valves, high- and low-pressure transducers.
- Integrated hydraulic circuit with high-efficiency variable-speed brushless circulator, flow switch, air vent valve, overpressure valve (6 bar), pressure gauge, and system filling and drain cock.
- The KA version provides for the installation of a heating cable on the base of the heat pump at the condenser coil and a PET heater positioned on the plate heat exchanger. The technical and performance data are identical to those of the standard version.
- The SL version, in winter operating mode, features a maximum sound power limited to 53 dB(A), which can be reached under certain conditions.

### Logics and Controls:

- All units can operate in three different modes: heating, cooling, and domestic hot water, with specific programs that maximize performance in all conditions, including optional control via climatic compensation curve.
- The units of the V5 series are capable of managing mixing valves, diverting valves, and secondary-side circulation pumps; they are also able to control the solar thermal system, any integration with external heat sources, and integration with external Home/Building Automation or Home Automation systems. The entire i-32V5 series can be controlled remotely (accessory HI-TV415).
- Standard RS485 Modbus protocol.

### Operating Areas

Tw: water temperature - Ta: outdoor air temperature

## Accessories

### Factory-installed

- **TR2** - Anti-corrosion treatment for coils – thanks to the treatment, the coil becomes flexible to withstand thermal expansion and contraction, mechanically resistant, protected against UV rays and dirt-repellent. Heat transfer losses are very limited. The treatment ensures coil protection in virtually all environmental conditions: from coastal to rural areas, from industrial to urban zones. The treatment withstands 6000 h according to ASTM B117.
- **GI\*** - System management module – enables management of

the following functions: management of the booster pump with the aid of a room thermostat (not supplied); management of the mixing valve on the system side in both heating and cooling modes; management of solar-thermal integration.

- **CM** - BMS connectivity setup – ModBus protocol included – accessory that enables the connection of the unit to external controllers via serial cable with RS-485 electrical standard and ModBus RTU protocol.

### Provided separately

- **SAS** - Domestic hot water probe / Remote system probe – in some system configurations (e.g. heat pump in parallel with the boiler on the same hydronic circuit and diverter valve for boiler exclusion), it may be necessary to enable a system temperature probe so that the unit controller can correctly manage the operation. The remote system probe controls the heat pump temperature only during the compressor start-up phase; shutdown is managed by the probe located on the heat pump flow line.
- **SPS** - Solar panel probe for GI3 – probe required to measure the temperature of the solar panels when the unit is integrated with a solar thermal system.
- **GI3\*\*** - External system management module – enables management of the following functions: recirculation pump control, plant-side mixing valve control, solar thermal integration control.
- **AG** - Anti-vibration kit – designed to prevent transmission of vibrations to the structure; must be installed under the unit, in the dedicated mounting holes.
- **VRC** - Condensate drip tray – galvanized sheet metal container to be installed at the base of the unit for collecting condensate water.
- **FY** - Y-strainer – contains a stainless steel mesh screen (500 µm filtration) that collects solid materials present in the water. Filtration prevents blockage and/or damage to the devices installed downstream of the strainer. Alternatively, it is possible to install a dirt separator that ensures a filtration level not greater than 1 mm (in this case, it is no longer necessary to install the Y-strainer).
- **FD** - Dirt separator – allows the heavier impurities present in the hydraulic circuit to be stopped and retained, as they are captured by a synthetic filter mesh and collected in a settling chamber. A magnetic device located inside the body of the dirt separator also makes it possible to trap ferromagnetic particles.
- **VDIS2** - Diverting valve – 3-way motorized ball valve DN (1"1/4) Kvs 19.2, 1" 1/2 MMM connections, complete with actuator.

- **ACT** - Technical storage tank (see dedicated section).
- **VSA** - Anti-freeze thermal discharge valve – a valve capable of opening at 0°C to prevent ice formation inside the pipes.
- **ISK\*\*** - USB/RS485 serial converter – interface device capable of reading and writing control registers via the RS485 standard and converting them to a USB port that can be connected to any supervision system.
- **LNC\*\*** - LAN-Wi-Fi router – device that allows the unit to be connected to a local network via Ethernet cable or Wi-Fi coverage for remote monitoring.
- **OVPN\*\*** - 3G LAN-Wi-Fi router with VPN tunnel – device that allows the unit to be connected remotely with an industrial router using the secure OPENVPN service.
- **i-CR2\*\*** - Wall-mounted remote control – Modbus remote controller with negative LCD and capacitive keys. The device is intended to be used as a remote unit keypad with local temperature sensing and replicates the functions of the on-board unit controller.
- **e-LITE\*\*** - Color touch-screen wired controller, which can be used as a remote keypad for the heat pump, as it replicates the functions of the on-board unit display. It is equipped with local temperature sensing and time scheduling.
- **e-Pro\*\*** - Color touch-screen Wi-Fi wired controller that allows both local and remote control via the MyMaxa app.
- **Hi-TV415\*\*** - Color touchscreen wired remote controller for centralized management of a chiller/heat pump cascade, for up to 7 units.
- **Connect Box\*\*** - Wi-Fi communication gateway for the Maxa Connect App.

\* Factory-mounted accessory available only for sizes 10-12-14-16

\*\* Accessories not usable simultaneously

### Versions

- i-32V5/KA - Reversible heat pump with kit
- i-32V5SL - Silenced reversible heat pump
- i-32V5SL/KA - Soundproofed reversible heat pump with integrated antifreeze kit

**e-PRO**

Wi-Fi multifunction remote controller  
**ACCESSORY**

**e-LITE**

Multifunction remote controller  
**ACCESSORY**

**Hi-TV415**

Touch screen remote controller for cascade management (max 7 units)

(1) Cooling: outdoor air temperature 35°C; inlet/outlet water temperature 12/7°C.

(2) Cooling: outdoor air temperature 35°C; inlet/outlet water temperature 23/18°C.

(3) Heating: outdoor air temperature 7°C d.b. 6°C w.b.; water inlet/outlet temp. 30/35°C

(4) Heating: outdoor air temperature 7°C d.b. 6°C w.b.; water inlet/outlet temp. 40/45°C.

(5) Cooling: low temperature, variable output, constant flow rate.

(6) Heating: average climatic conditions; Tbiv = -7°C; low temperature, variable output, constant flow rate.

(7) Indicative data subject to change. For the correct data, always refer to the technical nameplate on the unit.

(8) Calculated for a reduction in system water temperature of 20°C with a defrost cycle lasting 6 minutes.

(9) Sound power: heating mode condition (3) according to EN 12102-1:2013; value determined on the basis of measurements carried out in accordance with standard UNI EN ISO 9614-1.

(10) Sound power: heating mode at partial load according to Annex A of EN 12102:2017; value determined on the basis of measurements carried out in accordance with UNI EN ISO 9614-1, in compliance with the requirements of the Eurovent and Heat Pump Keymark certifications.

The reported performance data are indicative and may be subject to change. Furthermore, the capacities declared at points (1), (2), (3) and (4) shall be understood as referring to the instantaneous power in accordance with UNI EN 14511. The data declared at points (5) and (6) are determined in accordance with UNI EN 14825.

# i-32V5C Midi

## Air-cooled inverter monobloc R32 water chiller

21 kW÷32 kW

The chillers of the i-32V5C Midi range have been designed for residential and commercial applications.

The use of brushless inverter compressor technology, combined with the electronic expansion valve, the variable-speed circulator and fan, optimizes energy consumption and the operating efficiency of the refrigeration components.

**DC inverter** twin-rotary hermetic compressor, specifically designed for operation with R32, equipped with thermal protection and mounted on rubber anti-vibration supports.

**Casing:** structure made of hot-dip galvanized steel sheet profiles and panels, polyester powder coated, RAL 7035 textured finish, weather-resistant.

**User Side Heat Exchanger:** brazed plate heat exchanger in AISI 304 stainless steel, coated with black flexible closed-cell elastomeric foam.

**Source Side Heat Exchanger:** the air heat exchangers are made entirely of aluminum using microchannel technology.

**Fans:** axial type with brushless DC motor, with airfoil-profile blades. They are statically and dynamically balanced.

### Refrigeration Circuit:

- Filter drier;
- Shut-off valve on the liquid line;
- Liquid flow and moisture indicator;
- Electronic expansion valve
- Charge connections;

- High-pressure safety pressure switches
- High and low pressure transducers

### Standard Components

- Electronic circulator
- EEV - electronic thermostatic valve
- Liquid indicator
- Water-side safety valve
- Drain valve
- Flow switch (flow presence signaling)
- Clean remote on/off contact
- Dynamic setpoint
- Three-phase relay for phase sequence/failure monitoring
- Fan speed controller (ECM fans)
- 2nd setpoint

**Electrical Panel and Control:** fully manufactured and wired in compliance with IEC 60335-2-40.

## Operating Areas

Tw: water temperature - Ta: outdoor air temperature

## Accessories

### Factory-installed

- **KA1** - Anti-freeze heater on: heat exchanger and pump - Electric heater installed on the front side of the plate heat exchanger, which is activated when the water temperature inside the exchanger drops below +4°C. If the selected hydronic kit includes the pump, this component will also be equipped with a heater that protects it from ice formation.
- **TR1** - Microchannel coil with Aero surface treatment. The treatment consists in the application by spraying of a special water-based coating made of new resins with very high chemical resistance. The product is flexible to withstand thermal contractions and expansions, UV-resistant, dirt-repellent, mechanically resistant, with very limited heat transfer losses and practically no effects on air-side pressure drops. The treatment withstands 6000 h according to ASTM B117.
- **TR1C4** - Anti-corrosion treatment on coil and sheet metal - includes a TRI-type treatment on the coil and, in addition, the hot-dip galvanized steel panels are painted so as to make them suitable for unit installation in C4H environments, according to UNI EN 12944. The external fastening hardware is made of AISI 304 material, class A2.
- **GI** - System management module - allows the management of the following functions: management of the booster circulation

pump with the aid of a room thermostat (not supplied); management of the mixing valve on the system side in both heating and cooling modes; management of solar-thermal integration.

- **CM** - BMS connectivity setup - ModBus protocol included - accessory that enables the connection of the unit to external controllers via serial cable with RS-485 electrical standard and ModBus RTU protocol.
- **RP** - Coil protective grilles - wire mesh to prevent foreign objects from entering the coil and to protect the coil from accidental contact with objects or people.
- **IM** - Circuit breakers on compressors - Overcurrent switches applied to compressors, protecting components from faults caused by possible current spikes.
- **DS** - The unit with desuperheater includes the addition of a brazed-plate heat exchanger made of AISI 316 stainless steel, factory-insulated, a variable-speed circulator, and a remote temperature sensor. The desuperheater allows partial recovery of the condensation heat.
- **SL** - thanks to the use of dedicated acoustic panels, it ensures low sound emissions.

### Provided separately

- **AG** - Anti-vibration kit - designed to prevent transmission of vibrations to the structure; must be installed under the unit, in the dedicated mounting holes.
- **VRC** - Condensate drip tray - galvanized sheet metal container to be installed at the base of the unit for collecting condensate water.
- **FY** - Y-strainer - contains a stainless steel mesh screen (500 µm filtration) that collects solid materials present in the water. Filtration prevents blockage and/or damage to the devices installed downstream of the strainer. Alternatively, it is possible to install a dirt separator that ensures a filtration level not greater than 1 mm (in this case, it is no longer necessary to install the Y-strainer).
- **FD** - Dirt separator - allows the heavier impurities present in the hydraulic circuit to be stopped and retained, as they are captured by a synthetic filter mesh and collected in a settling chamber. A magnetic device located inside the body of the dirt separator also makes it possible to trap ferromagnetic particles.
- **VDIS3** - Diverter valve - 3-way motorized ball valve Kvs 20.8, F 1" 1/4 connections, complete with actuator.
- **ACT** - Technical storage tank (see dedicated section).
- **VSA** - Anti-freeze thermal discharge valve - a valve capable of opening at 0°C to prevent ice formation inside the pipes.
- **ISK\*\*** - USB/RS485 serial converter - interface device capable of reading and writing control registers via the RS485 standard and converting them to a USB port that can be connected to any supervision system.
- **LNC\*\*** - LAN-Wi-Fi router - device that allows the unit to

be connected to a local network via Ethernet cable or Wi-Fi coverage for remote monitoring.

- **OVPN\*\*** - 3G LAN-Wi-Fi router with VPN tunnel - device that allows the unit to be connected remotely with an industrial router using the secure OPENVPN service.
- **i-CR2\*\*** - Wall-mounted remote control - Modbus remote controller with negative LCD and capacitive keys. The device is intended to be used as a remote unit keypad with local temperature sensing and replicates the functions of the on-board unit controller.
- **e-LITE\*\*** - Color touch-screen wired controller, which can be used as a remote keypad for the heat pump, as it replicates the functions of the on-board unit display. It is equipped with local temperature sensing and time scheduling.
- **Hi-TV415\*\*** - Color touchscreen wired remote controller for centralized management of a chiller/heat pump cascade, for up to 7 units.
- **Connect Box\*\*** - Wi-Fi communication gateway for the Maxa Connect App.

\*\* Accessories not usable simultaneously

### Versions

- i-32V5C Midi - Chiller standard version
- i-32V5C-BT Midi - The BT version of the unit allows the operating range of the water temperature to be extended

down to -8°C. In this case it is necessary to use a mixture of water and glycol.

# i-32V5H Midi

## Reversible air-to-water inverter monobloc heat pumps with R32

21 kW÷32 kW

The heat pumps in the i-32V5H Midi range have been designed for residential and commercial applications; they are extremely versatile and suitable for operation in heat pump mode with hot water production for space heating and domestic hot water use at a temperature of 60°C. The use of brushless inverter compressor technology, combined with the electronic expansion valve, the variable-speed circulator and fan, optimizes energy consumption and the operating efficiency of the refrigeration components.

**DC inverter** twin-rotary hermetic compressor, specifically designed for operation with R32, equipped with thermal protection and mounted on rubber anti-vibration supports.

**Cabinet:** Suitable outdoor installation structure made of thick hot-dip galvanized steel sheet profiles, polyester powder coated, RAL 7035 textured finish, weather resistant.

**User Side Heat Exchanger:** brazed-plate heat exchanger in AISI 304 stainless steel, insulated with black flexible closed-cell elastomeric foam.

**Source Side Heat Exchanger:** the air exchangers are made of copper tubes and aluminum fins.

**Electrical Panel and Control:** fully manufactured and wired in compliance with IEC 60335-2-40.

**Fans:** axial type with airfoil blades. They are statically and dynamically balanced and supplied complete with protection grille and inlet/outlet air nozzle with double flared profile, specially shaped to increase efficiency and reduce noise. The electric motor used is modulated with a directly coupled EC brushless motor and equipped with integrated thermal protection.

The motor has an IP 54 protection rating according to CEI EN 60529.

### Standard Components

- Electronic circulator
- EEV – electronic thermostatic valve
- Liquid indicator
- Water-side safety valve
- Drain valve
- Flow switch (flow presence signaling)
- Clean remote on/off contact
- Dynamic setpoint
- Three-phase relay for phase sequence/failure monitoring
- Fan speed controller (ECM fans)
- 2nd setpoint

## Operating Areas

Tw: water temperature - Ta: outdoor air temperature

## Accessories

### Factory-installed

- **KA** - Antifreeze kit (heat exchanger + base) – includes the use of a self-heating cable that is glued to the base of the unit near the condenser coil, and a PET heater positioned on the plate heat exchanger face.
- **TR2** - Anti-corrosion treatment for coils – thanks to the treatment, the coil becomes flexible to withstand thermal expansion and contraction, mechanically resistant, protected against UV rays and dirt-repellent. Heat transfer losses are very limited. The treatment ensures coil protection in virtually all environmental conditions: from coastal to rural areas, from industrial to urban zones. The treatment withstands 6000 h according to ASTM B117.
- **TR2C4** - Anti-corrosion treatment on coil and sheet metal – includes a TR2-type treatment on the coil and, in addition, the hot-dip galvanized steel panels are painted so as to make them suitable for unit installation in C4H environments, in accordance with UNI EN 12944. The external fastening hardware is made of AISI 304 material, class A2. The treatment also includes the fan protection grille, while the galvanized sheets inside the unit (electrical panel casing and inductances) are excluded.
- **GI** - System management module - allows the management of the following functions: management of the booster circulation

pump with the aid of a room thermostat (not supplied); management of the mixing valve on the system side in both heating and cooling modes; management of solar-thermal integration.

- **CM** - BMS connectivity setup – ModBus protocol included – accessory that enables the connection of the unit to external controllers via serial cable with RS-485 electrical standard and ModBus RTU protocol.
- **RP** - Coil protective grilles – wire mesh to prevent foreign objects from entering the coil and to protect the coil from accidental contact with objects or people.
- **IM** - Circuit breakers on compressors - Overcurrent switches applied to compressors, protecting components from faults caused by possible current spikes.
- **DS** - The unit with desuperheater includes the addition of a brazed-plate heat exchanger made of AISI 316 stainless steel, factory-insulated, a variable-speed circulator, and a remote temperature sensor. The desuperheater allows partial recovery of the condensation heat.
- **SL** - thanks to the use of dedicated acoustic panels, it ensures low sound emissions.

### Provided separately

- **SAS** - Domestic hot water probe / Remote system probe – in some system configurations (e.g. heat pump in parallel with the boiler on the same hydronic circuit and diverter valve for boiler exclusion), it may be necessary to enable a system temperature probe so that the unit controller can correctly manage the operation. The remote system probe controls the heat pump temperature only during the compressor start-up phase; shutdown is managed by the probe located on the heat pump flow line.
- **SPS** - Solar panel probe for GI3 – probe required to measure the temperature of the solar panels when the unit is integrated with a solar thermal system.
- **AG** - Anti-vibration kit – designed to prevent transmission of vibrations to the structure; must be installed under the unit, in the dedicated mounting holes.
- **VRC** - Condensate drip tray – galvanized sheet metal container to be installed at the base of the unit for collecting condensate water.
- **FY** - Y-strainer – contains a stainless steel mesh screen (500 µm filtration) that collects solid materials present in the water. Filtration prevents blockage and/or damage to the devices installed downstream of the strainer. Alternatively, it is possible to install a dirt separator that ensures a filtration level not greater than 1 mm (in this case, it is no longer necessary to install the Y-strainer).
- **FD** - Dirt separator – allows the heavier impurities present in the hydraulic circuit to be stopped and retained, as they are captured by a synthetic filter mesh and collected in a settling chamber. A magnetic device located inside the body of the dirt separator also makes it possible to trap ferromagnetic particles.
- **VDIS3** - Diverter valve - 3-way motorized ball valve Kvs 20.8, 1" 1/4 connections, complete with actuator.
- **ACT** - Technical storage tank (see dedicated section).
- **VSA** - Anti-freeze thermal discharge valve – a valve capable of

opening at 0°C to prevent ice formation inside the pipes.

- **ISK\*\*** - USB/RS485 serial converter – interface device capable of reading and writing control registers via the RS485 standard and converting them to a USB port that can be connected to any supervision system.
- **LNC\*\*** - LAN-Wi-Fi router – device that allows the unit to be connected to a local network via Ethernet cable or Wi-Fi coverage for remote monitoring.
- **OVPN\*\*** - 3G LAN-Wi-Fi router with VPN tunnel – device that allows the unit to be connected remotely with an industrial router using the secure OPENVPN service.
- **i-CR2\*\*** - Wall-mounted remote control – Modbus remote controller with negative LCD and capacitive keys. The device is intended to be used as a remote unit keypad with local temperature sensing and replicates the functions of the on-board unit controller.
- **e-LITE\*\*** - Color touch-screen wired controller, which can be used as a remote keypad for the heat pump, as it replicates the functions of the on-board unit display. It is equipped with local temperature sensing and time scheduling.
- **e-Pro\*\*** - Color touch-screen Wi-Fi wired controller that allows both local and remote control via the MyMaxa app.
- **Hi-TV415\*\*** - Color touchscreen wired remote controller for centralized management of a chiller/heat pump cascade, for up to 7 units.
- **Connect Box\*\*** - Wi-Fi communication gateway for the Maxa Connect App.

\*\* Accessories not usable simultaneously

# ACT

## Buffer tank for hot water and chilled water

50-75-95 L

The technical storage tank called ACT consists of a horizontally mounted cylindrical vessel, available in three different capacities.

The tank is thermally insulated so that it can operate with both hot and cold water and is equipped with hydraulic connections arranged to promote a uniform flow throughout the entire tank.

The ACT storage tank is closed with a supporting frame and powder-coated metal sheet panels in the same color as the units of the i-32V5 series. The supply includes both the fixing screws between the heat pump and the ACT frame and the adjustable feet for leveling the assembly. Several accessories are available, such as various sizes of electric heaters complete with their own electrical panel and the expansion vessel.

ACT is suitable for supporting the i-32V5 series.

Electric heating element (optional)

Insulating panel

### Construction Features

- Inertial buffer tank with a capacity of 50, 75 and 95 litres.
- Compact dimensions and single structure for all storage tank sizes.
- Anti-vibration mounts between inertia base and heat pump (standard supply)
- No. 1 flexible-extendable fitting for connecting the buffer tank to the heat pump (standard supply)
- Height-adjustable feet (standard)
- Anti-corrosion painting of the storage tank.
- Insulation in EDILFIBER, a newly designed thermal insulator consisting of polyester fiber panels, predominantly produced from recycled municipal separated waste collection (PET bottle collection), and therefore environmentally friendly.
- Polyurethane powder-coated sheet metal.

- Water filling/draining valve.
- 18-litre expansion vessel (optional, factory-installed).
- Electric heaters rated 1.2 kW (single-phase), 2, 3 and 4.5 kW, available in both single-phase and three-phase versions, managed in integration and/or replacement mode, with dual safety level consisting of an automatic reset thermostat and a manual reset thermostat to protect both the system and the user (optional, factory-installed).

### Accessories

#### Factory-installed

- **RE1.2M:** Single-phase 1.2 kW electric heater
- **RE2.0M:** Single-phase 2 kW electric heater
- **RE3.0M:** Single-phase 3 kW electric heater

## Buffer tank for hot water and chilled water

120-220 L

The technical storage tank named ACT consists of a horizontally positioned cylindrical tank, available in different capacities. The tank is thermally insulated with expanded polyurethane foam, so that it can operate with both hot and cold water.

ACT offers the option of installing hydraulic connections positioned to promote a uniform flow inside the tank, allowing it to be used both as an in-line buffer tank and as a hydraulic separator. The ACT storage unit constitutes a supporting structure and is completed with RAL 7043 coloured panels. ACT includes both the fastening hardware between the heat pump and the frame, and the adjustable feet for leveling the assembly.

**ACT is suitable for supporting various heat pump models: the i-290 series from 0106 to 0127, i-32V5, i-32V5 Midi.**

Some accessories are available, such as: various sizes of electric heaters equipped with their own electrical panel, expansion vessels, and the antifreeze valve.

### Construction Features

- Inertial buffer tank with a capacity of 120 and 220 litres.
- Compact dimensions with two different configurations and sizes.
- Compact dimensions with two different configurations and sizes.
- Sturdy frame suitable for supporting various heat pump models: the i-290 series from 0106 to 0127, i-32V5, i-32V5 Midi.
- Anti-vibration mounts between ACT and heat pump (standard)
- Connection fittings between ACT and heat pump (optional, supplied separately)
- Height-adjustable feet (standard)

- Anti-corrosion finish of the storage tank
- Expanded polyurethane foam insulation
- Water filling/drain valve (standard supply)
- Air vent (supplied separately)
- Multiple expansion vessel models (optional, supplied separately)
- 5 models of supplementary electric heaters, both single-phase and three-phase (optional, supplied separately)
- Anti-freeze kit, thermal anti-freeze drain valve, suitable for protecting systems without glycol inside the piping (optional, supplied separately)

### Accessories

- **RE1.0M:** Single-phase electric heater 1.0 kW
- **RE2.0M:** Single-phase 2 kW electric heater
- **RE3.0M:** Single-phase 3 kW electric heater
- **RE4.0M:** Single-phase electric heater 4.0 kW
- **RE3.0T:** 3 kW three-phase electric heater
- **RE5.0T:** Three-phase electric heater 5.0 kW
- **ANTIFREEZE KIT:** Antifreeze protection. Protects the unit and the system against possible damage caused by an unexpected drop in the operating temperature of the process water close to freezing point, by draining the system.
- **VE7AT:** 7 l expansion vessel (ACT 90, 120)

- **VE12AT:** 12 l expansion vessel (ACT 170)
- **VE15AT:** 15 l expansion vessel (ACT 220)
- **KF1:** Mounting Kit i-32V5 (06A ~ 18T A)
- **KF2:** i-290 Fastening Kit (0106 ~ 0118)
- **KF3:** i-32V5 Midi mounting kit (0121 ~ 0132), i-290 (0121 ~ 0127)
- Hydraulic kit consisting of double insulated copper pipe with tailpiece, plus shut-off valve with insulating shell (supplied separately)
- Air vent (supplied separately)

Electric heaters cannot be installed when combined with i-290 range heat pumps.

## Reversible air-to-water inverter heat pumps with axial fan, R32 refrigerant

40 kW÷70 kW

**Compressors:** DC inverter models are hermetic scroll type, specifically designed to operate with R32 refrigerant gas.

**Carpentry:** suitable structure for outdoor installation made of thick profiles in hot-dip galvanized steel sheet, polyester powder-coated, RAL 7035 textured finish.

**User Side Heat Exchanger:** brazed plate heat exchanger in AISI 304 stainless steel, coated with black flexible closed-cell elastomeric foam.

**Source Side Heat Exchanger:** the air heat exchangers are made of copper tubes and aluminum fins. The tubes are mechanically expanded into the aluminum fins to increase the heat transfer coefficient.

**Fan:** the fan is of the axial type with airfoil-profile blades. The electric motor used is controlled with modulation.

**Refrigerant Circuit:** is made of copper piping, brazed and factory-assembled in accordance with EN 13134.

Includes: drier filter; shut-off valve on the liquid line; liquid and humidity sight glass; electronic expansion valve; charging ports; high-pressure safety pressure switch; high and low pressure transducers; cycle reversing valve; receiver and liquid separator; non-return valves; fan silent mode. Digital input that can be activated by an external contact, allowing the sound power level to be reduced by acting on the ventilation.

**Electrical Panel and Control:** fully manufactured and wired in compliance with IEC 60335-2-40. Includes:

- Main isolator with door interlock;
- Isolation transformer for control power supply
- Thermal protection fuses for compressor drivers, EC fan, and pump

inverter (where present);

- Automatic circuit breaker for compressor protection (optional);
- Driver for modulating compressor control;
- Phase sequence control relay
- Phase sequence control relay with minimum/maximum voltage trip setting (optional)
- Thermostatically controlled ventilation inside the electrical panel.
- Interface terminal with alphanumeric display;
- Display function for set values, analog inputs, fault codes, alarm history, and parameter index;
- On/off button and alarm reset;
- Provision for Modbus connectivity (CM accessory).
- Three-phase relay for over- and undervoltage monitoring + phase loss/sequence.

## Operating Areas

Tw: water temperature - Ta: outdoor air temperature

### Factory-installed

- **KA1** - Antifreeze protection on: heat exchanger and pump. Electric heating element located on the front side of the plate heat exchanger, which is activated when the water temperature inside the exchanger drops below +4°C.
- **KA2** - Antifreeze heater on: heat exchanger, pump and tank - includes KA1. In addition to accessory KA1, an immersion heater is added in the tank. The kit consists of: an AISI 321 sheathed electric heater, a parameterizable digital temperature controller, and a contactor.
- **TR2\*\*\*** - Anti-corrosion coil treatment - thanks to the treatment, the coil becomes flexible to withstand thermal contraction and expansion, mechanically resistant, protected against UV rays, and dirt-repellent.
- **TR2C4\*\*\*** - Anti-corrosion treatment on coil and sheet metal - includes a TR2-type treatment on the coil and, in addition, the hot-dip galvanized steel panels are painted to make them suitable for unit installations in C4H environments, in accordance with UNI EN 12944. The external fastening hardware is made of AISI304, class A2. The treatment also includes the fan protection grille.
- **RP** - Coil protection grilles - wire mesh to prevent foreign objects from entering the coil and to protect the coil from accidental contact with objects or people (they can also be requested as a separate accessory).
- **C \*** - Ductable version. With the ductable version, the same diffuser used in the SSL version is employed to obtain a higher fan head, allowing the ducting of the air discharge. The figure shows an example of a possible ducted installation.
- **C(S) \*** - Ductable version with cowls. In addition to the ductable version, thermo-acoustic cowls are installed on the compressors.
- **SL \*** - Silent version. The silent unit (equipped with SL accessory) features an innovative thermo-acoustic jacket on the compressors. This insulation allows a noise reduction of up to 10% at certain compressor rotation frequencies.
- **SSL \*** - Super silenced version. The super silenced unit (equipped with the SSL accessory) includes, in addition to the thermo-acoustic jacket on the compressors, a special fan with diffuser. This component increases fan efficiency, allowing speed reduction and consequently lowering sound pressure levels and energy consumption. In this way, significant amounts of electrical energy can be saved for each fan.
- **DS** - The unit with desuperheater includes the addition of a brazed-plate heat exchanger made of AISI 316 stainless steel, factory-insulated, a variable-speed circulator, and a remote temperature sensor. The desuperheater allows partial recovery of the condensation heat.

- **BT** - The BT accessory allows the operating range of the water temperature to be extended down to -8°C. In this case, it is necessary to use a mixture of water and glycol.
- **IM** - Circuit breakers on compressors - Overcurrent switches applied to compressors, protecting components from faults caused by possible current spikes.
- **GI** - System management module - allows the management of the following functions: management of the booster circulation pump with the aid of a room thermostat (not supplied); management of the mixing valve on the system side in both heating and cooling modes; management of solar-thermal integration.
- **CM** - BMS connectivity setup - ModBus protocol included - accessory that enables the connection of the unit to external controllers via serial cable with RS-485 electrical standard and ModBus RTU protocol.
- **RFM** - Discharge and suction shut-off valve for compressors Shut-off valve installed on the compressor suction and discharge lines; it simplifies maintenance by avoiding the need to recover the refrigerant from the entire unit during servicing.
- **TE2** - Special mechanical seal for pump with glycol content above 25% and below 50% For water-glycol mixtures with a glycol weight percentage above 25% and up to 50%, a different mechanical seal is used to ensure correct operation of the pump.
- **PS\*\***: Fixed-speed AC circulation pump
- **PSI\*\***: AC circulation pump controlled via external inverter installed in the electrical panel
- **PSEC\*\***: Single EC pump equipped with integrated frequency converter (high head)
- **PS-SI\*\***: Fixed-speed AC circulation pump with integrated 400-litre tank and 24-litre expansion vessel
- **PSI-SI\*\***: AC circulation pump controlled via an external inverter installed in the electrical panel, with integrated 400-liter tank and 24-liter expansion vessel
- **PSEC-SI\*\***: Single EC pump equipped with integrated frequency converter (high head), with integrated 400-litre tank and 24-litre expansion vessel
- **GL** - Packaging with wooden crate. Special packaging consisting of a wooden crate to protect the unit during transport. Optional; it is recommended for long-distance shipments (for example, container transport) or when the unit is stored in a warehouse where it may be subject to accidental damage. The boards that make up the structure comply with ISPM15 regulations.

\* Accessories that cannot be used simultaneously

\*\* Accessories not usable simultaneously

\*\*\* Accessories not usable simultaneously

## Accessories

### Provided separately

- **SAS** - Domestic hot water probe / Remote system probe – in some system configurations (e.g. heat pump in parallel with the boiler on the same hydronic circuit and diverter valve for boiler exclusion), it may be necessary to enable a system temperature probe so that the unit controller can correctly manage the operation. The remote system probe controls the heat pump temperature only during the compressor start-up phase; shutdown is managed by the probe located on the heat pump flow line.
- **AG** - Anti-vibration kit – designed to prevent transmission of vibrations to the structure; must be installed under the unit, in the dedicated mounting holes.
- **FY** - Y-strainer – contains a stainless steel mesh screen (500 µm filtration) that collects solid materials present in the water. Filtration prevents blockage and/or damage to the devices installed downstream of the strainer. Alternatively, it is possible to install a dirt separator that ensures a filtration level not greater than 1 mm (in this case, it is no longer necessary to install the Y-strainer).
- **FD-DA** - Air Separator Kit - Use as air separator (installation in the system supply line): component that allows continuous capture and expulsion of air and any other gases dissolved in the water of the hydraulic circuit. The removal efficiency of this device is very high, allowing the elimination of non-condensable gases present in the circuits down to the level of microbubbles. Use as dirt separator (installation in the return pipe, before the inlet to the heat pump): allows blocking and retaining the heavier impurities present in the hydraulic circuit, which are captured by a synthetic filter mesh and collected in a settling chamber. A magnetic device located inside the body of the dirt separator also allows interception of ferromagnetic particles.
- **VDIS4** - Three-way diverting valve for DHW production. Valve that diverts the water flow produced by the heat pump between the system and a buffer tank for the production of domestic hot water. Three-way motorized ball valve, DN (1"1/2), Kvs 28, complete with actuator, insulation shell and spacer, ensuring correct operation even with glycolated water. The power cable from the actuator is 1 metre long.
- **RV** - Grooved connection joint. To facilitate installation to the system, a short length of carbon steel pipe can be supplied which has, on one side, a grooved connection compatible with the one on the unit and equipped with the appropriate clamp for making the connection, and on the other side a G 1" 1/2 M threaded connection. The kit consists of 2 pipe sections and 2 grooved connections for connecting the pipe sections to the

unit.

- **ISK\*\*** - USB/RS485 serial converter – interface device capable of reading and writing control registers via the RS485 standard and converting them to a USB port that can be connected to any supervision system.
- **LNC\*\*** - LAN-Wi-Fi router – device that allows the unit to be connected to a local network via Ethernet cable or Wi-Fi coverage for remote monitoring.
- **OVPN\*\*** - 3G LAN-Wi-Fi router with VPN tunnel – device that allows the unit to be connected remotely with an industrial router using the secure OPENVPN service.
- **i-CR2\*\*** - Wall-mounted remote control – Modbus remote controller with negative LCD and capacitive keys. The device is intended to be used as a remote unit keypad with local temperature sensing and replicates the functions of the on-board unit controller.
- **e-LITE\*\*** - Color touch-screen wired controller, which can be used as a remote keypad for the heat pump, as it replicates the functions of the on-board unit display. It is equipped with local temperature sensing and time scheduling.
- **Hi-TV415\*\*** - Color touchscreen wired controller for centralized management of a chiller/heat pump cascade, for up to 7 units.
- **Connect Box\*\*** - Wi-Fi communication gateway for the Maxa Connect App.
- **e-Pro\*\*** - Color touch-screen Wi-Fi wired controller that allows both local and remote control via the MyMaxa app.
- **VSA** - Anti-freeze drain valve. Accessory that protects the unit in case of low outdoor air temperatures.

(1) Cooling: outdoor air temperature 35 °C; inlet/outlet water temperature 12/7 °C.

(2) Cooling: outdoor air temperature 35 °C; inlet/outlet water temperature 23/18 °C.

(3) Heating: outdoor air temperature 7 °C d.b. 6 °C w.b.; inlet/outlet water temperature 30/35 °C.

(4) Heating: outdoor air temperature 7 °C d.b. 6 °C w.b.; inlet/outlet water temperature 40/45 °C.

(5) Cooling: water inlet/outlet temperature 7/12°C.

(6) Heating: average climatic conditions; Tbiv = -7 °C; low temperature, variable output, constant flow rate.

(7) Indicative data subject to change. For the correct data, always refer to the technical nameplate on the unit.

(8) The indicated volume refers to the total required; the designer must ensure this requirement is met by taking into account the amount already present inside the unit, depending on the selected hydronic kit (please check this value in the technical data sheet).

(9) Sound power: heating mode condition (3) according to EN 12102-1:2013; value determined on the basis of measurements carried out in accordance with standard UNI EN ISO 9614-1.

(10) Heating: outdoor air temperature 7 °C d.b., 6 °C w.b.; inlet/outlet water temperature 47/55 °C.

(11) Sound power: heating mode at partial load in accordance with Annex A of EN 12102:2017; value determined on the basis of measurements carried out in accordance with UNI EN ISO 9614-1, in compliance with the requirements of the Eurovent and Heat Pump Keymark certifications.

(\*\*) for PS/PSI pump kit

N.B. The performance data shown are indicative and may be subject to change. Furthermore, the capacities stated at points (1), (2), (3) and (4) are to be understood as referring to the instantaneous power according to UNI EN 14511. The data stated at points (5) and (6) are determined in accordance with UNI EN 14825.

## Air-to-water reversible inverter heat pumps with axial fan, R410A

66 kW ÷ 115 kW

**Carpentry:** made of hot-dip galvanized and painted sheet metal.

**Compressors:** scroll type, mounted on rubber anti-vibration mounts. Each of the 2 circuits is equipped with a DC inverter compressor. In this way, in each circuit it is possible to modulate continuously between the minimum capacity of the inverter compressor alone and the sum of the maximum capacities of all the compressors in the circuit.

**User-side heat exchanger:** the user-side exchanger is a double-circuit, brazed plate type and is made of AISI 304 stainless steel.

**Air Side Heat Exchanger:** the air side heat exchanger is made of copper tubes and aluminum fins.

**Fan:** the fan is made of fiber-reinforced plastic, is of the axial type with airfoil-profile blades. The electric motor used is controlled via inverter.

**Refrigerant Circuit:** The refrigerant circuits are built using components from leading international manufacturers and in accordance with UNI EN 13134, relating to brazing processes. The refrigerant gas used is R410A. Each refrigerant circuit includes in its basic version: 4-way reversing valve, electronic expansion valve, liquid separator, liquid receivers, auxiliary circuit to reduce defrost times, oil recovery circuit, non-return valves, inspection valves for maintenance and control, safety device in accordance with PED (high-pressure switch), pressure transducers, precision probes, high-capacity dehydrating filter, mechanical filters.

**Electrical Panel:** the electrical panel is manufactured in compliance with current European standards and contains all the electromechanical and electronic components for regulation and control. The electrical panel is equipped with a terminal block with volt-free contacts for remote ON-OFF, summer/winter changeover, domestic hot water sensor, and remote control panel. The addition of the optional GI module allows management of additional system functions.

**Hydraulic Circuit.** Includes: plate heat exchanger with double refrigeration circuit and single hydraulic circuit, inlet pressure gauge and outlet connection on the heat exchanger for the evaluation of pressure drops, service valve, protection flow switch, automatic air vent valve and safety valve (6 bar).

## Operating Areas

Hot - Cold

Tw: water temperature - Ta: outdoor air temperature

1. Heat pump mode
2. Chiller mode
3. Part load capacity

DHW

## Accessories

### Factory-installed

- **CI6:** Inverter AC pump (GI module included)
- **CI7:** Integrated AC pump
- **KA** - Antifreeze kit (heat exchanger + base) – includes the use of a self-heating cable that is glued to the base of the unit near the condenser coil, and a PET heater positioned on the plate heat exchanger face.
- **TR2** - Anti-corrosion treatment for coils – thanks to the treatment, the coil becomes flexible to withstand thermal expansion and contraction, mechanically resistant, protected against UV rays and dirt-repellent. Heat transfer losses are very limited. The treatment ensures coil protection in virtually all environmental conditions: from coastal to rural areas, from industrial to urban zones. The treatment withstands 6000 h according to ASTM B117.
- **GI** - System management module - allows the management of the following functions: management of the booster circulation pump with the aid of a room thermostat (not supplied);

management of the mixing valve on the system side in both heating and cooling modes; management of solar-thermal integration.

- **CM** - BMS connectivity setup – ModBus protocol included – accessory that enables the connection of the unit to external controllers via serial cable with RS-485 electrical standard and ModBus RTU protocol.
- **SL:** Muting
- **SSL:** Super Silencing
- **IM** - Circuit breakers on compressors - Overcurrent switches applied to compressors, protecting components from faults caused by possible current spikes.
- **DSFR** - Three-phase relay for overvoltage and undervoltage monitoring + phase loss/sequence. Indicates the presence of all three phases in the correct sequence and whether all three phase-to-phase voltages are within the set limits. The overvoltage and undervoltage thresholds can be set separately.

### Provided separately

- **SAS** - Domestic hot water probe / Remote system probe – in some system configurations (e.g. heat pump in parallel with the boiler on the same hydronic circuit and diverter valve for boiler exclusion), it may be necessary to enable a system temperature probe so that the unit controller can correctly manage the operation. The remote system probe controls the heat pump temperature only during the compressor start-up phase; shutdown is managed by the probe located on the heat pump flow line.
- **AG** - Anti-vibration kit – designed to prevent transmission of vibrations to the structure; must be installed under the unit, in the dedicated mounting holes.
- **Hi-TV415\*\*** - Color touchscreen wired remote controller for

centralized management of a chiller/heat pump cascade, for up to 7 units.

- **i-CR2\*\*** - Wall-mounted remote control – Modbus remote controller with negative LCD and capacitive keys. The device is intended to be used as a remote unit keypad with local temperature sensing and replicates the functions of the on-board unit controller.

(2) Internal heat exchanger water temperature = 23/18°C, air entering the external heat exchanger 35°C.

(3) Internal heat exchanger water temperature = 30/35°C, entering air temperature at the external heat exchanger = 7°C D.B./6°C W.B.

(4) Internal heat exchanger water temperature = 40/45°C, entering air temperature at the external heat exchanger = 7°C D.B./6°C W.B.

(5) Reference water temperature for internal heat exchanger = 12/7°C.

(6) Average climatic conditions; T<sub>biv</sub> = -7°C, internal heat exchanger water temperature = 30/35°C.

(7) Indicative data subject to change. For the correct data, always refer to the technical nameplate on the unit.

(8) The calculated value of minimum system water volume does not take into account the water

volume contained in the internal heat exchanger (evaporator). For applications with low outdoor air temperature or low average required loads, the minimum system water volume is obtained by doubling the indicated value.

(9) Sound power: Heating mode condition (3) according to EN 12102-1:2013, value determined on the basis of measurements carried out in accordance with UNI EN ISO 9614-1, in compliance with the requirements of the Eurovent and Heat Pump Keymark certifications.

(10) Sound pressure: Heating mode condition (3); value calculated from the sound power level using ISO 3744:2010 for the standard unit (without SL or SSL kit).

(11) Sound power: Heating mode at partial load according to Annex A of EN 12102:2017; value determined on the basis of measurements carried out in accordance with UNI EN ISO 9614-1, in compliance with the requirements of the Eurovent and Heat Pump Keymark certifications.

## Hybrid system heat pump & boiler

21 kW÷29 kW

Atria is the ideal solution for domestic/residential installations, especially in situations where replacement on an existing system is required.

Respect the environment by reducing carbon dioxide emissions. It is suitable for all types of domestic heating: underfloor heating systems, radiators, fan coils. To date, there are numerous incentives available for energy efficiency retrofits.

A hybrid system consists of a heat pump and a condensing boiler, expressly designed and developed by the manufacturer to operate together.

Maxa's new proposal makes it possible to have a hybrid system fully compliant with current regulations and capable of delivering high efficiency, without compromising an eco-friendly choice that reduces carbon dioxide emissions in favor of environmental sustainability.

**The technological integration that ensures:**

- Versatility
- Consumption reduction
- Environmental friendliness thanks to R32 refrigerant gas
- Possibility to choose between an indoor boiler (I) or an outdoor boiler (E)

## Accessories

### Specific accessories for ATRIA-I supplied separately

- CDP - 90° coaxial starting bend, diameter 60/100 mm
- SDO - Splitter D.80F-F
- TPV - 60/100mm coaxial starting stub

- DIMA - Template for Atria hybrid module
- Tap kit

### Specific accessories for ATRIA-E supplied separately

- DP - Starting diffuser for ATRIA E, 80 mm diameter (recommended accessory)
- Standard wired remote control for Atria E outdoor boiler module
- TPV - 60/100mm coaxial starting stub
- DIMA - Template for Atria hybrid module
- Tap kit

For accessories of the i-32V5 range, please refer to the chapter dedicated to the i-32V5 model.

## Wall-hung heat pump water heater with eco-friendly R290 refrigerant gas

105 liters

NEW

Wall-mounted heat pump water heater with eco-friendly R290 refrigerant, designed to combine energy efficiency, sustainability and ease of use.

Designed for wall installation, it features a 105-litre tank that combines compact dimensions with a refined design, making it ideal for domestic environments. Thanks to the integrated Wi-Fi connectivity, it can be managed remotely at any time via smartphone, allowing temperature control, timer programming and activation of the anti-legionella function with maximum convenience.

Available from February 2026

<b>R290</b> REFRIGERANT 0.02 GWP	<b>65°C</b> OUTLET WATER Supply Temperature	<b>70°C</b> ANTI-LEGIONELLA CYCLE BY DEFAULT	<b>A++</b> ENERGY EFFICIENCY CLASS				
----------------------------------------	------------------------------------------------------	-------------------------------------------------------	---------------------------------------------	--	--	--	--

The storage tank is made of vitreous enamelled steel, insulated with rigid polyurethane foam (PU). The condenser, not immersed in water, is wound around the steel tank. The rotary compressor ensures maximum efficiency and quiet operation. The centrifugal fan allows ducting of the air required for correct heat pump operation. Access to the coil is facilitated by the dedicated compartment. Excellent performance is achieved even with outdoor temperatures ranging from -5°C to +43°C, also thanks to the electronic expansion valve, which further enhances performance.

### Construction Features

- Refrigerant fluid R290.
- Remote device management via Wi-Fi.
- Boiler with a water capacity of 105 liters, made of S235 JR steel with internal vitreous enamel treatment and high-thickness rigid polyurethane foam (PU) insulation, free of CFCs and HCFCs.
- External casing in sheet metal painted with epoxy powders (white color).
- Anchor brackets for wall installation.
- Magnesium anode for corrosion protection.
- Hydraulic fittings positioned at the bottom.
- Microchannel condenser wound around the steel storage tank (not immersed in water).
- Built-in 1.5 kW 230V~ electric heater that can be activated via a control located on the control panel to heat the water from 65°C

(maximum temperature with the heat pump only) up to 70°C.

- Rotary compressor for maximum unit efficiency and quiet operation.
- Centrifugal fan for ducting the air required for the correct operation of the heat pump.
- Finned coil evaporator.
- Defrost function easily managed via hot-gas bypass.
- Safety thermostat set to +85°C.
- ON-OFF contact for starting the unit from an external switch.

Electronic controller equipped with control panel complete with LCD touch display, water temperature indicator, operation indicator lights for the heat pump and electric heater, controls with indicators for activating the different operating modes, and indications of any malfunctions/alarms, in particular:

- Anti-Legionella function
- Setting / viewing time and day
- Hot water temperature setpoint.

### Accessories

#### Standard supply

- Dielectric joints.
- Magnesium anode for corrosion protection.
- Bracket for wall mounting.
- Fixing screws and wall plugs.
- Spacers for wall mounting.
- Safety valve 8 bar.

#### Provided separately

- AG - Anti-vibration kit for floor installation.

\* Heating capacity and power input measured under the following conditions:  
room temperature 20°C, water temperature from 15°C to 55°C (data obtained from internal laboratory tests on uniform reheating of the storage tank temperature).

\*\* In relation to the auxiliary heater. During the disinfection cycle, the temperature is raised to 70°C by the auxiliary heater.

\*\*\* Obtained with the tank stored at an ambient temperature of 20°C, with ducted air inlet at 7°C and all other parameters in accordance with EN 16147.

\*\*\*\* According to EN 12102: ducted unit in/out 2 m.

\*\*\*\*\* Heat loss value of the tank alone, with ambient temperature at 20°C and stored water at 65°C.  
(1) rating data referring to integration with boiler in accordance with DIN 4708 standards (primary 80/60°C, secondary 10/45°C).

(2) measured according to standard EN 12102 under the conditions specified in standard EN 16147.

(3) calculated according to ISO 3744:2010 algorithm at 1 m from the unit.

# Calido 110

## Wall-hung heat pump water heater

110 litres

Air-to-water wall-mounted heat pump water heater. Thanks to its 110-liter water storage volume, Calido 110 offers high compactness and an attractive design. Perfect for replacing electric water heaters on existing systems, also thanks to its domestic hot water temperature setting, timer programming, and anti-legionella function. Installation is very simple and practical. By using renewable energy from the air, the unit is highly efficient and offers low operating costs. Its efficiency can be up to 3 to 4 times higher than traditional gas-fired storage water heaters or electric immersion heaters.

<b>R134A</b> REFRIGERANT 1430 GWP	<b>60°C</b> OUTLET WATER Supply Temperature	<b>70°C</b> ANTI-LEGIONELLA CYCLE BY DEFAULT	<b>A</b> ENERGY EFFICIENCY CLASS	 DOMESTIC HOT WATER	 OPERATING TEMPERATURE -5/+43°C
-----------------------------------------	------------------------------------------------------	-------------------------------------------------------	-------------------------------------------	---------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------

The storage tank is made of vitrified steel and insulated with rigid polyurethane foam (PU). The condenser, not immersed in water, is wound around the steel tank. The rotary compressor ensures maximum efficiency and quiet operation. The centrifugal fan allows air ducting as required for correct heat pump operation. Access to the coil is facilitated by a dedicated compartment.

Excellent performance is ensured even with outdoor temperatures ranging from -5°C to +43°C, thanks also to the electronic expansion valve, which improves performance and makes it eligible for the heating incentive scheme.

### Construction Features

- Boiler with a water capacity of 110 liters, made of S235 JR steel with internal vitrification treatment, insulated with high-thickness rigid polyurethane foam (PU) free of CFCs and HCFCs.
- External casing in sheet metal painted with epoxy powders (white color).
- Anchor brackets for wall installation.
- Magnesium anode for corrosion protection.
- Hydraulic fittings positioned at the bottom.
- Condenser wrapped around the steel storage tank (not immersed in water).
- Integrated 1.5 kW 230V~ electric heater, which can be activated via a control located on the control panel, to heat the water from 60°C (maximum temperature with the heat pump alone) up to 70°C. Rotary compressor for maximum unit efficiency and quiet operation.

- Centrifugal fan for ducting the air required for the correct operation of the heat pump.
- Finned coil evaporator.
- Refrigerant fluid R134a.
- Safety thermostat set to +85°C
- ON-OFF contact to start the unit from an external switch

Electronic controller equipped with control panel complete with LCD touch display, water temperature indicator, operation indicator lights for the heat pump and electric heater, controls with indicators for activating the different operating modes, and indications of any malfunctions/alarms, in particular:

- Anti-legionella function, scheduled cycle with 70°C water, by default once a week for a duration of 30 minutes.
- Setting / displaying time and day.
- Hot water temperature setpoint.

First-stage thermal protection (auto-reset): when the tank water temperature exceeds 80°C, the unit stops and E03 appears on the display.

Second-stage thermal protection (in case of failure of the first stage): the manual thermostat protection trips when the tank temperature reaches and exceeds 85°C; the electric heating element is deactivated until the protection is manually reset.

### Accessories

# Calido 190/250

Heat pump water heater with eco-friendly R290 refrigerant

190–250 litres

System that exploits the high efficiency of the air-to-water heat pump with eco-friendly R290 refrigerant, a sustainable choice that reduces environmental impact while ensuring maximum energy efficiency. The installation flexibility allows it to be placed both in technical rooms and in secondary areas of the home such as garages or laundry rooms; thanks to its refined, elegant design, it also blends seamlessly into living spaces. The Calido-S version allows integration with solar thermal panels, further expanding the possible applications in terms of energy savings and sustainability.

Available from March 2026

<b>R290</b> REFRIGERANT 0.02 GWP	<b>65°C</b> OUTLET WATER Supply Temperature	<b>70°C</b> ANTI-LEGINELLA CYCLE BY DEFAULT	<b>A+</b> ENERGY EFFICIENCY CLASS				
----------------------------------------	------------------------------------------------------	------------------------------------------------------	--------------------------------------------	--	--	--	--

## Construction Features

- **Remote device management via Wi-Fi.**
- **High-efficiency compressor with R290 refrigerant.**
- Carbon steel tank with double-layer enameling.
- Anti-corrosion magnesium anode to ensure tank durability.
- Microchannel condenser wound externally around the boiler, free from scaling and gas-water contamination.
- High-thickness thermal insulation in expanded polyurethane (PU).
- Outer cladding in grey plastic material.
- Acoustically insulated upper plastic cover.
- Gas low-pressure safety devices.
- Defrost function easily managed via hot-gas bypass.
- Electric heater available in the unit as back-up (with integrated safety thermostat set to 85°C), ensuring hot water at a constant temperature even under extreme winter conditions.
- ON-OFF contact for starting the unit from an external switch
- Weekly disinfection cycle.
- Possibility to manage domestic hot water recirculation or solar integration (presence of a dedicated temperature probe, flow switch input, and control for an external pump).
- Electronic expansion valve for precise control.

## Advantages:

- The effective setpoint of the heat pump is controlled by a climatic curve to prevent high-pressure alarms from occurring when warm outdoor air is drawn in (above 25°C with water at 65°C, above 35°C with water at 55°C).

## Accessories

### Provided separately

- **ONE-SAS** - Solar-DHW T6 temperature sensor. If there is the option to recirculate solar integration water or domestic hot water, the optional T6 probe must be connected to the

- The electric heater automatically integrates the tank temperature to the desired setpoint if the actual setpoint is being controlled by the climatic compensation curve.
- Provision for integration with photovoltaic system. When enabled by the photovoltaic inverter, the temperature setpoint is raised to the highest possible value (compatible with weather-compensated control).

### Flexibility and benefits:

- Heat recovery: the unit can be installed near the kitchen, in the utility room or in the garage. Practically in any room with a considerable amount of waste heat, so that it achieves high energy efficiency even at very low outdoor temperatures.
- Domestic hot water, cooling and dehumidification: the unit can be installed in a laundry room, garage, gym or basement. While producing domestic hot water, it cools and dehumidifies the room.
- Compatible with solar thermal: the unit can operate with a second energy source such as solar panels.
- The sole function for which the unit has been designed is that of a heat pump for the production of domestic hot water. Any other secondary effect (cooling, dehumidification, recovery of waste heat) must be regarded as an ancillary benefit. Performance data are therefore provided only with reference to the water heating function.

electrical box together with the flow switch and correctly positioned on the hydraulic system.

**Versions**

- CALIDO: standard that includes a heat pump and an electric heater.
- CALIDO-S: with auxiliary coil for use in combination with solar panels.

(3) calculated according to ISO 3744:2010 algorithm at 1 m from the unit.

# Calido 200/300

## Heat pump water heater

200–300 litres

System that exploits the high efficiency of the air-to-water heat pump and ensures low operating costs, with significant savings compared to traditional gas-fired cylinders or units equipped only with electric heating elements. Its installation flexibility allows it to be placed both in technical rooms and in secondary areas of the home such as garages or laundry rooms; thanks to its refined, elegant design, it also blends seamlessly into living spaces. The Calido-S and Calido-D versions allow integration with systems equipped with solar thermal panels and/or auxiliary heat sources such as boilers or hydronic pellet/wood stoves. Thanks to a dry-contact input, the system can be managed remotely or activated according to any automations coming from the home photovoltaic system.

<b>R134A</b> REFRIGERANT 1430 GWP	<b>65°C</b> OUTLET WATER Supply Temperature	<b>75°C</b> ANTI-LEGIONELLA CYCLE BY DEFAULT	<b>A</b> ENERGY EFFICIENCY CLASS	 DOMESTIC HOT WATER	 OPERATING TEMPERATURE -10/+43°C
-----------------------------------------	------------------------------------------------------	-------------------------------------------------------	-------------------------------------------	---------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------

### Construction Features

- Carbon steel tank with double-layer vitrification
- Anti-corrosion magnesium anode to ensure tank durability.
- Condenser wound externally around the boiler, free from scaling and gas-water contamination.
- High-thickness thermal insulation in expanded polyurethane (PU).
- Outer cladding in grey plastic material.
- Acoustically insulated upper plastic cover.
- High-efficiency compressor with R134a refrigerant.
- Gas high and low pressure safety devices.
- Electric resistance heater available in the unit as back-up (with integrated safety thermostat set at 90°C), ensuring a constant hot water temperature even under extreme winter conditions.
- ON-OFF contact to start the unit from an external switch.
- Weekly disinfection cycle.
- Possibility to manage domestic hot water recirculation or solar integration (presence of a dedicated temperature probe, flow switch input, and control for an external pump).
- Electronic expansion valve for precise control.

### Advantages

- The effective setpoint of the heat pump is controlled by a climatic curve to prevent high-pressure alarms from occurring when warm outdoor air is drawn in (above 25°C with water at 65°C, above 35°C with water at 55°C).
- The electric heater automatically integrates the tank temperature to the desired setpoint if the actual setpoint is being controlled by the climatic compensation curve.
- Provision for integration with a photovoltaic system. When the photovoltaic inverter is enabled, the temperature setpoint is raised to the highest possible value (compatible with weather-compensated control).

First-stage thermal protection (auto-reset): when the tank water temperature exceeds 85°C, the unit stops and EO3 is displayed. Second-stage thermal protection (if the first stage fails): the manual thermostat protection trips when the tank temperature reaches and exceeds 90°C; the electric heater is deactivated until the protection is manually reset.

### Accessories

#### Provided separately

- ONE-SAS - Solar/DHW T6 temperature sensor. If there is the option to recirculate solar integration water or domestic hot water, the optional T6 probe must be connected to the

electrical box together with the flow switch and correctly positioned on the hydraulic system.

#### Versions

- CALIDO: standard that includes a heat pump and an electric heater.
- CALIDO-S: with auxiliary coil for use in combination with solar panels.

- CALIDO-D: with double coil to simultaneously use three energy sources.

# Puffroller & PuffrollerOut

## Storage tank for hot and cold technical water

60÷1400 L

Designed to ensure maximum versatility and reliability: it can be integrated into any type of system and guarantees rapid storage with abundant, continuous delivery. Thanks to its high efficiency, it offers low operating costs while at the same time ensuring absolute hygiene and long service life with no risk of corrosion. Installation is simple, facilitated by an untreated interior and by specific mounting points for wall installation on the 60, 120 and 200 litre models, which can also be installed either horizontally or vertically. The 50 mm polyurethane foam insulation ensures excellent thermal performance, while the provision for the insertion of an auxiliary electric heating element further extends its functionality.

## Accessories

### Provided separately

- **RE1.5M3:** Single-phase electric heater 1.5 kW (L=340 mm) \*
- **RE2.0M3:** Single-phase electric heater 2.0 kW (L=390 mm) \*
- **RE3.0M3:** Single-phase electric heater 3.0 kW (L=390 mm) \*
- **VE24AT:** 24 l expansion vessel for storage tanks with capacity up to 500 l

- **VEP35AT:** 35 l expansion vessel for storage tanks with a capacity from 800 to 1000 l

\* Not for model 60-750-880-1400

### Versions

- **Puffroller:** For indoor installation only. Suitable for indoor installation, it ensures excellent energy performance, provided it is not exposed to weather conditions.
- **Puffroller-Out:** For indoor and outdoor installation. Suitable

for both indoor and outdoor installation, thanks to the additional coating that protects the tank even when exposed to atmospheric agents.

# B-Puffroller

Double buffer tank for technical water for domestic hot water production and system side

300/80-500/70 L

Integrated, compact solution designed to fit any type of system, ensuring rapid storage with abundant, continuous delivery. The high efficiency reduces operating costs while maintaining absolute hygiene and long service life with no risk of corrosion. Installation is straightforward thanks to the untreated internal structure and 50 mm polyurethane foam insulation, with the option to add an auxiliary electric heating element. In addition, the lower storage section allows the management of heating or chilled water, providing further versatility. For some versions, reinforced insulation in rigid polyurethane with a thickness of 70 mm is available, ensuring even higher thermal performance.

## Buffer tank for heating water with stratifier and removable domestic hot water heat exchanger

300÷800 L

Innovative storage system designed for use with alternative energy sources and for instantaneous domestic hot water production. Its structure incorporates a domestic hot water coil located in the upper section and a low-position diffuser, thus ensuring optimal performance with various plant configurations. The 100 mm soft polyurethane insulation provides high energy efficiency, while the possibility of integration with solar thermal systems, condensing boilers, heat pumps or wood-fired boilers makes the system extremely versatile. Instantaneous domestic hot water production, combined with stratification via hydraulic chimney and a 4 m<sup>2</sup> copper coil, guarantees maximum performance, absolute hygiene and long-lasting durability.

## DHW tank with internal treatment and coil for heat pump

300÷1000 L

Single-coil carbon steel storage tank, complete with anodic protection and internal treatment in accordance with DIN 4753 and UNI 10025 standards. Insulation: 50 mm rigid polyurethane (models 200–500), 100 mm soft polyurethane (models 800–1000). Designed to ensure rapid storage with abundant, continuous delivery, the system can be easily integrated into any type of plant, with low operating costs and long service life without risk of corrosion. The large heat exchange surface optimizes performance, while ease of installation and complete hygiene round out its advantages. The Barrel SE version is also available, equipped with a solar coil for greater integration with renewable energy sources.

# Hybridroller

Double DHW storage from heat pump and solar with thermal buffer for hot/chilled water

60÷500 L

This integrated, compact solution is designed to ensure maximum efficiency and practicality: it provides rapid storage capacity with abundant, continuous delivery and can be easily integrated into all types of systems. The large heat exchange surface optimizes performance, while the high efficiency keeps operating costs low. Designed to last over time with no risk of corrosion, it combines absolute hygiene, ease of installation, and a space-saving design that facilitates its use in any context.

# Hydrofull

## Hydronic modules for inverter heat pumps

The HydroFull range represents a complete and innovative solution, as it integrates all the main system components within a single enclosure, greatly simplifying the installation of heat pump systems.

The availability of 5 different models, with various types of domestic hot water storage and different sizes of buffer tanks, makes it possible to effectively meet a wide range of design requirements.

Domestic hot water production is provided by an AISI 316 L stainless steel tank, synonymous with high reliability and durability, available in two different capacities to suit various requirements.

Great attention has also been paid to installation flexibility: the different cabinet models allow both recessed installation in the wall and surface mounting, ensuring maximum versatility. Finally, the buffer storage is managed through standard or optional equipment that always ensures an adequate volume of technical water, optimizing the overall operation of the system.

HydroFull is compatible with the i-32V5 range, models 06A, 08A, 10, 10T A, 12, 12T A, and the i-290 range, models 0106, 0109, 0112.

## Accessories

### HydroFull-C - Supplied separately

- **CARTER:** Carter kit for side closure of cabinet to cover hydraulic connections in exposed installations
- **VE10C:** 10 L system expansion vessel kit

- **RE1.5M-R:** 1.5 kW electric heater complete with safety thermostat; operation is managed by the HP control electronics

### HydroFull-R - Supplied separately

- **BOX-R:** Cabinet for recessed or surface installation. Supplied disassembled.

- **RE1.5M-R:** 1.5 kW electric heater complete with safety thermostat; operation is managed by the HP control electronics

### HydroFull-L - Supplied separately

- **BOX-L-Z:** Zinc-plated recess-mount cabinet. Supplied disassembled
- **BOX-L-V:** Surface-mounted cabinet painted RAL 9016.

- Supplied disassembled
- **RE1.25M-L:** 1.25 kW electric heater, complete with safety thermostat, controlled by the HPU electronics

### HydroFull-X - Supplied separately

- **BOX-L-Z:** Zinc-plated recess-mount cabinet. Supplied disassembled
- **BOX-L-V:** Surface-mounted cabinet painted RAL 9016. Supplied disassembled

- **RE1.25M-L:** 1.25 kW electric heater, complete with safety thermostat, controlled by the HPU electronics
- **VE10AT:** 10 l expansion vessels for technical water storage

### HydroFull-Y - Supplied separately

- **BOX-L-Z:** Zinc-plated recess-mount cabinet. Supplied disassembled
- **BOX-L-V:** Surface-mounted cabinet painted RAL 9016. Supplied disassembled
- **RE1.25M-L:** 1.25 kW electric heater, complete with safety

- thermostat, controlled by the HPU electronics
- **VE10AT:** 10 l expansion vessels for technical water storage
- **KR-L:** Direct booster group with standard pump, 6 m head
- **K-MIX-L:** Mixed booster group (230V) with standard circulator, 6 m head

## Versions

### HydroFull-C

- Cabinet:** white-painted for recessed or exposed installations (only 70 cm wide, 35 cm deep and 2.2 m high), with practical front opening for easy inspection and maintenance.
- Boiler:** vertical stainless steel, 150-litre capacity, with high stratification and oversized coil with large heat exchange surface, with the option of integration with an electric heating element (optional).

- Buffer** tank 20 liters.
- Booster kit:** direct zone downstream of the hydraulic decoupler.
- Hydraulic and electrical kit** for connection with heat pumps of the i-32V5 series and the i-290 series, including: 3-way valve with priority on the DHW side, 6-litre DHW expansion vessel, thermostatic mixing valve, system filling unit, booster circulator with 7 m head, hydraulic separator.

### HydroFull-R

- Cabinet:** white painted, for recessed or exposed installations, with a practical front opening for simplified inspections and maintenance (accessory).
- Storage tank:** vertical, in 316L stainless steel, high-stratification, with a capacity of 150 litres, with a single elliptical coil featuring a double concentric helix, providing 1.2 m<sup>2</sup> of

surface area.

- Hydraulic and electrical kit** including: 3-way valve with DHW priority, 20-litre buffer tank to optimise the modulation accuracy of the heat pump, thermostatic mixing diverting valve, 6-litre DHW expansion vessel, tap kit.

\*All components are supplied in dedicated mounting kits.

Hatching = supply perimeter

## Versions

### HydroFull-L

- **Cabinet:** supplied disassembled, in galvanized sheet metal for recessed installation, with top-hinged flap doors, or self-supporting cabinet supplied pre-assembled, in RAL 9016 painted sheet metal, with top-hinged flap doors.
- **Domestic hot water circuit:** with AISI 316L stainless steel storage tank, 200 l capacity, with heat exchanger for heat pump with nominal output up to 12 kW.
- **Hydraulic circuit:** for connection to the heat pump system.

i-290

- **Associated materials:** DHW diverting valve, boiler connection pipes, DHW circuit connection pipes, safety devices, thermostatic valve, DHW expansion vessel.

\*All components are supplied in dedicated mounting kits.

HydroFull L

### HydroFull-X

- **Cabinet:** supplied disassembled, in galvanized sheet metal for recessed installation, with top-hinged flap doors, or self-supporting cabinet supplied pre-assembled, in RAL 9016 painted sheet metal, with top-hinged flap doors.
- **Domestic hot water circuit:** with AISI 316L stainless steel storage tank, 200 l capacity, with heat exchanger for heat pump with nominal output up to 12 kW.
- **40-litre technical water buffer tank**

- **Hydraulic circuit:** for connection to the heat pump system.
- **Accessories:** domestic hot water diverter valve, connection pipes to the storage tank, connection pipes for the domestic hot water circuit safety devices, thermostatic valve, domestic hot water expansion vessel, direct supply to the system.

\*All components are supplied in dedicated mounting kits.

i-290

HydroFull X

Hatching = supply perimeter

## Versions

### HydroFull-Y

- Cabinet:** supplied disassembled, in galvanized sheet metal for recessed installation, with top-hinged flap doors, or self-supporting cabinet supplied pre-assembled, in RAL 9016 painted sheet metal, with top-hinged flap doors.
- Domestic hot water circuit:** with AISI 316L stainless steel storage tank, 200 l capacity, with heat exchanger for heat pump with nominal output up to 12 kW.

- Hydraulic circuit:** for connection to the heat pump system.

- Standard accessories:** domestic hot water diverter valve, boiler connection pipes, domestic hot water circuit connection pipes, safety devices, thermostatic valve, domestic hot water expansion vessel, provision for two booster pumps.

- 40-litre technical water buffer tank**

\*All components are supplied in dedicated mounting kits.

# Aqua Speedy

## Fast domestic hot water generator

18÷25 L

Aqua Speedy is an instantaneous domestic hot water producer with a water/water-type heat exchanger made of brazed stainless-steel plates. Domestic hot water temperature is controlled by a factory-mounted thermostatic mixing valve. An external energy source, from which the energy required to produce DHW is drawn, is always necessary. This energy source is usually a buffer tank kept at temperature by the heat pump. A circulator inside AquaSpeedy regulates the amount of required energy according to the DHW draw-off profile. AquaSpeedy therefore allows domestic hot water to be produced in complete safety.

### Advantages

- Instantaneous domestic hot water
- Nominal DHW delivery 18 or 25 l/min
- High efficiency thanks to the oversized stainless steel plate heat exchanger
- Maximum reduction of water stagnation with a consequent decrease in the risk of Legionella
- Wall or tank installation
- Quick installation and easy maintenance
- Complete with black EPP thermal insulation, 40 g/l.

### Use

In residential, commercial, and tertiary heat pump systems, Aqua Speedy is a suitable solution for providing instantaneous domestic hot water production.

Aqua Speedy	Maximum secondary outlet flow rate (DHW)	l/m	18	25

### Versions

- 18: 18 liters per minute with inlet 10°C, outlet 48°C and buffer tank 55°C
- 25: 25 liters per minute with inlet 10°C, outlet 48°C and buffer tank 55°C

## Range of chillers and reversible heat pumps with scroll compressors and R290 refrigerant

- A single solution for heating, cooling and domestic hot water production with guaranteed performance all year round.
- Sustainability, technology and reliability make this range suitable for integration in both commercial and industrial applications, thanks to the use of fixed-speed scroll compressor technology.
- The HWA2 range is designed to achieve water temperatures suitable for a wide variety of applications, including the indirect production of domestic hot water.

- The range includes **8 sizes**, available in cooling-only or heat pump versions.

- **Double range: chillers and reversible heat pumps.**  
**HWA2-A** represents the range of chillers suitable for both comfort and industrial applications, thanks to the BT version, which allows fluid operating temperatures down to -8°C.  
**HWA2-AH** thanks to its wide operating range and high maximum water temperature, it can easily be used both for new systems and for the replacement of existing systems.
- **3 different frames to meet every need**  
The 8 different HWA2 sizes require different configurations; for this reason, 3 new frames have been developed, capable of accommodating all the components necessary for their proper operation.

- **Extensive hydraulic configurability**  
Each size in the HWA2 range can be configured with various circulation pump models, which can optionally be complemented, on request, by the corresponding storage tank.  
In addition, the hydraulic connections to the distribution system can be easily oriented, optimizing the connection to it (04140-04155-04170).

HWA2

**0270-0280-0290**

- 2 scroll compressors
- single refrigeration circuit
- optional: single AC pump, double AC pump, single inverter pump
- optional: integrated tank
- EC fans as standard (version A)
- optional: EC fans (AH version)
- optional: SL or SSL version

HWA2

**04110-04120**

- 4 scroll compressors
- dual refrigeration circuit
- optional: single AC pump, double AC pump, single inverter pump
- optional: integrated tank
- EC fans as standard (version A)
- optional: EC fans (AH version)
- optional: SL or SSL version

HWA2

**04140-04155-04170**

- dual refrigeration circuit
- optional: single AC pump, double AC pump, single inverter pump
- optional: integrated tank
- EC fans as standard (version A)
- optional: EC fans (AH version)
- optional: SL or SSL version

# HWA2-A 0270÷04170

## Air-cooled water chiller, with scroll compressors, axial fans and R290 GAS

70 kW÷170 kW

The HWA2 range uses the natural refrigerant R290, which drastically reduces environmental impact and offers top-level energy performance.

Designed for commercial and industrial applications and equipped with large-surface air-side heat exchangers, they ensure high efficiency, with SEER values among the highest in their category.

The use of high-efficiency, particularly robust scroll compressors, together with the oil recovery and distribution system adopted on tandem circuits, ensures high reliability and consistent performance.

Available in 8 sizes.

NEW

**Carpentry:** all units in the series feature a structure suitable for outdoor installation, made of hot-dip galvanized steel sheet and coated with RAL 7035/RAL 7046 polyester powder paint (only for certain components) to ensure maximum resistance to atmospheric agents. All screws and inserts are in galvanized and stainless steel.

**Compressors:** scroll type, specifically designed to operate with R290, mounted on a double anti-vibration slide. The permanently installed crankcase heater is activated when the compressor is stopped and is disabled when it restarts.

**Air-side heat exchangers:** entirely made of aluminum using microchannel technology, which significantly reduces both air-side pressure drops and refrigerant charge, while at the same time ensuring higher heat transfer capacity for the same frontal surface area compared to traditional heat exchangers.

**User side heat exchangers:** of the brazed-plate type. Made of AISI stainless steel for both single-circuit and dual-circuit units, factory-insulated with closed-cell material. They can be equipped with an electric antifreeze heater (optional accessory KA). A differential pressure switch, installed on the water side, ensures the presence of water flow, preventing ice formation inside.

**Fans:** axial type with airfoil blades. They are statically and dynamically balanced and supplied complete with protective grille and inlet/outlet nozzles with double flared profile, specially shaped to increase efficiency and reduce noise. The motor has a degree of protection IP54 according to CEI EN 60529. The electric motor used is modulation-controlled with a directly coupled EC brushless motor and equipped with integrated thermal protection, which ensures condensation control down to an outdoor temperature of -20 °C.

**Refrigeration circuit:** built using components from leading international manufacturers and in accordance with UNI EN 13134. The refrigerant gas is R290. In its basic version, the refrigeration circuit includes: electronic expansion valve, service valves for maintenance and control, safety device compliant with current regulations (two high-pressure switches per circuit), pressure transducers to accurately measure evaporation and condensation pressures, filter drier, sight glass for monitoring the refrigerant charge, and solenoid valve.

**Electrical panel:** fully manufactured and wired in compliance with standard EN 60204, comprising a power section and a control section. The degree of protection of the electrical panel is IP54. The electrical panel is equipped with a terminal block with volt-free contacts for remote ON-OFF.

**Control system:** all units are equipped with a microprocessor control board with superheat control logic managed on the basis of the signals sent by the pressure transducers and temperature probes. The CPU also controls the following functions: regulation of the water temperature, antifreeze protection, compressor start-up and timing, management of fan and circulation pumps (if present), alarm reset, alarm signaling and operation LEDs.

ModBus RTU RS-485 interface available as standard on the terminal block.

**Control and protection devices:** all units are equipped with the following control and protection devices: phase monitor complete with minimum and maximum voltage relay, which stops the unit if the phase sequence is incorrect or if the voltage of at least one phase differs by more than 10% from the others. Leaving water temperature sensor (with antifreeze function for the water circuit), return water temperature sensor, low-pressure transducer, high-pressure transducer, discharge temperature sensor on the compressors, suction temperature sensor on the compressors, outdoor air temperature sensor. Thermomagnetic circuit breakers for the protection of: transformer, compressors, pumps (if present) and fans, fan thermal protection, thermal protection on each compressor, differential pressure switch on the water side, two manually reset high-pressure switches installed on the compressor discharge line.

**Hydraulic circuit:** the HWA2 series can be supplied with a built-in, highly configurable hydronic kit which, in addition to the differential pressure switch, can include a single pump or a twin-pump set (one in standby as backup to the other), suitable for use with chilled water containing glycol up to 50%, and directly managed by the onboard unit controller. It is also possible to install an internal inertial buffer tank, externally insulated with closed-cell expanded material, with a capacity suitable for the unit size.

**R290 gas safety:** the HWA2 series is equipped with an automatic electronic system for detecting any R290 gas releases. Activation of the R290 gas safety system starts the ATEX fan in the compressor compartment, ensuring rapid dispersion and dilution of the gas. When the unit is fitted with a pump kit or twin pump, a second R290 detector is added, providing an additional level of monitoring and increasing the overall safety of the installation.

## Operating Areas

 A1 = HWA2-A BT

## Accessories

### Factory-installed

- KA1\*** - Antifreeze heater for heat exchanger and pump (if present) - electric heating element installed on the front face of the plate heat exchanger, which is activated when the water temperature inside the exchanger falls below +4°C, and electric heating element that protects the pump motor at low temperatures.
- SL \*\*** - The silenced unit features an innovative acoustic insulation applied to the compressor compartment panels. This system significantly reduces noise during operation, improving the acoustic comfort of the surrounding environment.
- SSL \*\*** - The super-silenced unit combines the acoustic insulation applied to the compressor compartment panels with a special diffuser mounted on the fan. This diffuser increases its efficiency, allowing the speed to be reduced, lowering the sound pressure level and optimizing energy consumption.
- PS \*\*\*** - Reversible heat pump, heating-only version with standard head.
- PSAP \*\*\*** - Reversible heat pump, high head pump-only version.
- PSI\*\*\*** - AC circulation pump controlled by an external inverter installed in the electrical panel.
- PSIAP\*\*** - High head AC circulation pump controlled by an external inverter installed in the electrical panel.
- PD \*\*\*** - Reversible heat pump, dual-pump version with standard head.
- PDAP \*\*\*** - Reversible heat pump, dual high-head pump version.
- PS-SI \*\*\*** - Reversible heat pump, pump-only version with standard head + tank and expansion vessel.
- PSAP-SI \*\*\*** - Reversible heat pump, high-head pump only version + tank and expansion vessel.
- PSI-SI\*\*\*** - AC circulation pump controlled via external inverter

installed in the electrical panel + tank and expansion vessel.

- PSIAP-SI\*\*\*** - High head AC circulation pump controlled via external inverter installed in the electrical panel + tank and expansion vessel.
- PD-SI \*\*\*** - Reversible heat pump, dual-pump version with standard head + tank and expansion vessel.
- PDAP-SI \*\*\*** - Reversible heat pump, high-head double pump version + tank and expansion vessel.
- TR1** - Microchannel coil with Aero surface treatment. The treatment consists of spraying a special water-based coating, formulated with new resins offering extremely high chemical resistance. The product is flexible to withstand thermal contractions and expansions, UV-resistant, dirt-repellent, mechanically resistant, with very limited reduction in heat transfer and virtually no impact on air-side pressure drops. The treatment withstands 6,000 h according to ASTM B117.
- TR1C4** - Anti-corrosion treatment on coil and sheet metal - includes a TR1-type treatment on the coil and, in addition, the hot-dip galvanized steel panels are painted so as to make them suitable for unit installation in C4H environments, according to UNI EN 12944. The external fastening hardware is made of AISI 304 material, class A2.
- C4** - The hot-dip galvanized steel panels are painted to ensure compliance with installation in C4H-class environments, in accordance with UNI EN 12944. The external fastening hardware is made of AISI 304 stainless steel (A2 class), ensuring corrosion resistance and long-term durability.
- BT** - The BT accessory allows the operating range of the water temperature to be extended down to -8°C. In this case, it is mandatory to use a water-glycol mixture suitable for the operating point and for the minimum temperature reached by the system.

\*\* Accessories not usable simultaneously

\*\*\* Accessories not usable simultaneously

## Accessories

- **EC-CC** - Modulating EC fan. Includes the CC function, condensation control down to -20°C. Mandatory accessory for cooling-only versions, comfort applications, EU market.
- **GR2** - Battery compartment anti-intrusion kit - wire mesh to prevent the entry of foreign objects into the coil and to protect the coil from accidental contact by people or objects.
- **GR4** - Anti-intrusion kit for hydraulic circuit compartment and anti-intrusion kit for coil compartment.
- **SS** - Soft starter - electronic static starter for inrush current management, installed inside the electrical panel; it allows a reduction of inrush current and of mechanical wear on the motor windings.
- **KS** - Lifting bracket kit - facilitates lifting and positioning of the unit.
- **MN** - External pressure gauges for quick monitoring of high and low pressure; four gauges in dual-circuit units.

### Provided separately

- **AG** - Rubber anti-vibration kit - designed to prevent vibration transmission to the structure; they are to be installed beneath the unit, in the designated mounting holes.
- **AM** - Spring anti-vibration kit - designed to prevent transmission of vibrations to the structure; they must be installed underneath the unit, in the designated holes.
- **FY** - Y-strainer - contains a stainless steel mesh screen (500 µm filtration) that collects solid materials present in the water. Filtration prevents blockage and/or damage to the devices installed downstream of the strainer. Alternatively, it is possible to install a dirt separator that ensures a filtration level not greater than 1 mm (in this case, it is no longer necessary to install the Y-strainer).
- **SAS** - Remote system probe.
- **TQE** - Rainproof cover for electrical panel.
- **RV** - Grooved coupling joint kit with carbon steel pipe stubs, complete with grooved connection to the unit and flanged connection with gasket for direct connection to the system.
- **ISK\*\*** - USB/RS485 serial converter - interface device capable of reading and writing control registers via the RS485 standard and converting them to a USB port that can be connected to any supervision system.
- **LNC\*\*** - LAN-Wi-Fi router - device that allows the unit to be connected to a local network via Ethernet cable or Wi-Fi coverage for remote monitoring.
- **OVPN\*\*** - 3G LAN-Wi-Fi router with VPN tunnel - device that allows the unit to be connected remotely with an industrial

- router using the secure OPENVPN service.
- **i-CR2\*\*** - Wall-mounted remote control - Modbus remote controller with negative LCD and capacitive keys. The device is intended to be used as a remote unit keypad with local temperature sensing and replicates the functions of the on-board unit controller.
- **Hi-TV415\*\*** - Color touch screen wired remote controller for the centralized management of a cascade of chillers/heat pumps, for up to 7 units.

(1) Internal heat exchanger water temperature = 12/7°C, air entering the external heat exchanger 35°C.

(2) Internal heat exchanger water temperature = 23/18°C, air entering the external heat exchanger 35°C.

(3) Cooling: low temperature, variable output, constant flow rate.

(4) Data is indicative and subject to change. For the correct value, always refer to the technical label on the unit.

(5) The calculated value of minimum system water volume does not take into account the water volume contained in the internal heat exchanger (evaporator). For applications with low outdoor air temperature or low required average loads, the minimum system water volume is obtained by doubling the indicated value.

(6) Condition (1); value determined on the basis of measurements carried out in accordance with UNI EN ISO 9614-2, in compliance with the requirements of Eurovent certification.

#### Preliminary data

(7) Value calculated from the sound power level using ISO 3744:2010, referenced to a distance of 10 m from the unit.

(8) Cooling BT version: outdoor air temperature 35°C, internal heat exchanger water temperature = -3/-8°C. Fluid treated with 35% ethylene glycol.

(9) Calculated according to AHRI 551/591 (SI) standard.

The performance data provided are indicative and may be subject to change. The capacities declared at points (1), (2), (8) refer to the instantaneous output in accordance with EN 14511:2022. The data declared at point (3) are determined in accordance with UNI EN 14825:2022.

(1) Internal heat exchanger water temperature = 12/7°C, air entering the external heat exchanger 35°C.

(2) Internal heat exchanger water temperature = 23/18°C, air entering the external heat exchanger 35°C.

(3) Cooling: low temperature, variable output, constant flow rate.

(4) Data is indicative and subject to change. For the correct value, always refer to the technical label on the unit.

(5) The calculated value of minimum system water volume does not take into account the water volume contained in the internal heat exchanger (evaporator). For applications with low outdoor air temperature or low required average loads, the minimum system water volume is obtained by doubling the indicated value.

(6) Condition (1); value determined on the basis of measurements carried out in accordance with UNI EN ISO 9614-2, in compliance with the requirements of Eurovent certification.

(7) Value calculated from the sound power level using ISO 3744:2010, referenced to a distance of 10 m from the unit.

(8) Cooling BT version: outdoor air temperature 35°C, internal heat exchanger water temperature = -3/-8°C. Fluid treated with 35% ethylene glycol.

(9) Calculated according to AHRI 551/591 (SI) standard.

The performance data provided are indicative and may be subject to change. The capacities declared at points (1), (2), (8) refer to the instantaneous output in accordance with EN 14511:2022. The data declared at point (3) are determined in accordance with UNI EN 14825:2022.

WEEE for Italian market only.

# HWA2-AH 0270÷04170

Reversible air/water heat pump, with scroll compressors, axial fans and R290 REFRIGERANT GAS

70 kW÷170 kW

The HWA2 range uses natural refrigerant R290, which drastically reduces environmental impact and delivers top-level energy performance.

Designed for commercial and industrial applications and equipped with large-surface air-side heat exchangers, they ensure high efficiency, with SCOP and SEER values among the highest in their category.

The use of high-efficiency, particularly robust scroll compressors, together with the oil recovery and distribution system adopted on tandem circuits, ensures high reliability and consistent performance. Available in 8 sizes.

MADE IN ITALY	R290 REFRIGERANT 0.02 GWP	78°C OUTLET WATER Supply Temperature	SCROLL COMPRESSORS	SUPER SILENCED VERSION	VERSION BT	MODBUS AVAILABLE AS STANDARD
---------------	---------------------------------	-----------------------------------------------	-----------------------	---------------------------	---------------	------------------------------------

**Carpentry:** all units in the series feature a structure suitable for outdoor installation, made of hot-dip galvanized steel sheet and coated with RAL 7035/RAL 7046 polyester powder paint (only for certain components) to ensure maximum resistance to atmospheric agents. All screws and inserts are in galvanized and stainless steel.

**Compressors:** scroll type, expressly designed to operate with R290, mounted on a double anti-vibration slide. The crankcase heater, which is always present, is activated when the compressor is stopped and is disabled when it restarts.

**Air side heat exchangers:** finned coil type, made with copper tubes and aluminum fins with corrugated surface, spaced appropriately to ensure maximum heat exchange efficiency.

At the base of the heat exchangers, there are drain pans for the collection and drainage of condensate water.

**User side heat exchangers:** of the brazed-plate type. Made of AISI stainless steel for both single-circuit and dual-circuit units, factory-insulated with closed-cell material. They can be equipped with an electric antifreeze heater (optional accessory KA). A differential pressure switch, installed on the water side, ensures the presence of water flow, preventing ice formation inside.

**Fans:** axial type with airfoil-profile blades. They are statically and dynamically balanced and supplied complete with protection grille and inlet and outlet air nozzles with double flared profile, specially shaped to increase efficiency and reduce noise. The motor has an IP54 protection rating according to CEI EN 60529. EC fans, with EC electric motor driven in modulation, are available as accessories on request.

**Refrigeration circuit:** is made using components from leading international manufacturers and in accordance with UNI EN 13134. The refrigerant gas is R290. In its basic version, the refrigeration circuit includes: electronic expansion valve, inspection valves for maintenance and control, a safety device compliant with current regulations (two high-pressure switches per circuit), pressure transducers to accurately measure evaporation and condensation pressures, high-capacity filter drier to prevent expansion valve clogging and remove any moisture present in the circuit, liquid sight glass for checking the refrigerant charge, solenoid valve, 4-way cycle-reversing valve, liquid separator, liquid receiver, and the outdoor air temperature sensor.

**Electrical panel:** fully manufactured and wired in compliance with standard EN 60204, comprising a power section and a control section. The degree of protection of the electrical panel is IP54. The electrical panel is equipped with a terminal block with volt-free contacts for

remote ON-OFF.

**Control system:** all units are equipped with a control board featuring a microprocessor with superheat control logic managed based on the signals sent by pressure transducers and temperature probes. The CPU also controls the following functions: water temperature regulation, antifreeze protection, compressor start-up and timing, fan and circulation pump management (if present), alarm reset, alarm indication and operating status LEDs. On request, the microprocessor can be connected to remote BMS control systems. ModBus RTU RS-485 interface available as standard on the terminal block.

**Control and protection devices:** all units are equipped with the following control and protection devices: phase monitor complete with minimum and maximum voltage relay, which stops the unit if the phase sequence is incorrect or if the voltage of at least one phase differs by more than 10% from the others. Leaving water temperature sensor (with antifreeze function for the water circuit), return water temperature sensor, low-pressure transducer, high-pressure transducer, discharge temperature sensor on the compressors, suction temperature sensor on the compressors, outdoor air temperature sensor. Thermomagnetic circuit breakers for the protection of: transformer, compressors, pumps (if present) and fans, fan thermal protection, thermal protection on each compressor, differential pressure switch on the water side, two manually reset high-pressure switches installed on the compressor discharge line.

**Hydraulic circuit:** the HWA2 series can be supplied with a built-in, highly configurable hydronic kit which, in addition to the differential pressure switch, can include a single pump or a twin-pump set (one in standby as backup to the other), suitable for use with chilled water containing glycol up to 50%, and directly managed by the onboard unit controller. It is also possible to install an internal inertial buffer tank, externally insulated with closed-cell expanded material, with a capacity suitable for the unit size.

**R290 gas safety:** the HWA2 series is equipped with an automatic electronic system for detecting any R290 gas releases. Activation of the R290 gas safety system starts the ATEX fan in the compressor compartment, ensuring rapid dispersion and dilution of the gas. When the unit is fitted with a pump kit or twin pump, a second R290 detector is added, providing an additional level of monitoring and increasing the overall safety of the installation.

## Operating Areas

A = HWA2-AH cooling

A1 = HWA2-AH BT

A2 = HWA2-AH with EC-CC accessory (condensation control down to -20°C)

## Accessories

### Factory-installed

- KA1\*** – Antifreeze heater for heat exchanger and pump (if present) – electric heating element installed on the front face of the plate heat exchanger, which is activated when the water temperature inside the exchanger falls below +4°C, and electric heating element that protects the pump motor at low temperatures.
- KA4\*** – Electric heater located on the front side of the plate heat exchanger, activated when the water temperature drops below +4°C, and heater that protects the pump motor at low temperatures. It also includes heaters in the drain pans that collect water from coil defrosting, preventing ice formation.
- SL \*\*** – The silenced unit features an innovative acoustic insulation applied to the compressor compartment panels. This system significantly reduces noise during operation, improving the acoustic comfort of the surrounding environment.
- SSL \*\*** – The super-silenced unit combines the acoustic insulation applied to the compressor compartment panels with a special diffuser mounted on the fan. This diffuser increases its efficiency, allowing the speed to be reduced, lowering the sound pressure level and optimizing energy consumption.

- PS \*\*\*** – Reversible heat pump, heating-only version with standard head.
- PSAP \*\*\*** – Reversible heat pump, high head pump-only version.
- PSI\*\*\*** – AC circulation pump controlled by an external inverter installed in the electrical panel.
- PSIAP\*\*\*** – High-head AC circulation pump controlled via an external inverter installed in the electrical panel.
- PD \*\*\*** – Reversible heat pump, dual-pump version with standard head.
- PDAP \*\*\*** – Reversible heat pump, dual high-head pump version.
- PS-SI\*\*\*** – Reversible heat pump, pump-only version with standard head + tank and expansion vessel.
- PSAP-SI \*\*\*** – Reversible heat pump, high-head pump only version + tank and expansion vessel.
- PSI-SI\*\*\*** – AC circulation pump controlled via external inverter installed in the electrical panel + tank and expansion vessel.
- PSIAP-SI\*\*\*** – High head AC circulation pump controlled via

\*\* Accessories not usable simultaneously

\*\*\* Accessories not usable simultaneously

## Accessories

external inverter installed in the electrical panel + tank and expansion vessel.

- **PD-SI \*\*\*** – Reversible heat pump, dual-pump version with standard head + tank and expansion vessel.
- **PDAP-SI \*\*\*** – Reversible heat pump, high-head double pump version + tank and expansion vessel.
- **TR2** – Cu/Al coil with Silver Line surface treatment. Finned coil heat exchangers with copper tubes and aluminium fins, subjected to treatment with a special polyurethane-based paint for corrosion protection. The protection provides the coil with flexibility to withstand thermal contraction and expansion, UV resistance, and makes it dirt-repellent. The treatment ensures coil protection under virtually all environmental conditions: from marine to rural environments, from industrial to urban areas. For specific instructions on cleaning coils treated in this way, refer to the relevant chapter in the user-installer manual. The treatment withstands 6000 h according to ASTM B117.
- **TR2C4** – Anti-corrosion treatment on coil and sheet metal – includes a TR2-type treatment on the coil and, in addition, the hot-dip galvanized steel panels are painted to make them suitable for installing the unit in C4H environments, in accordance with UNI EN 12944. The external fastening hardware is made of AISI 304 material, class A2.
- **C4** – The hot-dip galvanized steel panels are painted to ensure compliance with installation in C4H-class environments,

in accordance with UNI EN 12944. The external fastening hardware is made of AISI 304 stainless steel (A2 class), ensuring corrosion resistance and long-term durability.

- **BT** – The BT accessory allows the operating range of the water temperature to be extended down to -8°C. In this case, it is mandatory to use a water-glycol mixture suitable for the operating point and for the minimum temperature reached by the system.
- **EC-CC** – Modulating EC fan. Includes CC function, condensing pressure control down to -20°C.
- **GR2** – Battery compartment anti-intrusion kit – wire mesh to prevent the entry of foreign objects into the coil and to protect the coil from accidental contact by people or objects.
- **GR4** – Anti-intrusion kit for hydraulic circuit compartment and anti-intrusion kit for coil compartment.
- **SS** – Soft starter – electronic static starter for inrush current management, installed inside the electrical panel; it allows a reduction of inrush current and of mechanical wear on the motor windings.
- **KS** – Lifting bracket kit – facilitates lifting and positioning of the unit.
- **MN** – External pressure gauges for quick monitoring of high and low pressure; four gauges in dual-circuit units.

### Provided separately

- **AG** – Rubber anti-vibration kit – designed to prevent vibration transmission to the structure; they are to be installed beneath the unit, in the designated mounting holes.
- **AM** – Spring anti-vibration kit – designed to prevent transmission of vibrations to the structure; they must be installed underneath the unit, in the designated holes.
- **FY** – Y-strainer – contains a stainless steel mesh screen (500 µm filtration) that collects solid materials present in the water. Filtration prevents blockage and/or damage to the devices installed downstream of the strainer. Alternatively, it is possible to install a dirt separator that ensures a filtration level not greater than 1 mm (in this case, it is no longer necessary to install the Y-strainer).
- **SAS** – Remote system probe.
- **TQE** – Rainproof cover for electrical panel.
- **RV** – Grooved coupling joint kit with carbon steel pipe stubs, complete with grooved connection to the unit and flanged connection with gasket for direct connection to the system.
- **ISK\*\*** – USB/RS485 serial converter – interface device capable of reading and writing control registers via the RS485 standard and converting them to a USB port that can be connected to any supervision system.
- **LNC\*\*** – LAN-Wi-Fi router – device that allows the unit to be connected to a local network via Ethernet cable or Wi-Fi

coverage for remote monitoring.

- **OPN\*\*** – 3G LAN-Wi-Fi router with VPN tunnel – device that allows the unit to be connected remotely with an industrial router using the secure OPENVPN service.
- **i-CR2\*\*** – Wall-mounted remote control – Modbus remote controller with negative LCD and capacitive keys. The device is intended to be used as a remote unit keypad with local temperature sensing and replicates the functions of the on-board unit controller.
- **Hi-TV415\*\*** – Color touch screen wired remote controller for the centralized management of a cascade of chillers/heat pumps, for up to 7 units.

(1) Internal heat exchanger water temperature = 12/7°C, air entering the external heat exchanger 35°C.  
 (2) Internal heat exchanger water temperature = 23/18°C, air entering the external heat exchanger 35°C.  
 (3) Internal heat exchanger water temperature = 30/35°C, entering air temperature at the external heat exchanger = 7°C D.B./6°C W.B.; EC fans  
 (4) Internal heat exchanger water temperature = 47/55°C, entering air temperature at the external heat exchanger = 7°C D.B./6°C W.B.; EC fans  
 (11) Internal heat exchanger water temperature = 55/65°C, entering air temperature at the external heat exchanger = 7°C D.B./6°C W.B.; EC fans  
 (5) Cooling: low temperature, variable output, constant flow rate.  
 (6) Average climatic conditions; Tbiv = -4°C, internal heat exchanger water temperature = 30/35°C; EC fans  
 (7) Indicative data, subject to change. For the correct data, always refer to the technical nameplate on the unit.

(8) The calculated value of minimum system water volume does not take into account the water volume contained in the internal heat exchanger (evaporator). For applications with low outdoor air temperatures or low required average loads, the minimum system water volume is obtained by doubling the indicated value.  
 (9) Condition (3); value determined on the basis of measurements carried out in accordance with standard UNI EN ISO 9614-2, in compliance with the requirements of Eurovent certification.  
 (10) Value calculated from the sound power level using ISO 3744:2010, referred to a distance of 10 m from the unit.  
 The stated performance data are indicative and may be subject to variation. The capacities declared at points (1), (2), (3), (4) refer to the instantaneous output in accordance with EN 14511. The data declared at points (5), (6) are determined in accordance with UNI EN 14825.

## HWA1-A/H 0140÷0285 \*

### Water chiller and heat pump reversible air/water

40 kW÷85 kW

The water chillers and air/water heat pumps have been designed for commercial and industrial applications; they are very compact yet equipped with large-surface air-side heat exchangers, ensuring high efficiency with EER and COP among the highest in their category.

The use of high-efficiency, particularly robust scroll compressors together with the oil recovery and distribution system used on tandem circuits ensures high reliability and consistent performance.

**Carpentry:** all units in the series are manufactured from hot-dip galvanized sheet metal and painted with polyurethane powder coatings baked at 180°C to ensure maximum resistance to atmospheric agents.

**Refrigerant circuit:** made using components from leading international manufacturers and in compliance with UNI EN 13134. The refrigerant used is R410A. The refrigerant circuit in its basic version includes: electronic expansion valve, liquid separator, liquid receiver, service valves for maintenance and control, safety device compliant with the PED directive (high-pressure switch), safety valve for the refrigerant, pressure transducers to accurately measure evaporation and condensation pressures, high-capacity drier filter to prevent throttling valve blockages and eliminate any moisture present in the circuit, and liquid sight glass for checking the refrigerant charge. In heat pump versions, a 4-way cycle-reversing valve and an outdoor air temperature sensor are also provided.

**Compressors:** scroll type, specifically designed to operate with R410A, mounted on rubber anti-vibration mounts. The crankcase heater, where present, is activated when the compressor is stopped and is disabled when the compressor restarts.

**Air-side heat exchangers:** for chillers it is made entirely of aluminum using the new microchannel technology, which makes it possible to reduce significantly both the air-side pressure drops and the refrigerant charge, while at the same time ensuring a higher heat exchange capacity for the same frontal surface compared with traditional heat exchangers. In the

heat pump versions, the heat exchanger is a finned coil with fin spacing optimized for operation at low temperatures.

**Fan:** axial type with airfoil-profile blades. Supplied complete with protective grille and inlet/outlet nozzles with double flared profile, specially shaped to increase efficiency and reduce noise.

**User-side heat exchangers:** brazed-plate type, made of AISI 316 stainless steel and factory-insulated with closed-cell material; they can be equipped with an electric antifreeze heater. Each evaporator is protected by a temperature probe used as an antifreeze protection sensor that activates the circulator (if present), even when the unit is switched off, if the conditions set on the controller occur.

**Control system:** all units are equipped with a microprocessor-based control board with superheat control logic managed according to the signals sent by the pressure transducers and temperature probes. The CPU also controls the following functions: water temperature regulation, antifreeze protection, compressor timing and start-up, management of fan and circulation pumps (if present), alarm reset, alarm indication and operating status LEDs. On request, the microprocessor can be connected to remote BMS control systems. With the addition of the expansion module, it is possible to control an external 3-way valve, either modulating or 2-position, via the controller.

### Operating Areas

Hot

Cold

## Factory-installed

- **KA** - Anti-freeze heater on: heat exchanger and base. Electric heater installed on the front side of the plate heat exchanger, which is activated when the water temperature inside the exchanger falls below +4°C. A heating cable is installed on the base to melt any ice that may form. (HWA1-A/H).
- **KA1** - Anti-freeze heater on heat exchanger. Electric heater installed on the front face of the plate heat exchanger, which is activated when the water temperature inside the exchanger falls below +4°C. (HWA1-A).
- **DSFR** - Three-phase relay for overvoltage and undervoltage monitoring + phase loss/sequence. Indicates the presence of all three phases in the correct sequence and whether all three line-to-line voltages are within the set limits. It is possible to set the overvoltage and undervoltage thresholds separately.
- **SL \*\*** - Silenced version. The silenced unit (equipped with the SL accessory) features an innovative thermo-acoustic jacket on the compressors. This insulation allows a noise reduction of up to 10% at certain compressor rotation frequencies. The special multi-layer structure provides thermal insulation that, at low temperatures, reduces losses by up to 2% compared to standard insulation.
- **SSL \*\*** - Super silenced version. The super silenced unit (equipped with the SSL accessory) includes, in addition to the thermo-acoustic jacket on the compressors, a special fan with diffuser. This component increases the fan efficiency, allowing its speed to be reduced, thereby lowering sound pressure and energy consumption. In this way it is possible to save significant amounts of electrical energy for each fan.
- **C \*\*** - Ductable version. With the ductable version, the diffuser is used to take advantage of the higher available pressure of the fan and, if required, to duct the air discharge.
- **C(S) \*\*** - Ductable version with jackets. In addition to the ductable version, thermo-acoustic jackets are installed on the compressors.
- **EC** - Modulating EC fan (standard for size 0285 cooling only, size 0273–0285 heat pump). Includes the CC function, condensation control down to -15°C. Mandatory accessory for cooling-only versions, comfort applications, EU market.
- **PS** - Fixed-speed AC circulation pump.
- **CM** - BMS connectivity setup - ModBus protocol included - accessory that enables the connection of the unit to external controllers via serial cable with RS-485 electrical standard and ModBus RTU protocol.
- **GI** - Hardware expansion module. Additional expansion board installed at the factory that increases the resources (I/O) available in the system.
- **TR1** - Microchannel coil with Aero surface treatment. The treatment consists of spraying a special water-based coating made of new resins with very high chemical resistance. The product is flexible to withstand thermal contractions and expansions, UV-resistant, dirt-repellent, mechanically resistant, with very limited heat transfer losses and practically no effect on air-side pressure drops. The treatment withstands 6000 h according to ASTM B117. (HWA1-A).
- **TR2** - Coil anti-corrosion treatment - thanks to this treatment, the coil becomes flexible to withstand thermal contractions and expansions, mechanically resistant, UV-protected and dirt-repellent. Heat transfer losses are very limited. The treatment ensures coil protection under virtually all environmental conditions: from coastal to rural areas, from industrial to urban zones. The treatment withstands 6,000 hours according to ASTM B117. (HWA1-A/H).
- **IM** - Circuit breakers on compressors and fans - overcurrent switches applied to compressors and fans, protecting the components from faults caused by possible current spikes.

## Provided separately

- **SAS** - Remote system probe. The remote system probe controls the heat pump temperature only during the compressor start-up phase; shutdown is managed by the probe installed on the heat pump flow line.
- **AG** - Rubber anti-vibration kit - designed to prevent vibration transmission to the structure; they are to be installed beneath the unit, in the designated mounting holes.
- **FY** - Y-strainer - contains a stainless steel mesh screen (500 µm filtration) that collects solid materials present in the water. Filtration prevents blockage and/or damage to the devices installed downstream of the strainer. Alternatively, it is possible to install a dirt separator that ensures a filtration level not greater than 1 mm (in this case, it is no longer necessary to install the Y-strainer).
- **i-CR2\*\*** - Wall-mounted remote control - Modbus remote

controller with negative LCD and capacitive keys. The device is intended to be used as a remote unit keypad with local temperature sensing and replicates the functions of the on-board unit controller.

- **Hi-TV415\*\*** - Color touch screen wired remote controller for the centralized management of a cascade of chillers/heat pumps, for up to 7 units.

**i-CR2**  
Wall-mounted  
remote control  
**ACCESSORY**

**Hi-TV415**  
Touch screen remote

(1) Cooling: outdoor air temperature 35°C; inlet/outlet water temperature 12/7°C.

(2) Cooling: outdoor air temperature 35°C; inlet/outlet water temperature 23/18°C.

(3) Reference water temperature for internal heat exchanger = 12/7°C.

(4) Data is indicative and subject to change. For the correct value, always refer to the technical label on the unit.

(5) The calculated value of minimum system water volume does not take into account the water volume contained in the internal heat exchanger (evaporator). For applications with low outdoor air temperature or low required average loads, the minimum system water volume is obtained by doubling the indicated value.

(6) Condition (3); value determined on the basis of measurements carried out in accordance with UNI

EN ISO 9614-2, in compliance with the requirements of Eurovent certification.

(7) Value calculated from the sound power level using ISO 3744:2010, referenced to a distance of 10 m from the unit.

(8) Cooling BT version: outdoor air temperature 35°C, internal heat exchanger water temperature = -3/-8°C. Fluid treated with 35% ethylene glycol.

The performance data shown are indicative and may be subject to change. The capacities declared at points (1), (2), (8) are to be understood as referring to the instantaneous output in accordance with EN 14511. The data declared at point (3) are determined in accordance with UNI EN 14825.

(1) Cooling: outdoor air temperature 35°C; inlet/outlet water temperature 12/7°C.

(2) Cooling: outdoor air temperature 35°C; inlet/outlet water temperature 23/18°C.

(3) Heating: outdoor air temperature 7°C d.b. 6°C w.b.; water inlet/outlet temp. 30/35°C.

(4) Heating: outdoor air temperature 7°C d.b. 6°C w.b.; water inlet/outlet temp. 40/45°C.

(5) Cooling: water inlet/outlet temperature 12/7°C

(6) Heating: average climatic conditions; Tbiv = -7°C; water temp. in/out 30/35°C

(7) Indicative data, subject to change. For the correct data, always refer to the technical nameplate on the unit.

(8) The calculated value of minimum system water volume does not take into account the water volume contained in the internal heat exchanger (evaporator). For applications with low outdoor air temperatures or low required average loads, the minimum system water volume is obtained by doubling the indicated value.

(9) Condition (3); value determined on the basis of measurements carried out in accordance with standard UNI EN ISO 9614-2, in compliance with the requirements of Eurovent certification.

(10) Value calculated from the sound power level using ISO 3744:2010, referred to a distance of 10 m from the unit.

N.B. The stated performance data are indicative and may be subject to change. The capacities declared in points (1), (2), (3) and (4) are to be understood as referring to the instantaneous power according to EN 14511. The data declared in points (5) and (6) are determined in accordance with UNI EN 14825.

Range of Eurovent-  
certified products

## Air-cooled water chiller with axial fans

106 kW÷349 kW

The water chillers have been designed for commercial and industrial applications; they are very compact yet equipped with large-surface air-side heat exchangers. They therefore ensure high efficiency, with EER values among the highest in their category. The use of high-efficiency, particularly robust scroll compressors, together with the patented oil recovery and distribution system used on tandem circuits, guarantees high reliability and consistent performance. Available in 12 sizes.

**Casing:** All units in the series feature a structure suitable for outdoor installation, made of hot-dip galvanized steel sheet coated with polyester powder paint in RAL 7035 / RAL 3020 (only for some components) to ensure optimal resistance to atmospheric agents. All screws and inserts are made of galvanized steel.

**Compressors:** of the scroll type, expressly designed to operate with R410A, mounted on rubber anti-vibration supports. The crankcase heater, which is always present, is activated when the compressor is stopped and is disabled when it restarts.

**Air-side heat exchangers:** entirely made of aluminum using microchannel technology, which significantly reduces both air-side pressure drops and refrigerant charge, while at the same time ensuring higher heat transfer capacity for the same frontal surface area compared to traditional heat exchangers.

**User-side heat exchangers:** of the brazed plate type and made of AISI 304 stainless steel for single-circuit units and AISI 316 for dual-circuit units, factory-insulated with closed-cell material, and can be equipped with an electric antifreeze heater (optional accessory KA). A differential pressure switch, installed on the water side, ensures the presence of water flow, preventing ice formation inside.

**Fans:** axial type with airfoil blades. They are statically and dynamically balanced and supplied complete with protective guard and inlet/outlet nozzles with double flared profile, specially shaped to increase efficiency and reduce noise. The motor has an IP54 protection rating according to CEI EN 60529. The electric motor used is modulation-controlled, with a directly coupled EC brushless motor and equipped with integrated thermal protection.

**Refrigeration circuit:** manufactured using components from leading international companies and in accordance with UNI EN 13134. The refrigerant gas is R410A. In its basic version, the refrigeration circuit includes: electronic expansion valve, service valves for maintenance and inspection, safety device compliant with current regulations (high- and low-pressure switch), refrigerant safety valve, pressure transducers for accurate measurement of evaporation and condensation pressures, cartridge-type dehydrator filter, liquid sight glass for checking the refrigerant charge, solenoid valve, and shut-off valves.

**Electrical panel:** fully manufactured and wired in compliance with standard EN 60204, comprising a power section and a control section. The degree of protection of the electrical panel is IP54. The electrical

panel is equipped with a terminal block with volt-free contacts for remote ON-OFF.

**Control system:** all units are equipped with a microprocessor-based control board featuring a superheat control logic managed according to the signals sent by the pressure transducers and temperature probes. The CPU also controls the following functions: water temperature regulation, antifreeze protection, compressor start-up and timing, fan and circulation pump management (where present), alarm reset, alarm indication, and operation status LEDs.

**Control and protection devices:** all units are equipped with the following control and protection devices: phase monitor complete with minimum and maximum voltage relay, which stops the unit if the phase sequence is incorrect or the voltage of at least one phase differs by more than 15% from the others; flow water temperature sensor (with antifreeze function); return water temperature sensor (both installed inside the heat exchanger); low-pressure transducer; high-pressure transducer; discharge temperature sensor on the compressors; safety valve on both the low- and high-pressure sides; suction temperature sensor on the compressors; outdoor air temperature sensor; fan thermal protection; thermal protection on each compressor; water-side differential pressure switch protecting the evaporator; manual reset high-pressure switch installed on the compressor discharge line.

**Hydraulic circuit:** the chillers can be supplied with an integrated hydronic module which, in addition to differential pressure switches, includes a single or twin pump (one serving as backup for the other) with AC motor, suitable for chilled water operation and directly managed by the on-board unit control. It is also possible to install an internal buffer tank with external insulation made of closed-cell expanded material, with capacity sized to prevent excessive compressor start-stop cycles.

## Operating Areas

## Accessories

### Factory-installed

- KA1\* – Antifreeze heater for heat exchanger and pump (if present) – electric heating element installed on the front face of the plate heat exchanger, which is activated when the water temperature inside the exchanger falls below +4°C, and electric heating element that protects the pump motor at low temperatures.
- KA2\* – Antifreeze protection for heat exchanger, pump and tank (if present) – includes KA1 – in addition to accessory KA1, an immersion heater is added in the tank. The kit consists of: an armored electric heater in AISI 321, a programmable digital temperature controller and a contactor.
- SL\*\* – Silenced version. The silenced unit (equipped with the SL accessory) features an innovative thermo-acoustic jacket on the compressors. This insulation allows a noise reduction of up to 10% at certain compressor rotational frequencies. The special multilayer structure provides thermal insulation that, at very low temperatures, reduces losses by up to 2% compared to standard insulation.
- SSL\*\* – Super-silenced version. The super-silenced unit (equipped with the SSL accessory) includes, in addition to the thermo-acoustic enclosure on the compressors, a special diffuser mounted on the fan. This diffuser increases the fan's efficiency, allowing its speed to be reduced, thereby lowering sound pressure level and energy consumption. In this way, substantial electrical energy savings can be achieved for each fan.
- C\*\* – Ductable version. With the ductable version, the diffuser is used to take advantage of the higher available pressure of the fan and, if required, to duct the air discharge.
- C(S)\*\* – Ductable version with jackets. In addition to the ductable version, thermo-acoustic jackets are installed on the compressors.

- PS\*\*\* – Reversible heat pump, heating-only version with standard head.
- PSAP\*\*\* – Reversible heat pump, high head pump-only version.
- PD\*\*\* – Reversible heat pump, dual-pump version with standard head.
- PDAP\*\*\* – Reversible heat pump, dual high-head pump version.
- PS-SI\*\*\* – Reversible heat pump, standard head pump version + tank
- PSAP-SI\*\*\* – Reversible heat pump, high-head pump version with storage tank.
- PD-SI\*\*\* – Reversible heat pump, dual-pump version with standard head + storage tank.
- PDAP-SI\*\*\* – Reversible heat pump with dual high-head pump configuration and storage tank.
- TE1 – Special mechanical seal for glycol content above 40% – for water-glycol mixtures with a glycol mass fraction greater than 40% and up to 50%, a different mechanical seal is used to ensure the correct operation of the electric pump.
- TR1 – Microchannel coil with Aero surface treatment. The treatment consists of spraying a special water-based coating, formulated with new resins offering extremely high chemical resistance. The product is flexible to withstand thermal contractions and expansions, UV-resistant, dirt-repellent, mechanically resistant, with very limited reduction in heat transfer and virtually no impact on air-side pressure drops. The treatment withstands 6,000 h according to ASTM B117.
- DS – The desuperheater includes the addition of a brazed plate heat exchanger made of AISI 316 stainless steel, factory-insulated using closed-cell material.
- BT – The BT accessory allows the operating range of the water

\*\*\* Accessories not usable simultaneously

\*\*\*\* Accessories not usable simultaneously

## Accessories

temperature to be extended down to  $-8^{\circ}\text{C}$ . In this case, it is necessary to use a water-glycol mixture.

- **EC** - Modulating EC fan. Includes CC function, condensing pressure control down to  $-20^{\circ}\text{C}$ . Mandatory accessory for cooling-only versions, comfort applications, EU market.
- **CC** - Condensation control down to  $-20^{\circ}\text{C}$ . Includes the EC accessory.
- **CT** - Condensation control down to  $-10^{\circ}\text{C}$ .
- **GR1** - Anti-intrusion kit for the refrigerant circuit compartment – fitted on the refrigerant circuit compartment to prevent foreign objects from entering the structure.
- **GR2** - Battery compartment anti-intrusion kit – wire mesh to prevent the entry of foreign objects into the coil and to protect the coil from accidental contact by people or objects.
- **GR3** - Anti-intrusion kit for the refrigeration circuit compartment and anti-intrusion kit for the battery compartment.
- **IM** - Circuit breakers on compressors and fans – overcurrent switches applied to compressors and fans, protecting the components from faults caused by possible current spikes.
- **SS** - Soft starter – electronic static starter for inrush current management, installed inside the electrical panel; it allows a

reduction of inrush current and of mechanical wear on the motor windings.

- **LQ** – Internal switchboard lights – light for illuminating the interior of the electrical panel, facilitating maintenance for the operator.
- **SH** - Schuko socket (with MCB) – convenience socket located in the electrical panel (maximum 16 A), protected against overloads and short circuits by a miniature circuit breaker.
- **RFM** - Discharge and suction service valve on compressors – shut-off valve installed on the compressor suction and discharge lines, which simplifies maintenance by preventing the need to recover the refrigerant from the entire unit.
- **2SFV** - Changeover valve with double safety valve – the changeover valve allows alternating use of two safety valves, facilitating periodic inspection or replacement while ensuring system operation and maintaining the safety system.
- **KS** - Lifting bracket kit – facilitates lifting and positioning of the unit.
- **CM** - BMS connectivity setup – ModBus protocol included – accessory that enables the connection of the unit to external controllers via serial cable with RS-485 electrical standard and ModBus RTU protocol.

### Provided separately

- **AG** - Rubber anti-vibration kit – designed to prevent vibration transmission to the structure; they are to be installed beneath the unit, in the designated mounting holes.
- **AM** - Spring anti-vibration kit – designed to prevent transmission of vibrations to the structure; they must be installed underneath the unit, in the designated holes.
- **FY** - Y-strainer – contains a stainless steel mesh screen (500  $\mu\text{m}$  filtration) that collects solid materials present in the water. Filtration prevents blockage and/or damage to the devices installed downstream of the strainer. Alternatively, it is possible to install a dirt separator that ensures a filtration level not greater than 1 mm (in this case, it is no longer necessary to install the Y-strainer).
- **SAS** - Remote system probe.
- **RV** - Grooved connection joint. To facilitate installation, a carbon steel pipe nipple can be supplied, featuring on one end a grooved connection compatible with the one on the unit and complete with the appropriate coupling for the connection, and on the other end a G 1" 1/2 M threaded connection. The kit consists of 2 nipples and 2 grooved connections to connect the nipples to the unit.
- **ISK\*\*** - USB/RS485 serial converter – interface device capable of reading and writing control registers via the RS485 standard and converting them to a USB port that can be connected to any supervision system.
- **LNC\*\*** - LAN-Wi-Fi router – device that allows the unit to be connected to a local network via Ethernet cable or Wi-Fi

coverage for remote monitoring.

- **OVPN\*\*** - 3G LAN-Wi-Fi router with VPN tunnel – device that allows the unit to be connected remotely with an industrial router using the secure OPENVPN service.
- **i-CR2\*\*** - Wall-mounted remote control – Modbus remote controller with negative LCD and capacitive keys. The device is intended to be used as a remote unit keypad with local temperature sensing and replicates the functions of the on-board unit controller.
- **Hi-TV415\*\*** - Color touch screen wired remote controller for the centralized management of a cascade of chillers/heat pumps, for up to 7 units.

**i-CR2**  
Wall-mounted  
remote control  
**ACCESSORY**

**Hi-TV415**  
Touch screen remote  
controller for cascade  
management (max 7 units)  
**ACCESSORY**

(1) Cooling: outdoor air temperature 35°C; inlet/outlet water temperature 12/7°C.

(2) Cooling: outdoor air temperature 35°C; inlet/outlet water temperature 23/18°C.

(3) Cooling: inlet/outlet water temperature 7/12°C.

(4) Data is indicative and subject to change. For the correct value, always refer to the technical label on the unit.

(5) The indicated volume refers to the total required amount; the designer must meet this requirement by taking into account the quantity already contained within the unit, depending on the selected hydronic kit (please refer to the technical data sheet to check this value).

(6) Condition (1); value determined on the basis of measurements carried out in accordance with UNI EN ISO 9614-1.

(7) Value calculated from the sound power level using ISO 3744:2010, referenced to a distance of 10 m from the unit.

(8) Cooling BT version: outdoor air temperature 35°C, internal heat exchanger water temperature = -3/-8°C. Fluid treated with 35% ethylene glycol.

(9) Calculated according to AHRI 551/591 (SI) standard.

The stated performance data are indicative and may be subject to change. Furthermore, the capacities declared at points (1), (2), (8) refer to the instantaneous power in accordance with UNI EN 14511. The value declared at point (3) is determined in accordance with UNI EN 14825.

## Air/water heat pumps with axial fans

109 kW÷345 kW

The air-to-water heat pumps have been designed for commercial and industrial applications; they are very compact yet equipped with large-surface air-side heat exchangers. As a result, they ensure high efficiency, with COP values among the highest in their category. The use of high-efficiency, particularly robust scroll compressors, together with the patented oil recovery and distribution system used on tandem circuits, guarantees high reliability and consistent performance.

Available in 12 sizes.

**Casing:** All units in the series feature a structure suitable for outdoor installation, made of hot-dip galvanized steel sheet coated with polyester powder paint in RAL 7035 / RAL 3020 (only for some components) to ensure optimal resistance to atmospheric agents. All screws and inserts are made of galvanized steel.

**Compressors:** scroll type, specifically designed to operate with R410A, mounted on rubber anti-vibration supports. The crankcase heater, which is always present, is activated when the compressor is stopped and is disabled when it restarts.

**Air-side heat exchangers:** finned-coil type, made with copper tubes and aluminum fins with corrugated surface, suitably spaced to ensure maximum heat exchange efficiency.

**User-side heat exchangers:** of the brazed plate type and made of AISI 304 stainless steel for single-circuit units and AISI 316 for dual-circuit units, factory-insulated with closed-cell material, and can be equipped with an electric antifreeze heater (optional accessory KA). A differential pressure switch, installed on the water side, ensures the presence of water flow, preventing ice formation inside.

**Fans:** axial type with airfoil profile blades. They are statically and dynamically balanced and supplied complete with protective grille and inlet and outlet nozzles with double flared profile, specially shaped to increase efficiency and reduce noise. The motor has an IP54 protection rating in accordance with CEI EN 60529. Regulation is performed by means of voltage variators, directly controlled by the onboard unit control; this solution is particularly suitable when operation with outdoor air temperatures below -10 °C is required and is available on request for all models. As an accessory, EC fans are available, allowing the operating range to be further extended.

**Refrigerant circuit:** it is built using components supplied by leading international manufacturers and in compliance with UNI EN 13134. The refrigerant gas is R410A. In its basic configuration, the refrigerant circuit includes: electronic expansion valve, service valves for maintenance and inspection, safety device compliant with current regulations (high- and low-pressure switch), safety valve for the refrigerant, pressure transducers to accurately measure evaporation and condensation pressures, high-capacity replaceable core filter drier to prevent expansion valve blockage and remove any moisture present in the circuit, liquid sight glass for refrigerant charge monitoring, solenoid valve and shut-off valves.

In heat pump versions, the following are also included: 4-way reversing valve, liquid separator, liquid receiver, and outdoor air temperature

probe.

**Electrical panel:** fully manufactured and wired in compliance with standard EN 60204, comprising a power section and a control section. The degree of protection of the electrical panel is IP54. The electrical panel is equipped with a terminal block with volt-free contacts for remote ON-OFF.

**Control system:** all units are equipped with a microprocessor-based control board with superheat control logic managed according to the signals sent by the pressure transducers and temperature probes. The CPU also controls the following functions: water temperature regulation, antifreeze protection, compressor start-up and timing, fan and circulation pump management (where present), alarm reset, alarm signalling and operation LEDs. On request, the microprocessor can be connected to remote BMS control systems.

**Control and protection devices:** all units are equipped with the following control and protection devices: phase monitor complete with minimum and maximum voltage relay, which stops the unit if the phase sequence is incorrect or the voltage of at least one phase differs by more than 15% from the others; flow water temperature sensor (with antifreeze function); return water temperature sensor (both installed inside the heat exchanger); low-pressure transducer; high-pressure transducer; discharge temperature sensor on the compressors; safety valve on both the low- and high-pressure sides; suction temperature sensor on the compressors; outdoor air temperature sensor; fan thermal protection; thermal protection on each compressor; water-side differential pressure switch protecting the evaporator; manual reset high-pressure switch installed on the compressor discharge line.

**Hydraulic circuit:** the heat pumps in the series can be supplied with an integrated hydraulic module, which includes, in addition to differential pressure switches, a single or twin pump (one serving as a backup for the other) with AC motor, suitable for chilled water operation and directly managed by the unit's onboard controller. It is also possible to install an internal buffer storage tank, externally insulated with closed-cell foam material and sized with an adequate capacity to prevent excessive compressor start-stop cycles.

## Operating Areas

Tw: water temperature - Ta: outdoor air temperature  
A1 = HWA1-A/H heating

A1 = HWAI-A/H cooling partial load  
 A2 = HWAI-A/H cooling  
 A3 = HWAI-A/H cooling with CC accessory for condensation control down to -20°C  
 A4 = HWAI-A/H BT partial load  
 A5 = HWAI-A/H BT

## Accessories

### Factory-installed

- **KA1\*** – Antifreeze heater for heat exchanger and pump (if present) – electric heating element installed on the front face of the plate heat exchanger, which is activated when the water temperature inside the exchanger falls below +4°C, and electric heating element that protects the pump motor at low temperatures.
- **KA2 \*** – Antifreeze protection for heat exchanger, pump and tank (if present) – includes KA1 – in addition to accessory KA1, an immersion heater is added in the tank. The kit consists of: an armored electric heater in AISI 321, a programmable digital temperature controller and a contactor.
- **SL \*\*** – Silenced version. The silenced unit (equipped with the SL accessory) features an innovative thermo-acoustic jacket on the compressors. This insulation allows a noise reduction of up to 10% at certain compressor rotational frequencies. The special multilayer structure provides thermal insulation that, at very low temperatures, reduces losses by up to 2% compared to standard insulation.
- **SSL \*\*** – Super-silenced version. The super-silenced unit (equipped with the SSL accessory) includes, in addition to the thermo-acoustic enclosure on the compressors, a special diffuser mounted on the fan. This diffuser increases the fan's efficiency, allowing its speed to be reduced, thereby lowering sound pressure level and energy consumption. In this way, substantial electrical energy savings can be achieved for each

- fan.
- **C \*\*** – Ductable version. With the ductable version, the diffuser is used to take advantage of the higher available pressure of the fan and, if required, to duct the air discharge.
- **C(S) \*\*** – Ductable version with jackets. In addition to the ductable version, thermo-acoustic jackets are installed on the compressors.
- **PS \*\*\*** – Reversible heat pump, heating-only version with standard head.
- **PSAP \*\*\*** – Reversible heat pump, high-head pump only version.
- **PD \*\*\*** – Reversible heat pump, dual-pump version with standard head.
- **PDAP \*\*\*** – Reversible heat pump, dual high-head pump version.
- **PS-SI \*\*\*** – Reversible heat pump with standard head pump version + tank.
- **PSAP-SI \*\*\*** – Reversible heat pump, high-head pump version with storage tank.
- **PD-SI \*\*\*** – Reversible heat pump, dual-pump version with standard head + storage tank.
- **PDAP-SI \*\*\*** – Reversible-cycle heat pump, high-head twin pump version with buffer tank.
- **TE1** – Special mechanical seal for glycol content above 40%

\*\*\*\* Accessories not usable simultaneously

## Accessories

- for water-glycol mixtures with a glycol mass fraction greater than 40% and up to 50%, a different mechanical seal is used to ensure the correct operation of the electric pump.
- **TR2** - Coil anti-corrosion treatment – thanks to this treatment, the coil becomes flexible to withstand thermal contractions and expansions, mechanically resistant, UV-protected and dirt-repellent. Heat transfer losses are very limited. The treatment ensures coil protection under virtually all environmental conditions: from coastal to rural areas, from industrial to urban zones. The treatment withstands 6,000 hours according to ASTM B117. (HWA1-A/H).
- **DS** - The desuperheater includes the addition of a brazed plate heat exchanger made of AISI 316 stainless steel, factory-insulated using closed-cell material.
- **BT** - The BT accessory allows the operating range of the water temperature to be extended down to -8°C. In this case, it is necessary to use a water-glycol mixture.
- **EC** - Modulating EC fan. Includes CC function, condensing pressure control down to -20°C. Mandatory accessory for cooling-only versions, comfort applications, EU market.
- **CC** - Condensation control down to -20°C. Includes the EC accessory.
- **CT** - Condensation control down to -10°C.
- **GR1** - Anti-intrusion kit for refrigeration circuit compartment – installed on the refrigeration circuit compartment to prevent the ingress of foreign objects into the unit.
- **GR2** - Battery compartment anti-intrusion kit – wire mesh to prevent the entry of foreign objects into the coil and to protect the coil from accidental contact by people or objects.
- **GR3** - Anti-intrusion kit for the refrigeration circuit compartment and anti-intrusion kit for the battery

- compartment.
- **IM** - Circuit breakers on compressors and fans – overcurrent switches applied to compressors and fans, protecting the components from faults caused by possible current spikes.
- **SS** - Soft starter – electronic static starter for inrush current management, installed inside the electrical panel; it allows a reduction of inrush current and of mechanical wear on the motor windings.
- **LQ** - Internal switchboard lights – light for illuminating the interior of the electrical panel, facilitating maintenance for the operator.
- **SH** - Schuko socket (with MCB) – convenience socket located in the electrical panel (maximum 16 A), protected against overloads and short circuits by a miniature circuit breaker.
- **RFM** - Discharge and suction service valve on compressors – shut-off valve installed on the compressor suction and discharge lines, which simplifies maintenance by preventing the need to recover the refrigerant from the entire unit.
- **2SFV** - Changeover valve with double safety valve – the changeover valve allows alternating use of two safety valves, facilitating periodic inspection or replacement while ensuring system operation and maintaining the safety system.
- **KS** - Lifting bracket kit – facilitates lifting and positioning of the unit.
- **CM** - BMS connectivity setup – ModBus protocol included – accessory that enables the connection of the unit to external controllers via serial cable with RS-485 electrical standard and ModBus RTU protocol.
- **ACK6** - Summer/Winter status signaling – auxiliary contactors providing a volt-free contact, allowing remote indication of the operating mode (summer/winter).

### Provided separately

- **AG** - Rubber anti-vibration kit – designed to prevent vibration transmission to the structure; they are to be installed beneath the unit, in the designated mounting holes.
- **AM** - Spring anti-vibration kit – designed to prevent transmission of vibrations to the structure; they must be installed underneath the unit, in the designated holes.
- **FY** - Y-strainer – contains a stainless steel mesh screen (500 µm filtration) that collects solid materials present in the water. Filtration prevents blockage and/or damage to the devices installed downstream of the strainer. Alternatively, it is possible to install a dirt separator that ensures a filtration level not greater than 1 mm (in this case, it is no longer necessary to install the Y-strainer).
- **SAS** - Remote system probe.
- **RV** - Grooved connection joint. To facilitate installation, a carbon steel pipe nipple can be supplied, featuring on one end a grooved connection compatible with the one on the unit and complete with the appropriate coupling for the connection, and on the other end a G 1" 1/2 M threaded connection. The kit consists of 2 nipples and 2 grooved connections to connect the nipples to the unit.
- **ISK\*\*** - USB/RS485 serial converter – interface device capable of reading and writing control registers via the RS485 standard and converting them to a USB port that can be connected to any supervision system.
- **LNC\*\*** - LAN-Wi-Fi router – device that allows the unit to

- be connected to a local network via Ethernet cable or Wi-Fi coverage for remote monitoring.
- **OVPN\*\*** - 3G LAN-Wi-Fi router with VPN tunnel – device that allows the unit to be connected remotely with an industrial router using the secure OPENVPN service.
- **i-CR2\*\*** - Wall-mounted remote control – Modbus remote controller with negative LCD and capacitive keys. The device is intended to be used as a remote unit keypad with local temperature sensing and replicates the functions of the on-board unit controller.
- **Hi-TV415\*\*** - Color touch screen wired remote controller for the centralized management of a cascade of chillers/heat pumps, for up to 7 units.

(1) Cooling: outdoor air temperature 35°C; inlet/outlet water temperature 12/7°C.  
 (2) Cooling: outdoor air temperature 35°C; entering/leaving water temperature 23/18°C.  
 (3) Heating: outdoor air temperature 7°C d.b. 6°C w.b.; water inlet/outlet temp. 30/35°C.  
 (4) Heating: outdoor air temperature 7°C d.b. 6°C w.b.; water inlet/outlet temp. 40/45°C.  
 (5) Cooling: water inlet/outlet temperature 7/12°C.  
 (6) Heating: average climatic conditions; T<sub>biv</sub> = -7°C; inlet/outlet water temperature 30/35°C.  
 (7) Indicative data, subject to change. For the correct data, always refer to the technical nameplate on the unit.  
 (8) The indicated volume refers to the total required amount; the designer must meet this

requirement by taking into account the quantity already present inside the unit, depending on the selected hydronic kit (please check this value in the technical data sheet).  
 (9) Condition (1); value determined on the basis of measurements carried out in accordance with UNI EN ISO 9614-1.  
 (10) Value calculated from the sound power level using ISO 3744:2010, referred to a distance of 10 m from the unit.  
 (11) Cooling BT version: outdoor air temperature 35°C, internal heat exchanger water temperature = -3/-8°C. Fluid treated with 35% ethylene glycol.

**Simplicity, comfort, and complete control at your fingertips with the My Maxa app.**

**The My Maxa app allows remote management of MAXA heat pumps connected via the e-Pro controller.**

Through the My Maxa APP, one or more MAXA heat pump installations can be associated with your user profile, thereby granting you full remote control. The main operations that can be performed using the My Maxa APP are:

- switching the heat pump on and off
- the adjustment of the operating temperature of the heat pump in the different operating modes (heating, cooling, and domestic hot water)
- the transition from manual to programmed operation
- the display of the main operating data of the heat pump
- the weekly time scheduling of the main functions of the heat pump
- the visualization of energy data through time-based charts
- changing the desired room temperature (only with room thermostat function enabled)
- the display of the room temperature (only with the room thermostat function enabled).

#### Multi-system management

The app is designed to simplify the management of multiple heat pumps associated with the same user profile. A single interface provides a comprehensive overview of all installed systems.

#### Room temperature control

In **room thermostat** mode, the app allows you to change the set temperature at any time, ensuring precise and immediate control. This function makes it possible to rapidly adapt the system to the users' varying needs.

#### Immediate monitoring

The **control mode** displays the main operating parameters: the domestic hot water temperature, the current flow temperature, and the outdoor temperature. A single glance provides an overview of the entire situation.

### Change of operating mode

From the dedicated section, it is possible to change the heat pump's **operating mode**. This option simplifies seasonal changeover management and allows the heat pump to be adapted to the current needs of the system.

### Preset setpoints

Each operating mode allows you to set two customized temperature values, "ECO" and "COMFORT." This function is particularly useful for programming different usage scenarios, helping to reduce energy consumption without sacrificing comfort.

### Water temperature control

Water temperature management is made immediate thanks to a dedicated slider. The setting is intuitive and, at the same time, precise.

### Chrono-programming

It is possible to schedule both the desired room temperature and the water temperature in the different operating modes.

### Real-time energy data

The energy data of the heat pump are always available and presented in a clear and straightforward manner.

### Historical analysis

Through dedicated charts, it is possible to view the history of energy data—an advanced tool for monitoring system efficiency and optimizing its performance.

# e-Pro

## Wired Remote control, Wi-Fi connected

e-Pro is the new smart remote controller by Maxa, designed to provide advanced and intuitive control of heat pumps in residential and commercial applications.

Thanks to 2.4 GHz Wi-Fi connectivity and integration with the My Maxa app, it is possible to manage heating, cooling and domestic hot water production functions simply and efficiently, even remotely, directly from a smartphone. Equipped with a 4" color graphic LCD display with touch-screen technology, e-Pro combines elegant design with a modern, intuitive interface designed for wall installation.

The user can quickly access all operating settings through dedicated pages, such as heat pump control or the room chronothermostat, ensuring a comprehensive and immediate user experience.

e-Pro also incorporates advanced energy efficiency functions, such as automatic room temperature control and dynamic adjustment of the supply temperature based on outdoor conditions.

The result is an intelligent management system that optimizes energy consumption, enhances comfort, and ensures maximum efficiency in every season.

e-Pro is compatible with Maxa heat pumps from the i-290 (0106-0127), i-32V5, i-32V5SL, Atria, and i-32V5 Midi ranges.

### Main functions

- Temperature control for heating, cooling and domestic hot water production
- Real-time diagnostics and data visualization
- Setting and management of setpoints
- Daily and weekly scheduling for cooling, heating, domestic hot water production, and room temperature
- Selection of climatic curves for cooling and heating
- The main European languages are supported

### Integrated Energy Efficiency

The advanced energy management system automatically reduces the screen brightness when not in use and adjusts the lighting to ambient conditions. e-Pro consumes less than 1W in standby, complying with the strictest CE certifications.

### Connectivity and Automation

Thanks to the built-in Wi-Fi module, the e-Pro can be connected to the

local Wi-Fi network, ensuring automatic updates and advanced services.

### Tailored Comfort

Equipped with an integrated thermostat and customizable modes, e-Pro maintains an ideal climate at all times thanks to daily, weekly, or holiday scheduling.

### Intuitive Use

The touch screen interface simulates the presence of backlit keys, providing an intuitive user experience. Dynamic icons offer immediate visual feedback on the status of the heat pump and on active functions, ensuring fast and easy navigation.

### Guaranteed Reliability

Each e-Pro undergoes rigorous quality testing with advanced diagnostic functions that ensure maximum long-term reliability. Firmware self-recovery and intelligent alert management ensure that the device is always ready for use.

### Price list

e-Pro	Wired Remote control, Wi-Fi connected	code	010022520010
		€	450

# e-Lite

## Multifunction touch screen wired control

e-LITE is a remote control with a touch-screen interface and capacitive color LCD display, designed for wall-mounted installation in indoor residential and commercial environments.

Compatible with MAXA heat pumps and water chillers, it uses Modbus communication to ensure simple and effective integration. In addition to serving as a remote control panel for the unit, it is equipped with a local sensor for temperature detection, thus ensuring precise and reliable comfort management.

e-LITE can be configured with a single machine and does not allow network management of multiple units, while still ensuring accurate, centralized control of system performance.

e-Lite is compatible with Maxa heat pumps from the i-290, i-32V5, i-32V5SL, Atria, i-32V5 Midi, and i-HPV5 ranges..

The e-Lite remote controller replicates all the functions available on board the MAXA unit, including:

- Switching on and off
- Setting the operating mode
- Setpoint configuration (heating, cooling, domestic hot water production)
- Real-time diagnostics and data visualization
- DHW production enablement
- Enable dual setpoint.
- Dynamic setpoint enablement
- Room thermostat
- 12 Vdc power supply included
- Micro SD slot for firmware updates

## Price list

e-Lite	Multifunction touch screen wired control	code	0110490101
		€	450

# Hi-TV415

## Multifunction touch screen wired control

Hi-TV415 is a touchscreen remote control designed to ensure efficient management of both single systems and complex systems consisting of multiple units in cascade. Thanks to its integrated temperature and humidity sensor, the device not only enables thermo-hygrometric monitoring of the environment, but also provides thermostat functionality with dual setpoint control, ideal for underfloor radiant systems equipped with dehumidification units.

Equipped with an intuitive color graphical interface enhanced by easily understandable synoptic diagrams, Hi-TV415 simplifies the use and configuration of all functions. It can be used as a remote panel for a single chiller or heat pump, as a room thermostat for zone management, or as a centralized control system for a network of chillers, heat pumps, and RFC systems.

The controller monitors and periodically polls the network, with a cycle time that varies according to the size of the fan coil and/or heat pump system. In multicircuit systems, the parameters and resources relating to the first circuit are displayed. Hi-TV415 therefore represents a complete, versatile and intuitive solution for advanced plant control.

## Price list

Hi-TV415	Multifunction touch screen wired control	code	0110490098
		€	640

# i-CR2

## Touch-screen wired control

Touchscreen remote control with negative LCD display and capacitive keys, designed for residential and commercial applications. Developed as a Modbus remote keypad, it allows management of a single unit by conveniently replicating all main on-board control functions, such as probe reading and parameter access, directly from the home or installation site.

Configurable exclusively with a single unit and not with machine networks, i-CR2 stands out for its ease of use, elegant design, and reliability, making it the ideal solution for the daily control of heat pumps or water chillers.

Other important functions are listed below:

- Dual setpoint.
- Weekly programmable room thermostat.
- Anti-legionella cycle.
- Alarm history.
- Room thermostat

### ON/OFF BACKLIGHT

Function operating at thermostat level; switches the LED and backlight on and off. When in OFF mode, the keypad does not accept commands. This function has no effect on unit control, but enables/disables interaction with the thermostat. It allows exiting the menu. If pressed for 3 seconds, it activates standby mode and locks the keypad (the padlock icon appears). This function has no effect on unit control, but enables/disables user interaction with the thermostat keypad.

### UP

Allows you to move to a higher-level menu or increase the value of a parameter

### DOWN

Allows you to move to a lower-level menu or to decrease the value of a parameter.

### CHRONOTHERMOSTAT

Allows you to set the operating ranges for thermostat control based on the room temperature measured by the sensor integrated in the i-CR2.

### SEASON CHANGE BUTTON

A prolonged 3-second press is required to change the operating mode (season) or to switch the heat pump or chiller to OFF.

### ENTER KEY

Allows entering the menus or confirming a parameter

# Connect Box

## Gateway Wireless

Connect Box is the ModBus-to-Wi-Fi converter that enables direct interfacing between MAXA heat pumps and the local network, allowing full management via the Maxa Connect application. Once connected to the home router, the device immediately links the heat pump to the MAXA cloud, providing simple and instant access to all operating information.

Connect Box is compatible with Maxa heat pumps from the i-290, i-32V5, i-32V5SL, i-32V5 Midi and i-HPV5 ranges.

### Intuitive user interface

User-friendly interface that enables users to easily monitor and manage their systems and installations.

### Diagnostics and monitoring

Advanced diagnostic tools enable real-time monitoring of system status, allowing rapid identification and remote resolution of issues. View and access a complete history of alarms/events.

### Safety

### Price list

Connect Box	Gateway Wireless	code	0110490103
		€	309

Through the **Maxa Connect** app, available both as a mobile application and as a Web App accessible from any browser, you can monitor key parameters in real time, such as system water temperatures, set operating modes, and check instantaneous power and the thermal energy produced. The intuitive interface ensures a comprehensive user experience that is accessible to everyone.

The ease of installation and seamless integration with the onboard electronics make Connect Box an ideal solution not only for residential applications, but also for commercial and tertiary settings, where it enables plant managers to directly and precisely control operating parameters.

Use of cutting-edge security technologies to protect data and ensure secure communication with service technicians.

### Remote configuration

The platform allows remote adjustment of system and installation settings, minimizing the need for a technician to be physically present on site. 24/7 access to installations. Management of schedules and modification of installation parameters.

### Start My Connect

Connect Box allows authorized service centers to interact with the heat pump through the dedicated professional app: Start My Connect.

The latter enables the pairing of the Connect Box with the user's heating system.

# Maxa Das

## Supervision, monitoring and analysis system

The MAXA DAS software was developed to meet the need for a complete, high-performance program for carrying out parameter configurations and testing on the production line.

It makes it possible to collect all information related to the unit's production, and allows the test engineer to analyze process data intuitively through a programmable graph.

In addition, it is designed to be used by after-sales office staff, service centers and installers as an analysis and monitoring tool for MAXA units during commissioning, maintenance, and in the event of operating faults.

**Compatible with i-290, i-32V5, i-32V5 MIDI, i-HPV5, i-MAX, HWA1-A, HWA1-A/H.**

### Maxa SCADA

It is the beating heart of the DAS system: a PC software application associated with a license—free of charge if linked to the purchase of a connection device—that acquires all data and parameter settings of the unit or system in real time and sends them to the graphical visualization system.

- Multi-connection system with local units or units integrated into a LAN/Wi-Fi network, also suitable for remote connections.
- Simple and intuitive tree-based selection of the model to be monitored.
- Forced unit status.
- Monitoring of system variables, with an alarm notification system via pop-up or email.
- Unit parameterization.
- Process logging.
- Event logging and data traffic debugging.
- Import of new models or updated revisions via quick library import.
- User access level management.
- Available in Italian and English
- Online help
- Multiple levels of user management.

### Maxa TREND

Useful for heat pumps and cooling-only units, it displays all ongoing processes through configurable, multi-level customizable graphs.

# Controls for hydronic terminals

## Airmust 3V A1 / 010 A1

Wi-Fi touch screen control / chronothermostat for wall installation

- 3.5" color LCD touch screen
- LCD resolution: 480x320 px
- Power supply 230V
- Maximum current (3V A1): 3A
- Thermostat function included
- Modbus
- 2.4G Wi-Fi connectivity
- APP available for Android and iOS: My House Pro
- 3-speed version (3V) or for 0-10 V motors (010)
- For 2-pipe and 4-pipe systems
- Window contact input
- Water probe inlet
- Automatic brightness
- Room temperature sensor
- Relative humidity sensor
- Operating mode management
- Mounting pitch with European standard
- Temperature and humidity measurement history
- Automatic changeover from cooling to heating mode
- Automatic management of daylight saving time / standard time changeover
- Multilingual
- Weekly schedule
- Weekly scheduling

## Air-Cooled Chiller

Three-speed wall-mounted thermostat

- Wall-mounted thermostat 230V
- Relay contacts 5A/230V
- 3-speed fan selector
- Off-On-Manual Selector
- Management of 2-pipe system with or without 230V on-off valves

## Airmust BMCP A1

Wi-Fi touch-screen controller for on-board installation on VSL fan coil units

- LCD display with five touch function keys
- Power supply 230V
- Maximum current: 5 A
- Thermostat function included
- Modbus
- 2.4G Wi-Fi connectivity
- App available on the stores for Android and iOS: SmartLife
- For 3-speed fan coil units
- For 2-pipe and 4-pipe systems
- Window contact input
- Water probe inlet
- Room temperature sensor
- Operating mode management
- Automatic changeover from cooling to heating mode
- Weekly scheduling (App only)

## Airmust P

Wi-Fi touch-screen controller for wall-mounted installation

- LCD display with five touch function keys
- Power supply 230V
- Maximum current: 5 A
- Thermostat function included
- Modbus
- 2.4G Wi-Fi connectivity
- App available on the stores for **Android and iOS: SmartLife**
- For 3-speed fan coil units
- For 2-pipe and 4-pipe systems
- Window contact input
- Water probe inlet
- Room temperature sensor
- Operating mode management
- Automatic changeover from cooling to heating mode
- Weekly scheduling (App only)

# Grimper Fan

## Ultra-slim fan coil unit

0.9 kW÷3.4 kW

The 12cm thick Grimper Fan range is 10% thinner than its competitors in the slim segment.

Il pannello **hardened glass front** is interchangeable on both sides to allow piping to be connected on the left/right side without additional operation.

Una a feature that distinguishes the range is the **assenza front intake grilles**, thanks to the innovative ventilation system that improves battery performance when working at negative pressure.

Tutti the models are equipped with **ventilatori EC**, which improves quietness ensuring a noise level of less than **20 dB(A)**.

The absence of front grilles allows for versatile Grimper Fan installation even in the tightest spaces.

The MSL and VSL models are compatible with 2- and 4-pipe installations, while the BSL model is compatible with 2-pipe installations.

Compleanno the range i **filtri stainless steel pleated** with unlimited life, the **ventilatore aluminum tangential** and an included infrared **telecomando** (BSL, MSL models).

The entire Grimper Fan range offers simple and intuitive management thanks to the use of a touch screen control wire (accessory), and a convenient dedicated app. It is possible to manage one or more connected units, both in residential and commercial settings.

La the range is made up of three models:

### Grimper Fan MSL

High-wall installation

### Grimper Fan VSL

Floor or ceiling installation

### Grimper Fan BSL

Bathroom installation

## Accessories

### Supplied separately, common to the range

- **STSL:** Minimum water temperature sensor

### Exclusive accessories for VSL model

- **2V2VSL:** 2-way straight valve kit with microswitch for VSL 09-27
- **2V2VSL34:** 2-way straight valve kit with microswitch for VSL 34
- **3V2VSL:** 3-way bypass valve kit with microswitch, 2-pipe, for VSL 09-27
- **3V2VSL34:** 3-way bypass valve kit with microswitch, 2-pipe, for VSL 34
- **3V4VSL:** 3-way bypass valve kit with micro switch, 4-pipe, for VSL
- **PEP09:** Rear aesthetic panel VSL 09
- **PEP18:** Rear aesthetic panel VSL 18
- **PEP27:** Rear aesthetic panel VSL 27
- **PEP34:** Rear aesthetic panel VSL 34
- **P-VSL:** Floor anchoring feet for VSL

- **VASL09:** Tray for horizontal installation VSL 09
- **VASL18:** Drip tray for horizontal installation VSL 18
- **VASL27:** Drip tray for horizontal installation VSL 27
- **VASL34:** Drip tray for horizontal installation VSL 34

#### Exclusive accessories for MSL model

- **2V2MSL:** 2-way straight valve kit with microswitch for MSL 12-17
- **2V2MSL25:** 2-way straight valve kit for MSL 25
- **3V2MSL:** 3-way bypass valve kit, 2-pipe, for MSL 12-17
- **3V2MSL25:** 3-way bypass valve kit, 2-pipe, for MSL 25

#### Exclusive accessories for BSL model

- **2V2BSL:** 2-way straight valve kit
- **3V2BSL:** 2-pipe 3-way bypass valve kit

# VE: VMI, VMF, OMP, OMI

Fan coil unit with AC or brushless DC motor, complete with cabinet

1.4 kW÷9.49 kW

- Structure in galvanized sheet metal with pre-painted casing and ABS components, complete with thermal and acoustic insulation.
- Complete with regenerable filter.
- Standard gravity-drain condensate collection tray (**for horizontal units only**).
- Six-speed centrifugal fans, three of which are connected in the standard configuration (**no MB**).
- Three-row heat exchange coils with copper tubes and aluminum fins featuring a hydrophilic surface treatment for rapid condensate drainage.
- The installation of valve kits is recommended for every type of system.

## S version

- Version with silenced motor, reduced condenser
- Thermal and acoustic insulation with reinforced anti-vibration system

## MB version

- Brushless motor
- Ventilation modulation 0-100%

## Version 4

- Version with second hydronic coil
- For 4-pipe systems
- Additional coil for heating only

## Configurations

VMI: Vertical unit with bottom return air

OMP: Horizontal rear return air

VMF: Vertical unit with front air return

OMI: Horizontal unit, bottom return air

## Versions

### Standard

- VE VMI: Vertical, bottom return air
- VE VMF: Vertical front return
- VE OMP: Horizontal unit with rear return air
- VE OMI: Horizontal bottom return

### Muted

- VE VMI S: Vertical unit with bottom return, soundproofed
- VE VMF S: Vertical, front return, soundproofed
- VE OMP S: Horizontal with rear intake, soundproofed
- VE OMI S: Horizontal unit with bottom return, soundproofed

### Standard with Brushless Motor

- VE VMI MB: Vertical, bottom return with MB
- VE VMF MB: Vertical front return with MB
- VE OMP MB: Horizontal rear return with MB
- VE OMI MB: Horizontal unit with bottom return and MB

### Silenced with brushless motor

- VE VMI S MB: Vertical unit with bottom return, soundproofed, with MB
- VE VMF S MB: Vertical unit, bottom return, soundproofed with MB
- VE OMP S MB: Horizontal unit with rear intake, soundproofed, with MB
- VE OMI S MB: Horizontal unit with bottom return, soundproofed, with MB

Available in a 4-pipe version. Refer to the price list for the codes.

Standard VE with left-hand connection. When ordering, it is possible to request connections on the right-hand side.

## Accessories

	P	Feet (supplied separately)		PCPB	Middle rear closing panel in pre-painted sheet metal
	PCPF	Lower rear closing panel in pre-painted sheet metal		PCB	Lower closure panel without grille in pre-painted sheet metal
	PMP1	Condensate pump (maximum water flow rate 8 l/h at 0 m.w.c., water flow rate 6.5 l/h at 1 m.w.c., water flow rate 4 l/h at 3 m.w.c., water flow rate 0 l/h at 6 m.w.c.) equipped with an alarm contact 8A@250V (suitable for all VERTICAL versions)		PMP2	Condensate pump (maximum water flow rate 8 l/h at 0 m.w.c., water flow rate 6.5 l/h at 1 m.w.c., water flow rate 4 l/h at 3 m.w.c., water flow rate 0 l/h at 6 m.w.c.) equipped with 8A@250V alarm contact (suitable for all HORIZONTAL versions).
	VA	Auxiliary drip tray for vertical versions (included with horizontal versions)		CVC	Onboard electronic control 230Vac with OFF/Summer/Winter + 3 fan speeds + thermostat with/without valves (including "Mammut" MOR terminal block)
	CVA	Unit-mounted 3-speed control (including "Mammut" MOR terminal block).		CBB	On-unit controller for brushless motor, 2/4-pipe management with/without valves ("Mammut" MOR terminal block included). Compatible with TMB.
	CVB	On-board 3-speed control with summer/winter selector and room thermostat ("Mammut" MOR terminal block included). Compatible with TMB.		CVD1	On-board microprocessor control 230Vac + 2/4-pipe management with/without valves (including "Mammut" MOR terminal block). Compatible with TMB.
	TMB	Low-limit bimetal thermostat: allows the automatic shutdown of ventilation if the temperature of the water entering the coil falls below 32°C in heating mode (winter). Compatible with CRA, CVC, CVA, CBB, CVB, CVD1.		SND-W4	Water temperature probe (NTC type, 4700 Ohm @ 25°C) with adjustable minimum setpoint, 1m cable length. Alternative to TMB thermostat, compatible with CBB and CVD1.
	SDI.4 X3A	4-output relay board. Suitable for controlling up to 4 three-speed motors. For AC motors only. Maximum rating: 4 x 3 A 230 Vac.		MOR	"Mammut"-type terminal block included when purchasing the fan coil unit complete with on-board controller. Must be ordered separately for wall-mounted controllers.
	2V2	2-way valves for 2-pipe systems, with 230V actuator		3V2	3-way valves for 2-pipe system, with 230V actuator
	2V4	2-way valves for 4-pipe system, with 230V actuator		3V4	3-way valves for 4-pipe systems, with 230V actuator
	TEL	System for remote-control management. Main board + air probe + water probe + IR receiver + remote control (management of 2/4-pipe systems, with/without valves). Fan: 7A-230Vac. Valves: 2A-230Vac. ("Mammut" MOR terminal block included).

Water connections on the left side

Note: Output and air flow rates are given at a static pressure of 0 Pa. For different available static pressures, refer to the air flow variation diagrams.

\* For the remaining technical data, refer to the product manual.

\*\* Data referring only to the 2-pipe version. For other versions, please refer to the product manual.

(1) Inlet air temperature: 27°C d.b. / 19,5°C w.b.

Water inlet/outlet temperature: 7°C / 12°C

(2) Inlet air temperature: 20°C d.b.

Water inlet/outlet temperature: 45°C / 40°C

(3) Inlet air temperature: 20°C d.b.

Water inlet/outlet temperature: 70°C / 60°C

(4) At a distance of 2 m and with a reverberation time of 0.5 s.

(5) With 3 VDC input signal

(\*) Maximum speed

# VE: VII, VIF, OIP, OII

Ductable/built-in fan coil unit with AC or DC brushless motor

1.4 kW÷10.7 kW

- Galvanized sheet metal structure, complete with insulation.
- Complete with regenerable filter.
- Standard natural-drain condensate collection tray (for horizontal units only).
- Six-speed centrifugal fans, three of which are connected in the standard configuration (no MB).
- Three-row heat exchange coils with copper tubes and aluminum fins featuring a hydrophilic surface treatment for rapid condensate drainage.
- The installation of valve kits is recommended for every type of system.

## S version

- Version with silenced motor, reduced capacitor.
- Thermal and acoustic insulation with reinforced anti-vibration system

## MB version

- Brushless motor
- Ventilation modulation 0-100%

## Version 4

- Version with second hydronic coil

- For 4-pipe systems
- Additional coil for heating only

## P version

- Single-phase AC squirrel-cage asynchronous electric motor
- Thermal protection TH (Klixon)
- Run capacitor always engaged
- 4 poles, IP42, Class B, double insulation, 230Vac-1Ph-50/60Hz

## Configurations

VII: Vertical built-in unit with bottom air return

OIP: Horizontal recessed unit with rear return air intake

VIF: Vertical built-in unit with front return air intake

OII: Horizontal built-in unit with bottom return air intake

## Versions

### Standard

- **VE VII**: Vertical built-in unit with bottom air return
- **VE VIF**: Vertical built-in unit with front return air intake
- **VE OIP**: Horizontal concealed units with rear return air intake
- **VE OII**: Horizontal concealed units with bottom return air intake

### Enhanced

- **VE VII P**: Enhanced recessed vertical unit with bottom return air
- **VE VIF P**: Enhanced vertical recessed unit with front return air
- **VE OIP P**: Horizontal recessed units with rear return, enhanced
- **VE OII P**: Horizontal ducted units, enhanced lower return

### Enhanced with Brushless Motor

- **VE VII P MB**: Vertical built-in unit with enhanced bottom return and MB
- **VE VIF P MB**: Enhanced built-in vertical unit with front return, with MB
- **VE OIP P MB**: Recessed horizontal rear return, enhanced with MB
- **VE OII P MB**: Horizontal ducted units with bottom return, enhanced with MB

### Standard with Brushless Motor

- **VE VII MB**: Recessed vertical unit with bottom return, with MB
- **VE VIF MB**: Vertical concealed front-return unit with MB
- **VE OIP MB**: Horizontal concealed units with rear return, with MB
- **VE OII MB**: Horizontal ducted concealed units with bottom return air and MB

### Muted

- **VE VII S**: Vertical built-in unit, bottom return, soundproofed
- **VE VIF S**: Vertical built-in front return, soundproofed
- **VE OIP S**: Horizontal recessed rear-return silenced units
- **VE OII S**: Horizontal ducted concealed units with bottom air return, soundproofed

### Silenced with brushless motor

- **VE VII S MB**: Vertical built-in unit with lower return, soundproofed, with MB
- **VE VIF S MB**: Vertical built-in front-return silenced unit with MB
- **VE OIP S MB**: Horizontal built-in rear return silenced unit with MB
- **VE OII S MB**: Horizontal concealed unit, bottom return, soundproofed, with MB

Available in a 4-pipe version. Refer to the price list for the codes.

Standard VE with left-hand connection. When ordering, it is possible to request connections on the right-hand side.

## Accessories

	PA	Suction plenum with circular connections	Size	13/23 33/43 53/63 73/83 93/103	
	PM	Supply plenum with circular connections	No. of connections with concentric collars Ø 200/180/160 mm	1 2 2 3 4	
	P1	Aesthetic panel in pre-painted sheet metal complete with intake and supply grille.		P2	Aesthetic panel in pre-painted sheet metal complete with supply and return air grille, equipped with inspection doors for access to controls.
	PMI	90° supply air plenum		FTI	Preparation frame in galvanized sheet metal. Suitable for creating the installation recess.
	PMP1	Condensate pump (maximum water flow rate 8 l/h at 0 m.w.c., water flow rate 6.5 l/h at 1 m.w.c., water flow rate 4 l/h at 3 m.w.c., water flow rate 0 l/h at 6 m.w.c.) equipped with an alarm contact 8A@250V (suitable for all VERTICAL versions)		PMP2	Condensate pump (maximum water flow rate 8 l/h at 0 m.w.c., water flow rate 6.5 l/h at 1 m.w.c., water flow rate 4 l/h at 3 m.w.c., water flow rate 0 l/h at 6 m.w.c.) equipped with 8A@250V alarm contact (suitable for all HORIZONTAL versions).
	TMB	Low-limit bimetal thermostat: allows the automatic shutdown of ventilation if the temperature of the water entering the coil falls below 32°C in heating mode (winter). Compatible with CRA, CVC, CVA, CBB, CVB, CVD1.		SND-W4	Water temperature probe (NTC type, 4700 Ohm @ 25°C) with adjustable minimum setpoint, 1 m cable length. Alternative to TMB thermostat, compatible with CBB and CVD1.
	SDI.4 X3A	4-output relay board. Suitable for controlling up to 4 three-speed motors. For AC motors only. Maximum rating: 4 x 3 A 230 Vac.		MOR	"Mammut"-type terminal block included when purchasing the fan coil unit complete with on-board controller. Must be ordered separately for wall-mounted controllers.
	2V2	2-way valves for 2-pipe systems, with 230V actuator		3V2	3-way valves for 2-pipe system, with 230V actuator
	2V4	2-way valves for 4-pipe system, with 230V actuator		3V4	3-way valves for 4-pipe systems, with 230V actuator
	TEL	System for remote-control management. Main board + air probe + water probe + IR receiver + remote control (management of 2/4-pipe systems, with/without valves). Fan: 7A-230Vac. Valves: 2A-230Vac. ("Mammut" MOR terminal block included).			

For vertical VII/VIF and horizontal OIP/OII versions in sizes 13, 23, 33 and 43, the EC motor electronic board is mounted externally on the short side of the unit.

For the wired controller price lists, refer to the pages at the beginning of the chapter.

# MI A3

## Hydronic wall panels

2.7 kW÷4.4 kW

Designed to fully meet efficiency, low-noise, and aesthetic requirements. The microprocessor control ensures precise comfort in the room. Three-way valve installed on board the unit. ABS casing with high mechanical strength and excellent ageing resistance; DC brushless fan motor; water coil with large heat exchange surface equipped with air vent valve and condensate drain; horizontal fins and independent vertically adjustable deflectors; complete function management via LCD remote control; cooling and heating operation with three fan speeds plus Auto mode. Manual restart function and Timer function.

### As standard:

Three-way 230 V diverter valve with compact-type electric actuator, normally closed and equipped with protective cover, air bleed valve, LCD remote control, volt-free contact for remote ON-OFF, ModBus input, condensate collection tray and drain.

### Limit Switch Micro Switch

The unit is equipped with a limit micro switch installed on the three-way diverter valve. This micro switch is wired to a dedicated terminal block from which the signal can be used for various purposes. In particular, this volt-free contact is useful for implementing system automation functions.

## Accessories

- **WGC8:** LAN gateway centralizer for remote management via App
- **WRC11:** Compact multifunction wired controller
- **WRC16:** Allows control of up to 16 indoor units using a single wired controller via the XYE ports.

## Hydronic DC brushless cassettes

2.0 kW÷6.1 kW

MAXA hydronic cassettes with DC brushless motor are designed to fully meet the efficiency, low-noise and aesthetic requirements demanded by the market. The microprocessor control ensures precise comfort in the room. The ModBus input allows quick integration with external BMS systems.

The compact dimensions meet installation needs in false ceilings thanks to the reduced sizes of 57 x 57 cm or 84 x 84 cm in the higher-capacity versions.

Provision for local adjacent air supply (size 60 only) and for fresh air intake (all sizes).

### Unit composition:

- High-efficiency finned coils with low pressure drops.
- Internal closed-cell insulation to minimize thermal loss and acoustic emission.
- Automatic flap movement.
- Condensate lift pump up to a maximum height of 500 mm, supplied as standard
- Modbus input

### Valve kit \*

- 3V2C: 3-way 2-pipe valve kit (HCA 22-29-35-42)
- 3V2CG: 3-way valve kit for 2-pipe systems (HCA 60)
- 3V4C: 3-way valve kit, 4-pipe system (HCA 22-35-50)
- 3V4CG: 4-pipe 3-way valve kit (HCA 60)

### Valve kit for systems with modulating pump

- 2V2C: 2-way valve kit for 2-pipe system (HCA 22-29-35-42)
- 2V2CG: 2-way valve kit, 2-pipe (HCA 60)
- 2V4C: 2-way 4-pipe valve kit (HCA 35-50)
- 2V4CG: 2-way valve kit, 4-pipe system (HCA 60)

### 3-way / 2-way valve kit \*

The kit consists of:

- No. 2 nipples / No. 1 nipple
- no. 4 O-rings / no. 2 O-rings
- No. 2 copper connection pipes / No. 1 copper connection pipe
- No. 1 three-way valve body – 4 ports / No. 1 two-way valve body – 2 ports
- No. 1 ON/OFF actuator / No. 1 ON/OFF actuator

\* For optimal operation it is always necessary to connect the water shut-off valve(s). In the absence of this device, room temperature control may not be guaranteed.

## Accessories

- **WGC8:** LAN gateway centralizer for remote management via App
- **WRC11:** Compact multifunction wired controller
- **WRC16:** Allows control of up to 16 indoor units using a single wired controller via the XYE ports.

### Versions

- **HCA1:** Cassette unit for 2-pipe system with electronic control and remote control
- **HCA1/4:** Cassette unit for 4-pipe system with electronic control and remote control

## Low-profile ductable units with asynchronous AC or brushless DC motor

6 kW÷20 kW

- Self-supporting structure in galvanized sheet metal with thermal and acoustic insulation (S version) or double 20 mm sandwich panel with pre-painted external sheet metal in white RAL 9002 (D version); equipped with ceiling/wall mounting holes, compact dimensions and optimized overall footprint.
- Double-slope condensate collection tray.
- High-efficiency heat exchange coil with copper tubes and aluminum fins, standard connections on the right-hand side.
- Double inlet centrifugal fans with plastic impellers featuring forward-curved, airfoil blades of large diameter, mounted on elastic supports and vibration dampers.
- The unit is equipped with an IP20 "Mammut"-type terminal block mounted outside the unit.
- The ductable units of the HCN series are supplied without an air filter. A wide range of filters is available in the accessories section.

### Configurations

**S-OIP**

Single recessed horizontal panel with rear return air intake

**S-OII**

Single recessed horizontal panel with bottom return

**D-OIP**

Double panel, horizontal recessed units with rear return air

**D-OII**

Double panel, horizontal recessed units with bottom return

### Versions

- **S-OIP:** Single concealed horizontal unit, rear return panel
- **D-OIP:** Double panel, horizontal recessed units with rear return air intake
- **S-OII:** Single recessed horizontal panel with bottom return
- **D-OII:** Double panel, horizontal recessed units with bottom return air

Standard with connection on the left. When ordering, it is possible to request connections on the right side.

### Nomenclature

When ordering, always specify the full model as shown in the example below.

For accessories, see the "HCN - HCNP Accessories" page.

# HCNP

Enhanced low-profile/flat ductable units with asynchronous AC or brushless DC motor

6.8 kW/12 kW

- Self-supporting structure in galvanized sheet metal with thermal and acoustic insulation (S version) or double 20 mm sandwich panel with pre-painted external sheet metal in white RAL 9002 (D version); equipped with ceiling/wall mounting holes, compact dimensions and optimized overall footprint.
- Double-slope condensate collection tray.
- High-efficiency heat exchange coil with copper tubes and aluminum fins, standard connections on the right-hand side.
- In the HCNP series, the double-inlet centrifugal fans with large-diameter plastic impellers featuring forward-curved, airfoil blades, mounted on elastic supports and vibration dampers, are equipped with higher-power motors to ensure higher available static pressures.
- The unit is equipped with an IP20 "Mammut"-type terminal block mounted outside the unit.
- The ductable units of the HCNP series are supplied without an air filter. A wide range of filters is available in the accessories section.

## Configurations

**S-OIP**

Single recessed horizontal panel with rear return air intake

**S-OII**

Single recessed horizontal panel with bottom return

**D-OIP**

Double panel, horizontal recessed units with rear return air

**D-OII**

Double panel, horizontal recessed units with bottom return

## Versions

- **S-OIP:** Single concealed horizontal unit, rear return panel
- **D-OIP:** Double panel, horizontal recessed units with rear return air intake
- **S-OII:** Single recessed horizontal panel with bottom return
- **D-OII:** Double panel, horizontal recessed units with bottom return air

Standard with connection on the left. When ordering, it is possible to request connections on the right side.

## Nomenclature

When ordering, always specify the full model as shown in the example below.

## HCN, HCNP accessories

### Factory-installed

TEL

System for remote control management. Main board + Air sensor + Water sensor + IR receiver + Remote control (management of 2/4-pipe systems, with/without valves). Fan: 7A-230Vac. Valves: 2A-230Vac.

BC

Auxiliary heating coil (for 4-pipe system)

MOR  
TMB

"Mammut"-type terminal block + minimum hot water temperature thermostat. Tset 32°C. All HCN units are supplied complete with a standard "Mammut"-type terminal block, without thermostat.

SFA-S  
SFA-D

Removable flat air filter (non-ductable) EU3 (S = single galvanized sheet metal, D = double pre-painted panel)

SND  
W4

Water temperature probe (NTC type 4700 Ohm@25°C) with adjustable minimum setpoint, 1m cable length. Alternative to TMB thermostat.

SFC-S  
SFC-D

EU3 ductable air filter section + flat air filter (S = single galvanized sheet metal, D = double pre-painted panel)

MB

Brushless motor with continuous 0-100% air flow modulation (0-10 Vdc control signal).

3VC-2,5  
3VC-4  
3VC-6

No. 1 three-way valve for heating coil (4-pipe system) with 230 V actuator

3V-2,5  
3V-4  
3V-6

No. 1 three-way valve for 2-pipe system with 230 V actuator

2VC-2,5  
2VC-4  
2VC-6

No. 1 two-way valve for heating coil (4-pipe system) with 230V actuator

2V-2,5  
2V-4  
2V-6

No. 1 two-way valve for 2-pipe system with 230 V actuator

SFD-S  
SFD-D

Ductable EU5 air filter section + corrugated HIGH-EFFICIENCY air filter H=100 mm (S=single galvanized sheet metal, D=double pre-painted panel)

Air pressure drop (clean/dirty filter)

HCN	60	75	86	103	130	150	136	170	200
SFA (Pa)	15/35	17/42	16/38	23/55	27/66	25/60	22/54	28/66	25/60
SFC (Pa)	15/35	17/42	16/38	23/55	27/66	25/60	22/54	28/66	25/60
SFD (Pa)	20/37	24/44	22/41	32/59	38/70	35/64	31/58	39/71	35/64

Note: each individual kit includes only one valve with actuator. In the case of a 4-pipe system, 2 valves are required. Example: with a 4-pipe ducted unit, in the case of 3-way valves, 230 V power supply: 3V + 3VC.

# HCNA

## Medium ductable units with AC asynchronous or DC brushless motor

7 kW÷68 kW

HCNA units are compact, freely configurable air handling units. You can choose from: 2 motor options (6-pole or brushless), 2 types of load-bearing casings (S or D), the 2-pipe/4-pipe version, and a wide range of compatible accessories.

The high flexibility, together with the wide output range, makes HCNA the winning solution that always allows you to find the right configuration for your specific needs.

### Construction Features

- Load-bearing structure in heavy-gauge galvanized sheet metal, resistant to rust, corrosion, chemicals, solvents, aliphatics, and alcohols.
- Self-supporting, removable panels; assembled with self-tapping screws for quick and easy inspection/maintenance. Load-bearing casings are available in "S" version (single panel) and "D" version (20 mm double sandwich panel with pre-painted outer sheet, white RAL 9002).
- The units are equipped with high-efficiency heat exchange coils (without air vent valves) made of copper tubes and aluminum fins.
- Standard connections on the right; on request and at an additional cost, connections on the left.
- The sections with cooling coil are equipped with a galvanized steel

condensate drain pan with external thermal insulation (on request, at extra cost, in AISI 304 stainless steel) with single slope to ensure optimal condensate drainage, complete with Ø30 mm drain connection.

- The standard electrical equipment includes: "Mammut"-type IP20 terminal blocks, with the terminal block mounted outside the unit on the same side as the hydraulic connections. For units with 2 motors, the installation of 3 relays or of the interface board is recommended.
- All standard versions are supplied with free intake and discharge openings, without any grille/guard and without an air filter.
- No. 2 motor drives: 6-pole or brushless

### Versions

- S: Recessed version - Single panel
- D: Exposed version - Double panel

Standard with connection on the left. When ordering, it is possible to request connections on the right side.

## Accessories

### Provided separately

	<b>MOR-TMB</b>	"Mammut"-type terminal block + minimum hot water temperature thermostat. Tset 32°C. All HCN units are supplied complete with a standard "Mammut"-type terminal block, without thermostat.		<b>PMP</b>	Condensate pump with integrated 0.5 L tank, equipped with 4A (250V) alarm contact
	<b>SDI.4X3A</b>	Board with 4 outputs at 3A (suitable for controlling up to 4 three-speed motors at 3A; e.g. 4 small fan coils).		<b>SDI.2X10A</b>	Board with 2 x 10A outputs (suitable for controlling up to 2 three-speed 10A motors; e.g. 1 large unit with 2 motors).
	<b>PFT-S</b> <b>PFT-D</b>	Ductable air filter section + EU7 pocket air filter, H = 400 mm. VERY HIGH EFFICIENCY (S = single galvanized sheet metal, D = double pre-painted panel)		<b>P2S-S</b> <b>P2S-D</b>	Closed section + 2 balancing/adjustment dampers (1 lower and 1 rear). Dampers without actuators, prepared for manual control or motorization. (S = single galvanized sheet metal, D = double pre-painted panel)
	<b>PMA-S</b> <b>PMA-D</b>	Outdoor air (0–33%) / return air (100–67%) mixing section (S=single galvanized sheet metal, D=double pre-painted panel)		<b>MS</b>	"230 Vac on/off" servomotor for air damper
	<b>P90-S</b> <b>P90-D</b>	90° Section (S = single galvanized sheet metal, D = double pre-painted panel)		<b>PCR-S</b> <b>PCR-D</b>	Sheet metal section with circular "Ø" connections, internally insulated (S = single galvanized sheet metal, D = double pre-painted panel)
	<b>PSL-S</b> <b>PSL-D</b>	Labyrinth silencer section, suitable for both intake and supply air openings (S = single galvanized sheet metal, D = double pre-painted panel).			

### Coil characteristics

	HCNA	71	117	143	165	216	290	240	293	330	565	685
Coil hot/cold	Kvs characteristic	2,33	3,78	4,58	5,65	6,65	9,00	8,22	9,91	11,04	16,36	19,73
	User-side connections DN	3/4" M	1" M	1" M	1" M	1"-1/4 M	1"-1/2 M	1"-1/4 M	1"-1/2 M	1"-1/2 M	1"-1/2 M (4R)	1"-1/2 M (4R)
Hot coil	Kvs characteristic	1,66	2,56	3,23	3,94	4,64	6,46	5,73	7,14	7,98	9,67	11,53
	User-side connections DN	3/4" M	1" M	1" M	1" M	1"-1/4 M	1"-1/4 M					

### Valve features

3-way valve	(1) Each individual kit includes only one control valve.		
3V / 3VM	DN 3/4" Kvs 2,8	DN 1" Kvs 5,2	DN 1 1/4" Kvs 13,0
2-way valve	(1) Each individual kit includes only one control valve.		
2V / 2VM	DN 3/4" Kvs 2,8	DN 1" Kvs 5,2	DN 1 1/4" Kvs 13,0

(1) Each individual valve kit is compatible with any size of HCNA unit.  
For on-off valves, it is recommended to use valves with a high Kvs value – for modulating valves, it is recommended to use valves with a Kvs value comparable to the Kvs of the coil.

The heating coil of the HCNA units (4-pipe system) uses the same type of valves.  
Therefore, in a 4-pipe system, 2 valves (2 codes) must be provided.

## Accessories

### Factory-installed

	<b>BC</b>	Auxiliary hot coil, 2 rows		<b>PFA-S</b>	Ductable air filter section + EU3 flat air filter (S = single galvanized sheet metal, D = double pre-painted panel)

(1) Entering air temperature: 27°C d.b. / 19°C w.b. – Entering/leaving water temperature: 7°C / 12°C  
Maximum speed

(2) Inlet air temp.: 20°C d.b. - Inlet/outlet water temp.: 70°C / 60°C Max speed

(3) Entering air temp.: 20°C d.b. – Entering/leaving water temp.: 45°C / 40°C Max speed

(4) Rated values measured with plenum chamber in accordance with AMCA 210-74 and duct plus orifice plate in accordance with CNR-UNI 10023 standards.

(6) In free field, at a distance of 3 m. Values calculated from sound power measured in a

reverberation room in accordance with ISO 3740 - ISO 3742.

(7) With AIRMUST 3VA1 and CRA accessories. For units equipped with a motor with electrical absorption greater than 3A, or with 2 motors, add 1 SDI.2x10A interface board.

(1)(2)(3)(4)(5) Nominal technical data referring to air flow rate (4) at maximum speed and unit with free discharge

(\*) DN = Nominal diameter; F = Female gas connections

## Dimensional Drawings

Dimensions in mm

\*WARNING: Check that the electrical current draw of the unit motors is compatible with the contact rating of the remote controls. If the electrical current draw is higher, or if the unit is equipped with two motors, it is recommended to use the SDI interface board.

(1) All HCNA units are supplied complete with standard "Mammut"-type terminal block, without thermostat.

(2) Each control panel can control only one unit (see "SDI" accessory).
